The mission of the National Institute on Disability, Independent Living, and Rehabilitation Research is to generate new knowledge and promote its effective use to improve the abilities of people with disabilities to perform activities of their choice in the community, and also to expand society’s capacity to provide full opportunities and accommodations for its citizens with disabilities.

2016 Program Directory for the National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR)

NIDILRR Mission

The mission of the National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR) is to generate new knowledge and promote its effective use to improve the abilities of people with disabilities to participate in community activities of their choice, and also to enhance society’s capacity to provide full opportunities and accommodations for its citizens with disabilities. NIDILRR funds comprehensive and coordinated programs of research and related activities to assist in the achievement of the full inclusion, social integration, employment, and independent living of individuals of all ages, with all types and degrees of disability including low-incidence disability.

With the passage of the Workforce Innovation and Opportunity Act (WIOA) in July, 2014, the National Institute on Disability and Rehabilitation Research (NIDRR) was renamed to the National Institute on Disability, Independent Living, and Rehabilitation Research (NIDILRR) and moved from the Department of Education to the Administration for Community Living at the Department of Health and Human Services.

This edition of the NIDILRR Program Directory lists all projects funded by NIDILRR during the 2016 fiscal year.

NIDILRR’s Research Programs/Funding Mechanisms

NIDILRR is committed to maintaining its focus on practical application of research and development; knowledge translation; and capacity building as strategic areas to improve the lives of individuals with disabilities and their families. Under the 2013-2017 Long Range Plan, NIDILRR supports a wide range of research, development, and other related activities aimed at improving long-term outcomes in health and function, employment, and community living and participation, NIDILRR’s Long-Range Plan for 2013-2017 was published in the Federal Register in April 2013. To download a copy, go to https://federalregister.gov/a/2013-07879.

The majority of NIDILRR grantees are universities or organizations of rehabilitation or related services. NIDILRR makes awards through several program mechanisms including ADA National Network Projects, Advanced Rehabilitation Research Training Projects, Disability and Rehabilitation Research Projects, Mary E. Switzer Research Fellowships, Model Systems, NIDILRR Contracts, Rehabilitation Engineering Research Centers, Rehabilitation Research and Training Centers, and Small Business Innovation Research. Program descriptions are provided below.

ADA National Network Projects

NIDILRR funds the ADA National Network to provide information, training, and technical assistance related to the Americans with Disabilities Act (ADA) to any persons or entities that have rights and responsibilities under the ADA, as well as conducting ADA-related research. Presently, ten ADA regional centers and one ADA collaborative research center are funded under this program. Beginning in 2011, NIDILRR also funded an ADA Network Knowledge Translation (ADA KT) Center to support knowledge translation activities of all ADA National Network centers.
Advanced Rehabilitation Research Training Projects

The Advanced Rehabilitation Research Training (ARRT) Program provides research training and experience at an advanced level to individuals with doctorates, or similar advanced degrees, who have clinical or other relevant experience. ARRT projects provide training to rehabilitation researchers, including researchers with disabilities, with particular attention to research areas that support the implementation and objectives of the Rehabilitation Act of 1973, as amended (Act), and improve the effectiveness of services authorized under the Act.

Grants are made to institutions to recruit qualified persons who will receive a training program that includes didactic and classroom instruction, is multidisciplinary, emphasizes scientific research methodology, and may involve collaboration among institutions.

Disability and Rehabilitation Research Projects

The Disability and Rehabilitation Research Projects (DRRP) program funds projects that include a range of activities including research, demonstration, training, knowledge translation, and technical assistance. These projects may develop methods, procedures, and rehabilitation technology to assist in achieving the full inclusion and integration into society, employment, independent living, family support, and economic and social self-sufficiency of individuals with disabilities, especially individuals with the most significant disabilities, or to improve the effectiveness of services authorized under the Rehabilitation Act.

Mary E. Switzer Research Fellowships

The Research Fellowships, named for the late Mary E. Switzer, give individual researchers the opportunity to develop new ideas and gain research experience. There are two levels of fellowships: Distinguished Fellowships and Merit Fellowships. Distinguished Fellowships go to individuals who have seven or more years of research experience in subject areas, methods, or techniques relevant to rehabilitation research. The individuals must have a doctorate, other terminal degree, or comparable academic qualifications. Merit Fellowships are given to individuals who have either advanced professional training or independent study experience in an area directly pertinent to disability and rehabilitation but who do not meet the qualifications for Distinguished, usually because they are in earlier stages of their careers. Both fellowship levels support one year of independent research activities.

Model Systems

NIDILRR administers Model Systems programs for persons with spinal cord injuries, burn injuries, and traumatic brain injuries. The Model Systems establish innovative projects for the delivery, demonstration, and evaluation of comprehensive medical, vocational, and other rehabilitation services. The work of the Model Systems begins at the point of injury and ends with successful re-entry into full community life. These projects collect and contribute data on patient characteristics, diagnoses, causes of injury, interventions, outcomes, and costs to a uniform national database; conduct research, both independently and collaboratively with other Model System centers; and coordinate research efforts with other related grant recipients. Beginning in 2006, NIDILRR funded a Model Systems Knowledge Translation Center (MSKTC) to support knowledge translation activities of all three Model Systems.
NIDILRR Contracts

Through its contracts, NIDILRR seeks improved methods, systems, products, and practices to enhance its work. The contracts are for specific activities related to management, research, evaluation, and information dissemination.

Rehabilitation Engineering Research Centers

Rehabilitation Engineering Research Centers (RERCs) conduct programs of advanced research of an engineering or technical nature designed to apply advanced technology, scientific achievement, and psychological and social knowledge to solve rehabilitation problems and remove environmental barriers. Each center is affiliated with one or more institutions of higher education or nonprofit organizations. Involved at both the individual and systems levels, RERCs seek to find and evaluate the newest technologies, products, and methods that ultimately can benefit the independence of persons with disabilities. The work of the RERCs also includes the universal design of environments for all people of all ages. The centers also exchange technical and engineering information worldwide and engage in technology transfer activities to maximize the use of new technology to produce end-user products, both commercialized and non-commercialized, and make them readily available for public consumption. Since 2008, NIDILRR has funded the Knowledge Translation for Technology Transfer (KT4TT) Center to assist RERC grantees in their technology transfer efforts.

Rehabilitation Research and Training Centers

NIDILRR’s Rehabilitation Research and Training Centers (RRTCs) conduct advanced, coordinated, and integrated programs of research targeted toward the production of new knowledge, which may improve rehabilitation methodology and service delivery systems, alleviate or stabilize disabling conditions, or promote maximum social and economic independence for persons with disabilities. Operated in collaboration with institutions of higher education or providers of rehabilitation or other appropriate services, RRTCs serve as centers of national excellence in rehabilitation research. Also, they are national or regional resources for research-based information for individuals with disabilities and the parents, family members, guardians, advocates, or authorized representatives of the individuals. These centers also conduct related training programs, including graduate, pre-service and in-service training. The centers also disseminate and promote the utilization of research findings.

Small Business Innovation Research

The purpose of the Small Business Innovation Research (SBIR) program is to stimulate technological innovation in the private sector, strengthen the role of small business in meeting Federal research or research and development needs, increase the commercial application of Federally-supported research results, and improve the return on investment from Federally-funded research for economic and social benefits to the Nation. SBIR grants at NIDILRR help support the production of new assistive and rehabilitation technology. NIDILRR supports Phase I and Phase II SBIR projects. Phase I grants support research that will contribute to proving the scientific or technical feasibility of the approach, concept, or product identified in the proposal. Phase II grants expand on the results of Phase I projects, allowing
these businesses to pursue further development and to begin to explore the potential for commercialization.

Active grants awarded prior to October 2014 will include grant numbers as assigned by both the Department of Education and the Administration for Community Living. Grants awarded after October 2014 will only include the ACL-assigned grant number.

**NARIC and the NIDILRR Program Directory**

The Program Directory is compiled by the National Rehabilitation Information Center (NARIC). NARIC functions as a specialized library, providing the public with disability- and rehabilitation-related information and services to help locate those materials and resources. Since 1977, NARIC has been the primary source of rehabilitation and disability information about, and information generated by, NIDILRR-funded projects.

NARIC also produces REHABDATA, an index of disability and rehabilitation literature produced by NIDILRR grantees as well as commercial publishers. Grantees submit copies of NIDILRR-supported research products to NARIC and they are added to the reference collection and REHABDATA database. Information about holdings is available online at http://www.naric.com.

Neither NARIC nor NIDILRR assumes liability for the Directory’s contents or the use thereof. NARIC does not evaluate or certify the programs or products of the organizations listed in the Directory.

This Directory is not intended for use as a fiscal document to show how NIDILRR funds are allocated; its purpose is to display the range of programs that NIDILRR supports. This listing is current as of December 31, 2016. The directory includes some projects that will be officially complete by the directory’s publication date.

NARIC operates under Administration for Community Living contract GS-06F-0726Z.
Employment

As stated in NIDILRR’s Long-Range Plan for 2013-2017, employment and earnings are essential to independence, self-determination, and contribution to society. NIDILRR’s employment research focuses on the lifelong challenges to and opportunities presented by transitions in employment experienced by people with disabilities. Employment research addresses methods to integrate the unique needs of employers and disability populations to improve employment outcomes across the life span. NIDILRR supports centers and projects that address unemployment, underemployment, and unnecessary dependence on public benefits. The research and development activities in this domain examine employment policies and practices, vocational rehabilitation services, and technologies and accommodations that contribute to improved employment and career outcomes for individuals with disabilities.

RRRTC on VR Practices for Youth and Young Adults

TransCen, Inc.
401 North Washington Street
Rockville, MD 20850
lowens@transcen.org
vrpracticesandyouth.org

Principal Investigator: Laura Owens, PhD; Ellen Fabian, PhD (University of Maryland); Todd Honeycutt, PhD (Mathematica Policy Research); 301/424-2002; 301/405-2872; 609/945-3397
Public Contact: Laura Owens, PhD 301/424-2002; Fax: 301/251-3762

Project Number: 90RT5034 (Formerly H133B140043)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $875,000; FY 18 $875,000

Abstract: The RRRTC on Vocational Rehabilitation (VR) Practices for Youth and Young Adults provides a comprehensive, balanced, and rigorous view of the strategies, methodologies, and models of VR service for youth and young adults (Y&YA) with disabilities in the United States. The Center’s activities provide knowledge for ongoing academic analysis, policy development, and in-the-field practice by: (1) analyzing the association between individual and agency level factors and outcomes of transition-age youth seeking VR services; (2) designing, implementing, and testing a data analytic system to support VR agency learning and continuous improvement of service delivery to transitioning youth; (3) evaluating the efficacy and utility of a comprehensive VR-led transition program; (4) identifying characteristics and strategies used by highly effective VR staff in order to develop and test a training resource for promoting highly effective performance; (5) analyzing the role and impact of VR services in inclusive higher education for students with significant disabilities; (6) producing robust and extensive publications of research findings; (7) compiling, creating, and disseminating information on the Center’s research that is accessible and useful to interested stakeholders; and (8) providing training and technical assistance in order to address gaps in knowledge and practice. The Center is a partnership of TransCen, Inc.; University of Maryland-College Park; Mathematica Policy Research, Inc.; and the Institute for Community Inclusion at the University of Massachusetts-Boston, as well as the Council of State Administrators of Vocational Rehabilitation (CSAVR) and other relevant stakeholders to provide a deeper understanding of the knowledge, policies, and practices that enable Y&YA to transition to successful employment and productive careers.

Principal Investigator: Susan Foley, PhD
Public Contact: 617/287-4317

Project Number: 90RT5016 (Formerly H133B120002)
Start Date: October 01, 2012
Length: 60 months

NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 12 $650,000; FY 13 $650,000; FY 14 $650,000; FY 15 $650,000; FY 16 $650,000

Abstract: This center produces strategies for assessing employer needs and expectations; develops strategic planning models that support state vocational rehabilitation (VR) agency efforts to anticipate and prepare for changing employer and labor market needs; identifies existing programs that may be useful to VR agencies; and produces methods for tracking, analyzing, and reacting to changing employer needs. Research, training, technical assistance, and dissemination activities build upon current knowledge of demand-side strategies and fill a knowledge gap on agency-level practices to address three main themes in improving VR responsiveness to employer needs: (1) integrating labor market and business relations data into business intelligence and strategic planning efforts in Alabama, (2) aligning just-in-time job training with industry needs to ameliorate middle skill labor shortages in Nebraska, and (3) testing an emerging and piloted model in four state VR agencies of “no-risk, low risk” dual customer job placement services created in Vermont. This project is a partnership with the Institute for Community Inclusion at the University of Massachusetts Boston, the Alabama Department of Rehabilitation Services, the Nebraska Vocational Rehabilitation, the Vermont Division of Vocational Rehabilitation, and the New England Council.

Project Number: 90RT5028 (Formerly H133B140026)
Start Date: October 01, 2014
Length: 60 months

NIDILRR Officer: Pimjai Sudsawad, ScD

NIDILRR Funding: FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $874,999; FY 18 $874,999

Abstract: The goal of this RRTC is to address the elements needed to bring integrated employment to scale for all adults with intellectual and developmental disabilities (I/DD). Research suggests that bringing individual and local successes in employment to scale requires an integrated approach that engages all stakeholders in addressing: individual and family expectations and knowledge; employment consultants’ ability to provide high quality individual employment services and supports; community rehabilitation providers’ effectiveness to rebalance resources and transform their organizations to a focus on integrated employment; and states’ effectiveness at implementing policies and practices that establish employment as the first priority across all service systems including vocational rehabilitation, education, and I/DD. The Center: (1) develops and tests a comprehensive information, outreach, and support framework for individuals and families; (2) assesses a cost-effective strategy for improving the implementation of employment support practices by integrating online training, data-based performance feedback, and facilitated peer supports; (3) develops and tests an evidence-based intervention to support organizational transformation and rebalancing across networks of community rehabilitation providers; and (4) analyzes state employment systems policies and practices and their relationship to individual outcomes at a multi-agency level and defines policies and practices of high-performing state employment systems. This project includes a cross-stakeholder network of advisors and seven organizational dissemination partners to extend the effectiveness and utilization of project findings and resources. Project partners include The Arc of the United States, the University of Minnesota, the National Association of State Directors of Developmental Disabilities Services, SABE, and APSE. Participation of a cross-stakeholder network of advisors and eight organizational dissemination partners extend the effectiveness and use of project findings and resources.
Rehabilitation Research and Training Center on Improving Employment Outcomes for Individuals with Psychiatric Disabilities

Principal Investigator: E. Sally Rogers, ScD; Marianne Farkas, ScD
Public Contact: 617/353-3549; Fax: 617/353-7700

Project Number: 90RT5029 (Formerly H133B140028)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 14 $499,596; FY 15 $574,991; FY 16 $574,956; FY 17 $574,959; FY 18 $574,965
Other Funding: FY 14 $375,400 (Substance Abuse and Mental Health Services Administration (SAMHSA)); FY 15 $375,400 (SAMHSA); FY 16 $375,400 (SAMHSA); FY 17 $375,400 (SAMHSA); FY 18 $375,400 (SAMHSA)

Abstract: The goal of this project is to improve employment outcomes through the development of technology; examination of individual and work environment factors associated with improved employment outcomes; and by investigating the effects of government practices, policies, and programs on employment outcomes for individuals with psychiatric disabilities, including those from traditionally underserved groups. To achieve this goal, this project develops a National Resource Center (NRC) on Employment and Vocational Recovery to conduct training, provide technical assistance, and conduct dissemination activities to increase the utilization of research findings targeted to states seeking to implement evidence-based supported employment; to organizations delivering or planning to deliver employment services; and to individuals with psychiatric disabilities, families, employers, providers, administrators, and other key stakeholders. This project is a collaboration between the Center for Psychiatric Rehabilitation, Dartmouth Medical School Psychiatric Research Center, and other organizations from around the nation.

Public Contact: 508/856-8718; Fax: 508/856-8700

Project Number: 90RT5031 (Formerly H133B140040)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 14 $499,596; FY 15 $499,593; FY 16 $499,595; FY 17 $499,593; FY 18 $499,593
Other Funding: FY 14 $375,400 (Substance Abuse and Mental Health Services Administration (SAMHSA)); FY 15 $375,400 (SAMHSA); FY 16 $375,400 (SAMHSA); FY 17 $375,400 (SAMHSA); FY 18 $375,400 (SAMHSA)

Abstract: This project focuses on school-to-work transitions with an integrated research program examining this developmental stage for transition-age youth and young adults (Y&YAs) with serious mental health conditions (SMHCs). The Center develops and translates knowledge from state-of-the-art rigorous research on education and work in 14-30 year olds with SMHCs. Research is conducted in real-world settings in partnership with Y&YAs with lived experience and informed by family input to address three critical areas: (1) identifying the range of paths in the transition to employment and the factors that contribute to the variability in educational and working success of Y&YAs with SMHCs; (2) continuing to develop and test interventions with preliminary evidence of efficacy; and (3) continuing to examine the ways in which state vocational rehabilitation, child mental health, and adult mental health agencies can improve employment success within subpopulations of those vulnerable to poor transitions to employment (i.e., young parents and individuals with justice-system involvement). This fundamental research increases capacity-building for service providers, and the movement of findings into practice and policy. The Learning and Working During the Transition to Adulthood Rehabilitation Research and Training Center provides national leadership in this area and shares developing knowledge with key stakeholders including youth and young adults, their families, researchers, policymakers, and practitioners.
Employment for Individuals with Blindness or Other Visual Impairments

www.facebook.com/msu.nrtc
twitter.com/MSU_NRTC
www.ntac.blind.msstate.edu

Principal Investigator: Michele Capella McDonnall, PhD
Public Contact: 662/325-2001

Project Number: 90RT5040
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 15 $874,947; FY 16 $874,807; FY 17 $874,881; FY 18 $875,853; FY 19 $874,801

Abstract: This project conducts research that generates new knowledge about the efficacy of rehabilitation services and technology used to support employment outcomes for individuals who are blind or visually impaired (B/VI), utilizing multiple stages of research. Research and related training, technical assistance, and dissemination activities contribute to improving competitive employment outcomes for individuals who are B/VI, including subpopulations such as youth, persons who are deaf-blind (DB), and persons with combined traumatic brain injury (TBI) and B/VI. Project 1 is an intervention development project to create an app for parents of youth who are B/VI or DB and youth who are B/VI that will help them focus on the steps they need to take, starting early in the youth’s life, to obtain employment upon completion of their education, including a checklist of age-appropriate activities that should be accomplished to aid in the transition process. Project 2 is an intervention efficacy project that involves adding a guided job search component to an existing summer work experience program conducted by a vocational rehabilitation (VR) agency with youth in their local community. This modification is supported by research that indicates finding a job independently is associated with better employment outcomes later, whereas sponsored work activities are not beneficial. Project 3 evaluates the effectiveness of different approaches to a first meeting between a VR representative and an employer. This intervention efficacy project evaluates the ability of four different approaches to change attitudes and intent to hire. Project 4 implements and evaluates the effectiveness of an evidence-based approach to VR counselor training on working with businesses. Project 5 is an exploratory study, surveying with individuals with B/VI to identify factors that helped them retain their jobs and a survey with VR agencies to explore policies for
job retention cases. Analyses with RSA-911 and survey data explore job retention cases nationally and evaluates the impact of agency policies on consumer employment outcomes. Case studies provide more in-depth information. Project 6 is an exploratory study utilizing two large secondary databases to increase our knowledge about subpopulations (youth and adults who are DB, persons with combined TBI and B/VI) and the impacts on employment outcomes of changes associated with WIOA legislation.

Project Number: 90RT5037
Start Date: September 30, 2015
Length: 60 months

NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 15 $875,000; FY 16 $875,000; FY 17 $875,000; FY 18 $875,000; FY 19 $875,000

Abstract: The Rehabilitation Research and Training Center on Employment Policy and Measurement (EPM-RRTC) supports the disability and policy communities as they take on important policy issues, generating and translating new knowledge about disability employment policy and ways to measure the labor market experiences of people with disabilities. The Center conducts 11 research projects and 12 knowledge translation projects that involve a range of dissemination, training, and technical assistance activities. These research projects support the disability and policy communities in three priority areas by generating new knowledge about the interactions of public programs, assessing the potential impact of SSDI policy reform options, and developing and disseminating innovative, valid, and reliable methods of measuring employment outcomes. Dissemination projects promote access to timely and relevant information through monthly reports that track employment trends in a timely manner, a compendium of state-level policy variables, policy briefs, a journal volume compiling research findings around a unified theme, publications in peer-reviewed journals, and the Center website. Training projects improve the utilization of evidence-based information by increasing the capacity of end users to effectively utilize disability employment policy research and data through monthly webcasts designed to facilitate knowledge translation to practitioners, policy makers, and people with disabilities; a State-of-the-Science conference; presentations at scientific conferences; and a junior researcher training program. Lastly, technical assistance projects further build and cement the utilization of evidence-based information by providing technical assistance to policy and program stakeholders and information/referral services.

Principal Investigator: John O’Neill, PhD; Purvi Sevak, PhD
Public Contact: 973/324-8387; Fax: 973/324-8373

Project Number: 90RT5017 (Formerly H133B120005)
Start Date: October 01, 2012
Length: 36 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 12 $850,000; FY 13 $850,000; FY 14 $850,000; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 9/29/2017)

Abstract: This RRTC generates new knowledge regarding the economic disparities of individuals with disabilities and the role of individual characteristics, building upon evidence-based research that improves strategies and interventions for attaining better employment outcomes for the various subpopulations of people with disabilities. This project blends the social model of disability with labor economic theory, adopting the framework of the International Classification of Functioning, Disability and Health focusing on three research domains: health conditions, personal characteristics, and environmental characteristics. The first domain, health conditions, researches the physical and mental characteristics that underlie disability. The second domain researches personal characteristics including demographic characteristics, human capital (education and training), and social capital (an individual’s family, community, and employment relationships). The third domain researches environmental characteristics including accessibility, transportation, the local economy, public policies, and geography. This project conducts research in three phases: Phase 1 - reviewing existing literature and providing comprehensive review of the vocational rehabilitation and social science literature on facilitators and barriers to employment for persons with disabilities; Phase 2 - utilizing existing data from Phase 1 and data from disability-related public programs and national and international surveys to examine the geographic and individual variation within the data supporting identification of individual, social, economic, and environmental barriers and facilitators to employment; and Phase 3 - applying new data to design, implement, and analyze the National Survey on Disability and Employment.

NIDILRR Funding: FY 13 $873,811; FY 14 $862,741; FY 15 $871,087; FY 16 $874,918; FY 17 $871,129

Abstract: This project is developing and implementing five research studies that directly impact the employment outcomes of individuals with physical disabilities. These studies focus on: (1) technology that improves employment outcomes for individuals with physical disabilities; (2) individual and environmental factors associated with improved employment outcomes; (3) interventions that contribute to improved employment outcomes; (4) effects of government practices, policies, and programs on employment outcomes; and (5) practices and policies that contribute to the improved outcomes for transition-aged youth and young adults with physical disabilities. The activities of this project include: (1) conducting a mixed-method, quasi-experimental study to identify the barriers and facilitators of employment for individuals with physical disabilities and testing the effectiveness of specific knowledge translation strategies used by individuals with physical disabilities to promote the use of employment disability research findings; (2) conducting research on customized employment to identify evidence-based practices that will facilitate the employment of transition-age youth with physical disabilities; (3) conducting research on the employment of veterans with amputation conditions; (4) conducting research to evaluate demand-side employment and a toolkit for use by rehabilitation professionals; (5) studying successful employment and quality of work life after severe disability for individuals with multiple sclerosis and spinal cord injury; and (6) establishing and maintaining a National Resource Center for individuals with physical disabilities and their families that is guided by Rehabilitation Research and Training Center research. This project is a collaboration of Virginia Commonwealth University, the Medical University of South Carolina, and the University of Wisconsin-Madison.

Start Date: September 30, 2016  
Length: 60 months  
NIDILRR Officer: Leslie J. Caplan, PhD  
NIDILRR Funding: FY 16 $874,220; FY 17 $873,973; FY 18 $874,877; FY 19 $874,397; FY 20 $874,408

Abstract: The Rehabilitation Research and Training Center on Employer Practices Leading to Successful Employment Outcomes for Individuals with Disabilities provides needed information in employer practices that are associated with better employment outcomes for individuals with disabilities. The cornerstone of this research is a series of studies embedded in businesses to examine the business practices that facilitate the hiring and advancement of individuals with disabilities. These studies examine the complex interactions between a wide range of variables that directly impact the employment outcomes of people with disabilities. The researchers actively involve business professionals, including human resource professionals, hiring managers, and coworkers, in the design and implementation of the research, and resulting knowledge translation activities. Studies examine, in real time, the decision-making processes that frontline supervisors go through when deciding to hire, retain, or promote individuals with disabilities, to understand the factors that influence these important decisions. Employers share their diversity policies, employer practices, accommodation process, and factors that influence businesses to employ and retain workers with disabilities, as well as the characteristics of the businesses that employ individuals with significant disabilities. The VCU-RRTC works collaboratively with stakeholders in the design and implementation of the research by establishing a Business Advisory Board. Some of the key activities for the VCU-RRTC include establishing a National Resource Center that is related to the employment for people with disabilities and providing informational and technical assistance to stakeholder groups. This research is conducted in collaboration with the University of Wisconsin Madison and Bon Secours Virginia Health System.

Principal Investigator: Jon Sanford
Public Contact: 404/894-1413; Fax: 404/894-9320

Project Number: 90DP0049 (Formerly H133A120120)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 12 $499,962; FY 13 $499,875; FY 14 $499,928; FY 15 $499,972; FY 16 $499,954

Abstract: The goal of this project is to increase knowledge about, availability of, and access to universal design (UD) accommodations to enable employees with disabilities to participate fully in the workplace, enjoy enhanced employment outcomes, and have equal opportunities for advancement. To accomplish this goal, the specific aims of the research activities are to develop new tools to measure UD accommodation practices and workplace participation; utilize these tools to establish an evidence base for UD accommodations to improve work outcomes; and translate that evidence into practice. To accomplish these aims, the project: (1) develops and validates the Workplace Accommodation Rating System and Standards (WARSS), a set of standards and a new rating system for UD accommodations based on the Commercial Building Standards developed by IDEA Center for the Global Universal Design; (2) expands the scope of the Work RERC Workplace Participation Survey, originally developed and validated for workers who use wheelchairs in an office setting, to include workers with all types of limitations, including vision, hearing, mobility, dexterity, speech, and cognition in multiple work settings; (3) describes the relationship between employer accommodation practices and work outcomes; (4) identifies the salient UD accommodation practices that are associated with positive work outcomes for employees with disabilities; and (5) identifies needs and opportunities to develop and disseminate materials about accommodation policies and practices. The DRRP produces new tools for employers and rehabilitation professionals to measure UD and participation in a workplace, including standards for measuring UD in the workplace; an evidence base for UD accommodation practices; and educational and outreach materials in formats that are useful to and usable by employers, industry organizations, rehabilitation professionals, policymakers, and organizations that influence policy including employer practice guidelines, articles in industry trade journals, and evidence-based policy recommendations for policymakers.
Evaluating the Impact of a School-to-Work Collaborative on the Employment Outcomes of Transition-Aged Youth

Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 13 $471,327; FY 14 $474,403; FY 15 $474,678; FY 16 $474,314; FY 17 $474,729

Abstract: This project collaborates with state and local partners and the Indiana University’s Center on Community Living and Careers at the Indiana Institute on Disability and Community to evaluate the effects of a school-to-work collaborative on the employment outcomes of transition-age youth with disabilities. The goal of the Collaborative is to provide employment opportunities for transition-age youth by embedding employment resources into the school to focus on employment outcomes and reduce or eliminate duplication of services; specifically, a provider employment specialist who serves as a single point-of-contact representing a coalition of providers serving the Collaborative while overlapping supports with schools to ensure a coordinated and seamless system of transition. Five sites for the study are selected to implement the local collaborative and five additional sites are selected as the control group. Key elements of the local Collaborative include: a single point of contact, development of student personal profiles, self-determination/soft skill training, immersed internship, family training, and benefits counseling with asset development/financial literacy training. Each local Collaborative includes key stakeholders: local vocational rehabilitation counselors or supervisors, community employment/rehabilitation providers, school districts representatives, INSOURCE parent representative, and other representatives that are locally determined. Results from this study provide data for a replicable model both within Indiana and across the country enhancing the employment outcomes for transition-age youth.

Integrated Scaling Approach: A Model for Large Scale Implementation of Effective Interventions for Employment

Trustees of Boston University
Center for Psychiatric Rehabilitation
940 Commonwealth Avenue West
Boston, MA 02215
mfarkas@bu.edu

Principal Investigator: Marianne Farkas, ScD
Public Contact: 617/353-3549

Project Number: 90DP0096
Start Date: September 30, 2016
Length: 0 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 16 $499,984; FY 17 $499,412; FY 18 $499,799; FY 19 $499,844; FY 20 $499,765

Abstract: The goal of this project is to more efficiently expand delivery of effective employment interventions, by developing a comprehensive, integrated approach that increases the demand for and the supply of such practices, through interactive technology and personal contact. “Scaling up” evidence-based employment practices (EBP) involves increasing access to effective programs in order to benefit more people over time. Despite having effective employment practices for people with psychiatric disabilities, widespread implementation remains difficult due to factors such as the resource intensive methods traditionally used, negative stakeholder attitudes towards work for people with psychiatric disabilities and lack of knowledge about existing EBPs. This project focuses on two Development Stages (Proof of Concept and Proof of Product) through four objectives: (1) establishing the conceptual elements of an innovative approach for scaling up employment interventions, designed for people with psychiatric disabilities (Integrated Scaling Approach: ISA); (2) testing a working prototype for ISA; (3) evaluating the resulting product; and (4) transferring the technique for others to use in scaling up future effective employment interventions. Outcomes of this project include a better understanding of large scale implementation of new employment practices; more providers with increased skills in new employment practices across several states and more agencies with the capacity to embed such practices. Project products include: a systematic review of the scaling literature; scaling up of the two practices; a certificate program; two toolkits to promote positive messages about work for people with psychiatric disabilities; an ISA Handbook; and an evaluation of the approach itself and the application of these learnings to other sites, states, providers and stakeholders.

**Public Contact:** 603/448-0263  
**Project Number:** 90DP0052 (Formerly H133A120164)  
**Start Date:** October 01, 2012  
**Length:** 60 months  
**NIDILRR Officer:** Hugh Berry, EdD  
**NIDILRR Funding:** FY 12 $496,422; FY 13 $499,576; FY 14 $499,107; FY 15 $499,412; FY 16 $498,886

**Abstract:** This project develops a range of technology-based products as part of an overall platform, called the Individual Placement and Support (IPS) Management System, to enhance the availability, consumer-centeredness, service quality, expansion, effectiveness, and efficiency of vocational services for people with serious mental illness on a national scale. The IPS model of supported employment is firmly established as the most effective practice to help people with serious mental illness become employed and succeed as steady workers. The IPS Management System builds on existing technology and evidence-based components that are not yet computerized. It includes a variety of tools to help consumers, families, vocational rehabilitation counselors, employers, employment specialists, mental health teams, supervisors, and administrators. The tools are iteratively developed and tested for acceptability and usability using methods that have been empirically proven in the development of treatment technology. Examples of these tools include: consumer-empowering software to enable consumers to build their own career profiles and job plans, information on disability benefits and employment for families, IPS training for vocational rehabilitation counselors, information for employers on the advantages of hiring IPS participants, job development tracking systems for employment specialists, IPS training for mental health teams, and management systems for supervisors and administrators.
Manual and Training Program to Promote Career Development Among Transition Age Youth and Young Adults with Psychiatric Conditions

Rutgers, The State University of New Jersey
Department of Psychiatric Rehabilitation and Counseling Professions
1776 Raritan Road, Room 313
Scotch Plains, NJ 07076
mullenmi@shrp.rutgers.edu

Principal Investigator: Michelle G. Mullen-Gonzalez
Public Contact: 908/889-2513; Fax: 908/889-2701

Project Number: 90DP0063 (Formerly H133A130092)
Start Date: December 23, 2013
Length: 48 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 13 $499,954; FY 14 $499,145; FY 15 $499,951; FY 16 $499,998

Abstract: This project develops, evaluates, and implements an innovative career development intervention, Helping Youth on the Path to Employment (HYPE), a manual and training program to integrate Supported Education (SEd) with Supported Employment (SE) and other vocational services in order to adequately support transition-age youth and young adults (TAYYA) with psychiatric conditions in achieving self-sufficient lives. HYPE is a comprehensive, integrated career development intervention for TAYYA with psychiatric conditions that can be implemented across a variety of settings. A manualized model that is guided by a National Advisory Council (NAC) and Participatory Action Committee (PAC) consisting of young adults and youth with lived experiences is informed by the findings of four activities of the development program: (1) a scoping literature review; (2) an innovative practices survey; (3) qualitative interviews with TAYYA to learn about the practices that promote career development, obstacles commonly faced, and critical times for service delivery; and (4) activity synthesis and consensus conference where all activity findings are integrated and vetted through the NAC and PAC in order to reach consensus agreement regarding the critical features of career development for TAYYA. The manual addresses strategies for meeting common challenges such as cognitive deficits, substance abuse, and legal involvement, as well as how to integrate SE and SEd interventions that specifically target TAYYA. The manual also features a training materials section to prepare staff in providing career development services for young adults and youth. This project is a collaboration of the University of Medicine and Dentistry of New Jersey (UMDNJ) Department of Psychiatric Rehabilitation and Counseling Professions and the University of Massachusetts Medical School Transitions Research and Training Center.

The Diversity Partners Intervention: Moving the Disability Employment Needle Through Value Added Relationships Between Talent Acquisition Providers and the Business Community

Cornell University
201 Dolgen Hall
Ithaca, NY 14853-3901
ws283@cornell.edu

Principal Investigator: Wendy Strobel Gower
Public Contact: 607/255-6751; Fax: 607/255-2763

Project Number: 90DP0065 (Formerly H133A140011)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Shelley Reeves

NIDILRR Funding: FY 14 $499,999; FY 15 $499,999; FY 16 $499,999; FY 17 $499,999; FY 18 $499,999

Abstract: This project develops and evaluates the Diversity Partners Intervention (DPI) to augment the knowledge, skills, and behaviors of general placement professionals (GPPs) and disability placement professionals (DPPs) for the purpose of improving employment outcomes for people with disabilities. DPI prepares GPP and DPP provider organizations in the development of organizational practices and policies which support meaningful relationships with employers and aids in the development and testing of intervention tools designed to provide on-going support to placement professionals in their daily practice. The DPI enables placement professionals to build relationships with employers by adding value to employers’ efforts to hire and fully include employees with disabilities. Placement professionals improve their knowledge of best practice around all aspects of employing people with disabilities; strengthening their ability to engage employers around hiring and retaining employees with disabilities; and helping employers to build disability-inclusive organizational cultures and practices that support their on-going recruitment, hiring, retention, and career advancement of people with disabilities. The project also creates systems and tools to support national dissemination and broad adoption of these tools in provider organizations within the context of their work and their local communities.

Project Number: 90DP0062 (Formerly H133A130066)
Start Date: October 01, 2013
Length: 60 months

NIDILRR Funding: FY 13 $474,945; FY 14 $474,917; FY 15 $474,968; FY 16 $474,947; FY 17 $474,945

Abstract: Project Career is an inter-professional development project to improve the employment success of undergraduate college and university students with traumatic brain injury (TBI). This project develops, tests, and implements a technology-driven, long-term, and resource-rich individualized support program by merging assistive technology (AT) for cognition (e.g., Cognitive Support Technology [CST]) and a collection of vocational rehabilitation (VR) services and supports to improve career readiness and employment outcomes of civilian and veteran students with TBI participating in and graduating from postsecondary two- and four-year colleges and universities. In a collaborative venture, Kent State University, JBS International, Inc., West Virginia University, and Boston University implement this project, providing services and supports to a minimum of 150 civilian and veteran students with TBI at all stages of postsecondary education. iPads, provided to each participating student, are used as a CST device and as a virtual platform to provide coaching, education, counseling, and career mentoring services. Additional services include field-based internship placements, and support for post-graduation job placement. Guided by stakeholders including people with TBI, those in the allied health and rehabilitation professions, employers, and CST experts, the following full range of services and supports are included: (1) Comprehensive assessment and planning of (a) students’ needs, readiness, and preferences for CSTs to compensate for cognitive limitations, and (b) students’ vocational goals and preferences; (2) individualized CSTs targeted toward the needs and capabilities of each student; (3) training in the use of the iPad and the specific CSTs; (4) an electronic-mentoring (e-mentoring) program based on a peer support model; (5) individualized vocational case management services provided by Certified Rehabilitation Counselors; (6) assistance in securing field-based internships; (7) a resource-directed job placement and accommodation planning seminar focused on technology transfer, self-advocacy, and professional networking; and (8) post-graduation follow-along employment support provided by Certified Rehabilitation Counselors.

Project Number: 90DP0050 (Formerly H133A120122)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 12 $499,805; FY 13 $499,412; FY 14 $498,646; FY 15 $499,195; FY 16 $499,790

Abstract: The purpose of this project is to perform a state-of-the-art study of employment after spinal cord injury (SCI) to identify factors related to successful employment throughout the life cycle. Research and service delivery models of employment after disability typically focus heavily on transition or return to work, rather than a focus on maintaining employment, advancing in career, and maximizing earning potential. This is a two-stage research study beginning with a qualitative component that elicits factors related to successful employment from the perspective of stakeholders with SCI, including those who have had highly successful careers. A large-scale, quantitative study, incorporating the qualitative findings and input from advisory panels is used to develop econometric models of participation in employment and quality employment outcomes throughout the work life cycle. The project includes an integrated program of dissemination, training, and technical assistance to ensure the new knowledge generated may be translated into policy and practice.
Facilitating Employment for Youth with Autism: A Replication Study of an Internship Model to Identify Evidence Based Practices

Project Number: 90DP0051 (Formerly H133A120140)
Start Date: October 01, 2012
Length: 60 months

NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 12 $499,995; FY 13 $489,085; FY 14 $499,466; FY 15 $497,639; FY 16 $497,639

Abstract: This project is designed to determine the efficacy of a nine-month hospital-based internship intervention for transitioning young adults with autism spectrum disorders (ASD). This internship program, based on the Project SEARCH model, is currently being tested and evaluated in a randomized clinical trial at two Bon Secours Hospitals in Richmond, Virginia. This project replicates this intervention in two new Virginia hospitals: one in Northern Virginia and one in the Norfolk area. The intervention consists of two components: (1) 900 hours of onsite training over 9 consecutive months at the host hospital site, and (2) training and support provided by employment specialists with expertise in autism, applied behavior analysis, supported employment, and business networking. Data collection focuses on a number of key measures when comparing the outcomes of the youth participating in the randomized clinical trials. First, did the young adults with ASD obtain and retain competitive employment? Second, did they earn a commensurate wage (at least minimum wages) and benefits? Third, how many hours per week were they employed? This project is a collaboration of Virginia Commonwealth University’s Department of Physical Medicine and Rehabilitation and the Virginia Department of Aging and Rehabilitative Services.
VR-ROI Project: Estimating Return on Investment in State Vocational Rehabilitation Programs

University of Richmond
Robins School of Business

**Project Number:** 90DP0070 (Formerly H133A140095)  
**Start Date:** October 01, 2014  
**Length:** 60 months  
**NIDILRR Officer:** Hugh Berry, EdD  
**NIDILRR Funding:** FY 14 $499,856; FY 15 $499,902; FY 16 $499,530; FY 17 $499,819; FY 18 $499,771

**Abstract:** This project examines the return on investment (ROI) in eight state vocational rehabilitation (VR) programs. ROI information for the state-federal VR program is increasingly seen as a way to demonstrate the effectiveness of VR. Recent years have seen substantial growth in the numbers of ROI studies of state VR programs. However, the analytic methods, time periods covered, and data used in existing VR ROI studies have varied widely. Most recent analyses have serious shortcomings that limit the credibility and utility of their results. This project refines and tests existing ROI models using a more heterogeneous set of state agencies and a more recent cohort of applicants for VR services. The project also tests a "turnkey" approach to ROI analysis that can generate rigorous and credible estimates for any size agency, for individuals with virtually any type of disability, and for different types of VR services. The project includes development of a user-friendly, web-based “ROI Estimator” to allow state agencies to simulate the impact of different VR services on the employment outcomes of VR clients, and to develop ROI estimates for the entire state program. Project activities include VR ROI estimates for specific populations, including youth in transition, individuals with several low-incidence disabilities, and individuals with disabilities from minority backgrounds; development and dissemination of training materials for state VR agencies interested in conducting ROI analyses; and training in effective use of both the project’s methodological framework and the agency-specific results produced by the ROI Estimator. This project is a collaboration of the University of Richmond, the Virginia Department for Aging and Rehabilitative Services, the George Washington University, and the University of Arkansas CURRENTS.
Effects of Customized Employment on the Employment Outcomes of Transition-Age Youth with Disabilities: A Randomized Clinical Trial

Virginia Commonwealth University
1314 West Main Street
PO Box 842011
Richmond, VA 23284-2011
kinge@vcu.edu

Principal Investigator: Katherine Inge, PhD, OTR
Public Contact: 804/828-5956

Project Number: 90DP0085
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 16 $499,932; FY 17 $499,945; FY 18 $499,983; FY 19 $499,881; FY 20 $499,902

Abstract: This project researches the use of customized employment (CE) as an intervention to assist individuals with intellectual disabilities (ID) and/or autism spectrum disorder (ASD) to achieve integrated employment outcomes. Project activities include: (1) operationalizing the term customized employment as an evidence-based practice for individuals with ID/ASD; (2) evaluating and comparing the employment outcomes of individuals with ID/ASD who receive the CE intervention to those who receive “services as usual; “ and (3) conducting knowledge translation activities (e.g., training, technical assistance, utilization, and dissemination) to facilitate vocational rehabilitation professionals’ and other stakeholders’ implementation of customized employment as an evidence-based practice. Outcomes include: (1) improving the employment outcomes of individuals with ID/ASD in careers of their choice, (2) maximizing their full inclusion and integration into community employment, and (3) enhancing vocational rehabilitation professionals and other stakeholders’ capacity to provide customized employment services to these individuals. Dissemination activities include: (1) providing training activities such as webcasts, an online course on customized employment, participation in national, state, and local conferences, and face-to-face training as requested; (2) disseminating research findings through a project website and other means including use of social media, scholarly articles and articles in popular media, research briefs, fact sheets, and a project replication manual; and (3) providing technical assistance through an online rapid response database and through other traditional means (e.g. telephone, TDD, email, etc.) as requested. This project is a collaboration of the Virginia Commonwealth University (VCU) in partnership with TransCen, Inc.; the Virginia Department for Aging and Rehabilitative Services (VA/DARS), the state’s general vocational rehabilitation (VR) agency; and Griffin-Hammis, Inc.

NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 16 $197,844; FY 17 $201,242; FY 18 $197,378

Abstract: This project is researching a customized employment (CE) model with individuals with serious psychiatric disabilities (SPD). The objective is to determine the feasibility and outcomes of CE, when implemented with fidelity, as a strategy for increasing job acquisition and sustained integrated competitive employment. To fulfill the project’s objective, researchers deliver CE training to 18 employment specialists, support these employment specialists in implementing CE with individuals with SPDs, assess the feasibility of the CE model, create a CE fidelity scale and assess CE implementation integrity, evaluate CE for effects on employment outcomes, compare the results to vocational rehabilitation data and the supported employment literature, and disseminate findings to inform future research.

NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 14 $200,000; FY 15 $200,000; FY 16 $200,000

Abstract: This study extends the research on the Individual Placement and Support (IPS) model, a well-established evidence-based supported employment model for people with severe mental illness, to people with a dual diagnosis of severe mental illness and opioid use. Individuals who are dually diagnosed with severe mental illness and substance use face multiple barriers to recovery. This group also faces lower employment levels, which is even more pronounced for African Americans in urban areas. The project integrates the IPS model with a highly successful treatment program employing medication-assisted therapy to reduce opioid use, combined with a tailored cognitive behavior therapy approach. Using a randomized controlled design, this study evaluates whether IPS improves employment outcomes over a 12-month period. The project’s secondary goal is to assess whether employment lessens substance use and psychiatric symptoms, and improves quality of life and healthy friendships. A qualitative substudy examines staff and client experiences with this innovative employment program. This study is being conducted by senior clinician-researchers from the Department of Psychiatry at Howard University in collaboration with Dartmouth University.
Field Initiated Projects (FIPs)  
Georgia

**Assistive Software Knowledgebase for Computers and Mobile Devices**

Georgia Institute of Technology  
Centers for Inclusive Design Innovation (CIDI)  
512 Means Street, Suite 300  
Atlanta, GA 30318

**Principal Investigator:** Karen Milchus  
**Public Contact:** 404/894-0393; Fax: 404/894-9320

**Project Number:** 90IF0125  
**Start Date:** September 30, 2016  
**Length:** 36 months  
**NIDILRR Officer:** William V. Schutz, PhD, MSW, MPH  
**NIDILRR Funding:** FY 16 $200,000; FY 17 $200,000; FY 18 $200,000

**Abstract:** This project develops the Assistive Software Knowledgebase, a centralized resource for information about computer software/apps that enable an employee with a disability to use a computer or perform other work tasks. The project goal is to improve the provision of workplace accommodations by providing a tool that employees with disabilities, employers, and rehabilitation professionals can use to make informed choices about selecting, acquiring, and using assistive software. The site includes searchable information about features, usage tips, compatibility, and user experiences with a variety of software, such as screen readers or scheduling apps. Project objectives are to: (1) create a database of product descriptions, leveraging CATEA's Assistivetech.net / ATWiki, Tools for Life’s Our Favorite Apps, and Raising the Floor’s Unified Listing and Marketplace; (2) engage stakeholders through social networking and crowd sourcing to post tips and reviews; (3) optimize the site and mobile app for usability; (4) provide training on mobile apps as work accommodations; and (5) disseminate the tool through ATIA, state AT Act projects, and employer, disability, and rehabilitation provider networks. Stakeholders can explore accommodations that better fit their needs, are more likely to be used, and may be cheaper. Products of this three-year project are the Assistive Software Knowledgebase, a mobile app version, and trainings on workplace apps. CIDI is a consortium of the Center for Assistive Technology and Environmental Access (CATEA) and AMAC Accessibility / Tools for Life (Georgia’s Assistive Technology Act Project). Partners include Raising the Floor and Assistive Technology Industry Association (ATIA).
Field Initiated Projects (FIPs)
Illinois

PRIDE (Partners of Refugees in Illinois Disability Employment)

The Board of Trustees of the University of Illinois
1640 West Roosevelt Road, MC 626
Chicago, IL 60608
roosheyh@uic.edu

Principal Investigator: Rooshey Hasnain, EdD; Mansha Parven Mirza, PhD; 312/413-0416; 312/355-5427
Public Contact: 617/970-5904; 312/413-0416; 312/355-4257

Project Number: 90IF0110
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 16 $199,495; FY 17 $196,262; FY 18 $196,623
Abstract: The Partners of Refugees in Illinois Disability Employment (PRIDE) project develops innovative strategies and tools to improve vocational rehabilitation (VR) access and employment outcomes for refugees with disabilities. The PRIDE project has four goals: (1) building organizational capacity among refugee service providers; (2) providing comprehensive training interventions and supports to promote competitive and self-employment; (3) improving connectivity between refugees with disabilities, VR providers, and potential employers by developing and field testing an information technology application; and (4) disseminating PRIDE’s outputs and products in culturally relevant ways. The PRIDE project offers culturally tailored employment training to 50 job-seeking refugees with disabilities. Concurrent with the training sessions, participants receive personalized case management services from staff of partner agencies, peer mentoring, and personal consultation with a business consultant. By facilitating new connections between the state VR systems, refugee-serving agencies, and employers, the PRIDE project assists in building economic self-sufficiency of refugees who have disabilities, while shaping future VR and employment policies and practices pertaining to this underserved group.
Assessing Family Employment Awareness Training (FEAT)

University of Kansas
Beach Center on Disability
1200 Sunnyside Avenue
Haworth Hall, Room 3134
Lawrence, KS 66045
jgross@ku.edu
www.beachcenter.org/families/family_employment_awareness_training/default.aspx

**Principal Investigator:** Judith M.S. Gross, PhD  
**Public Contact:** 785/864-7601

**Project Number:** 90IF0058 (Formerly H133G130261)  
**Start Date:** October 01, 2013  
**Length:** 36 months  
**NIDILRR Officer:** Hugh Berry, EdD  
**NIDILRR Funding:** FY 13 $199,995; FY 14 $199,997; FY 15 $199,997; FY 16 (No-cost extension through 9/29/2017)

**Abstract:** This project conducts a comparative study to assess the efficacy of the Family Employment Awareness Training (FEAT) knowledge-based intervention in impacting competitive employment outcomes for individuals with significant support needs aged 16-22 years. The aims of this research are to assess the efficacy of this intervention on impacting knowledge/attitude changes (short-term) and behavioral changes (intermediate) over time. Methods include pre- and post-training surveys of attendees and interviews with families regarding employment experiences, including barriers families encounter when seeking competitive employment for their member with significant support needs. Objectives of this project are: To explore how families describe their employment knowledge and expectations, and any influencing factors; to understand the experiences of families as they attempt to obtain and/or maintain employment for their family member with a disability; to identify the barriers families perceive as affecting employment outcomes of their child; and to understand how families overcome barriers to competitive employment.
Evaluating the Effectiveness of CareProfiler Post-Hire System for Staff Supporting People with Disabilities and Age-Related Needs: Cluster Randomized

Regents of the University of Minnesota
200 Oak Street, SE
Minneapolis, MN 55455-2009

Principal Investigator: Brian Abery, PhD
Public Contact: 612/625-5592

Project Number: 90IF0109
Start Date: September 30, 2016
Length: 36 months

NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 16 $196,778; FY 17 $196,778; FY 18 $199,271

Abstract: This project is based on a conceptual framework for the delivery of supports for employees with disabilities and their employers. The research for this project is designed to validate the CareProfiler Post-Hire system, which is designed to maximize the effectiveness of supports provided to people with intellectual and developmental disabilities (IDD) and age-related support needs (ARSN). This system builds the capacity of supervisors to serve as more effective leaders, increase job retention, and maximize the impact of organization training on staff skills and competencies by maximizing engagement with clients and one’s job. The Institute on Community Integration (ICI) at the University of Minnesota serves as an evaluator of the effectiveness of the CareProfiler Post-Hire System. The evaluation is designed as a cluster randomized control trial of the three components of the Post-Hire System on supervisor competencies and direct support staff engagement, skills, competencies, and retention on the job supporting people with IDD and ARSN.
Treating Hidden Barriers to Employment:
Integrated Treatment for PTSD in Supported Employment

Rutgers, The State University of New Jersey
Psychiatric Rehabilitation & Counseling Professions
1776 Raritan Road, Room 312
Scotch Plains, NJ 07076
luwel@shrp.rutgers.edu

Principal Investigator: Weili Lu, PhD; William Waynor, PhD
Public Contact: 908/889-2453

Project Number: 90IF0074 (Formerly H133G140147)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 14 $199,914; FY 15 $199,978; FY 16 $199,986
Abstract: This project evaluates the feasibility and effectiveness of integrated cognitive behavioral treatment (I-CBT), an intervention aimed at enhancing employment among people with psychiatric disabilities and co-morbid post-traumatic stress disorder (PTSD) who are receiving supported employment services. The project adapts an existing evidence-based CBT intervention proven to reduce PTSD symptoms in individuals with psychiatric disabilities, and integrates it into a supported employment program. The goal is to develop an evidence-based program to support individuals with co-occurring psychiatric disabilities and PTSD seeking employment, and address PTSD as a hidden barrier to their success.
Evaluating the Impact of Employment Services in Supportive Housing

Rutgers, The State University of New Jersey
School of Health Related Professions
Department of Psychiatric Rehabilitation
and Counseling Professions
40 East Laurel Road; UEC 2136
Stratford, NJ 08084
gaoni@shrp.rutgers.edu

Principal Investigator: Ni Gao, PhD, LCSW
Public Contact: 856/566-2770; Fax: 856/566-6820

Project Number: 90IF0088 (Formerly H133G130310)
Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 13 $199,826; FY 14 $198,594; FY 15 $197,030; FY 16 (No-cost extension through 9/29/2017)
Abstract: This project examines the impact of adding employment services to the supportive housing environment on employment outcomes for people with psychiatric disabilities. Supportive housing has been identified as a complementary program to which supported employment can effectively be added. These services share an overall philosophy and service approach that uses community-based services, supports community inclusion, and provides highly individualized services. Supportive housing also provides a safe and stable environment for individuals with psychiatric disabilities, creating a good foundation on which to build the pursuit of meaningful activities, such as employment. For this project, ten supportive housing program sites participate via cluster randomization to one of two conditions (five programs in each condition): (1) Experimental – with staff trained to provide employment services via an in-vivo coaching method, or (2) Active Control – with staff exposed to basic information regarding the positive impact of work on recovery and the availability of existing community resources. Two hundred individuals with psychiatric disabilities from the enrolled supportive housing programs participate. Research data is collected from participants over a period of 12 months with major data collection at enrollment, 6 months, and 12 months; and brief employment tracking forms completed monthly.
Getting and Keeping People with Disabilities in the Workforce: Negotiating Work, Life, and Disability

Cornell University
ILR School
Employment and Disability Institute
303A Dolgen Hall
Ithaca, NY 14853-3901
lhc62@cornell.edu

Principal Investigator: LaWanda H. Cook, PhD
Public Contact: 607/255-2928; Fax: 607/255-2763

Project Number: 90IF0051 (Formerly H133G130136)
Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 13 $200,000; FY 14 $200,000; FY 15 $200,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project examines the strategies and resources used by individuals with disabilities who are successfully employed to negotiate the work and non-work domains leading to longer, more satisfying work lives, and the role of employers and disability service professionals in supporting this. Balance between work and the rest of life is vital to individuals’ employment success and overall well-being. Employees who lack work-life balance (WLB) may experience reduced productivity, decreased job satisfaction, and opt to leave their jobs or exit the workforce altogether rather than struggle to meet competing demands. The project aims to: (1) understand how individuals with disabilities perceive WLB, and its relationship with Quality of Work-Life (QWL); (2) categorize the strategies and resources these individuals utilize to manage their work-life needs; (3) identify the individual and work context factors which facilitate positive WLB for employees with disabilities; and (4) inform and support individuals with disabilities, employers, and service professionals about how to improve the QWL for employees with disabilities. The project utilizes surveys and focus groups with individuals with disabilities in various job sectors, as well as targeted outreach to employers and disability service professionals.
Evaluating the Effectiveness of Online, Portal-Based Vocational Rehabilitation Services

Wright State University
Boonshoft School of Medicine
PO Box 927
Dayton, OH 45410-0927
josephine.wilson@wright.edu
www.med.wright.edu/citar/sardi

Principal Investigator: Josephine F. Wilson, DDS, PhD
Public Contact: 937/775-1484; Fax: 937/775-1495

Project Number: 90IF0081 (Formerly H133G140194)
Start Date: October 01, 2014
Length: 36 months

NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 14 $199,999; FY 15 $199,988; FY 16 $199,990

Abstract: This project evaluates the effectiveness of online, portal-based vocational rehabilitation (VR) services by comparing the outcomes and cost effectiveness of online VR services with the outcomes and cost effectiveness of traditional VR services offered in Ohio, Illinois, and Kentucky. Many individuals with significant disabilities have limited access to VR services because of physical, cultural, and social barriers, such as mobility issues and communication difficulties. The goal of this portal project is to improve access to VR services and enhance employment outcomes for these individuals with disabilities. Specific aims are to: (1) implement online VR services that are delivered through personal portals that are optimized for use on cell phones, tablets, and computers; (2) compare employment outcomes and cost effectiveness of online and traditional VR services in a randomized controlled trial; and (3) evaluate the feasibility, usability, and adoption of online services by VR counselors and consumers. The long-term goal is to train and encourage VR counselors across the nation to use online technology to provide services to VR consumers when time, distance, and/or disability constrain the delivery of traditional VR services.
Mobile Accommodation Tool:  
Development, Implementation, and Evaluation

West Virginia University Research Corporation  
International Center for Disability Information  
886 Chestnut Ridge Road  
Morgantown, WV 26506  
hendricks@jan.wvu.edu

**Principal Investigator:** D.J. Hendricks, EdD  
**Public Contact:** 304/293-7186, ext. 160

**Project Number:** 90IF0097  
**Start Date:** September 30, 2015  
**Length:** 36 months  
**NIDILRR Officer:** Hugh Berry, EdD  
**NIDILRR Funding:** FY 15 $199,897; FY 16 $199,737; FY 17 $199,942

**Abstract:** The goal of this project is the successful development and deployment of a cloud-based Mobile Accommodation Tool (MAT) for use in the disability field to provide individualized accommodation support. The MAT supports the user by guiding and documenting the good faith efforts made during the interactive accommodation process. Intended users include employers, hiring managers, disability management staff, return-to-work specialists, rehabilitation professionals, and service providers as well as people with disabilities who are seeking work, candidates for employment, or current employees. The MAT contains a downloadable database for storing and exporting individualized accommodation case records, how-to resources for making an accommodation, forms for generating communication between the individual with a disability and the employer representative, and various other tools such as an accommodation checklist to manage the accommodation process. The MAT enables those responsible for accommodating applicants, candidates, and employees with disabilities and aims to demystify the process and minimize common mistakes made during the interactive process. This project is a partnership with the International Center for Disability Information at West Virginia University, the Job Accommodation Network (JAN), and IBM.
Community Living and Participation

NIDILRR is committed to improving the opportunities and abilities of individuals with disabilities to live as integrated members of their communities and to participate in community activities of their choice. NIDILRR supports centers and projects to increase community living and participation through improvements in policy, services and support delivery, assistive technologies, environmental modifications, and person-centered planning and therapeutic interventions. Activities funded in this area are consistent with the underlying principles of the independent living programs authorized under the Rehabilitation Act and the ADA.

Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Phillip Beatty, PhD
NIDILRR Funding: FY 13 $875,000; FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $875,000

Abstract: The Community Living Policy Center (CLPC) at the University of California San Francisco (UCSF) aims to identify methods of improving the long-term services and support (LTSS) system in the states, improve data collection on community living policy, and develop a strategic plan for community living research. Research focuses on the following areas: (1) Identification of promising practices in state LTSS systems, focusing especially on managed LTSS and on streamlining the LTSS system; (2) investigation of quality and outcome measurement in LTSS and development of methods for improved monitoring of progress in state LTSS systems; (3) collecting and disseminating information on state LTSS policies, practices, and programs, including policies related to access to home- and community-based services (HCBS), data on HCBS participants and expenditures, information on worker registries and consumer-worker matching services, data on worker wages and benefits, and information on worker training standards and their development; (4) conducting evaluations of managed LTSS systems in California and Illinois; (5) analysis of national survey datasets on selected topics in community living, including trends in family caregiving and state variation in community participation among people with disabilities; and (6) developing a strategic plan for community living research. CLPC training activities include the College of Personal Assistance and Caregiving (CPAC), an online training curriculum for both paid home care workers and family caregivers, with an emphasis on person-centered, consumer-directed services that support independent living in the home and community. This project includes partnership with the following organizations: Disability Rights Education and Defense Fund, National Council on Aging and the Disability and Aging Collaborative, Department of Disability and Human Development at the University of Illinois at Chicago, PHI (formerly the Paraprofessional Healthcare Institute), Topeka Independent Living Resource Center, and the Sibling Leadership Network.

Project Number: 90RT5032 (Formerly H133B140046)
Start Date: October 01, 2014
Length: 60 months

NIDILRR Officer: Hugh Berry, EdD

NIDILRR Funding: FY 14 $874,999; FY 15 $874,999; FY 16 $874,995; FY 17 $874,983; FY 18 $874,989

Abstract: The goal of the RRTC on Family Support is to bridge aging and disability research, practice, and policies to generate new knowledge in family supports which contributes to improvements in community living, participation, health and function, and other outcomes for individuals with disabilities from different racial and ethnic backgrounds who are supported by family members. The Center conducts six research projects: (1) Development of a Strategic Plan for Family Support uses a participatory approach to generate and prioritize research topics and questions, an expert panel to design research strategies, and secondary analysis of national data to answer identified questions; (2) Identifying Promising Practices in Family Support Services uses a participatory approach with stakeholders to nominate, investigate, and synthesize promising local and state family support practices that can be disseminated and used more widely; (3) Family Member Roles and Well-Being in Self-Directed Waiver Programs examines the relationship between self-directed waiver program components, family environment, and caregiver well-being; (4) Understanding Experiences, Trends, and Needs in Self-Directed Support Programs uses mixed methods to investigate national trends in self-directed support, and the experience and satisfaction of caregivers in self-directed support programs; (5) Family Support in Managed Care investigates the impact of transitioning from fee-for-service to managed care on families and individuals who receive services; and (6) Parents Taking Action: A Parent Training Program for Latino Families of Children with Autism Spectrum Disorders (ASD) tests the efficacy of an intervention that engages parents of children with ASD in providing education and training to other parents. The Center partners with the Lurie Institute for Disability Policy at Brandeis University, the National Resource Center for Participant-Directed Services at Boston College, the RTC on Community Living at the University of Minnesota, and the National Council on Aging as well as various organizational partners.

Abstract: The goal of the Rehabilitation Research and Training Center on Community Living (RRTC/CL) is to increase the continuity of community living and full community participation of people with disabilities through the development and implementation of scientifically sound, theoretically driven, and evidence-based data analysis and interventions. The RRTC’s 13 core projects represent a comprehensive, integrated, and robust array of activities promoting community participation among people with disabilities. These projects recognize “disability” as an interaction between the characteristics of an individual and his/her environment. Six research projects conduct secondary data analyses to provide a knowledge foundation about how the barriers to and experiences of community living may differ across socio-demographic and geographic groups within the diverse population of individuals with disabilities. Five intervention projects evaluate the efficacy of programs, policies, and practices to improve services and supports that provide community participation opportunities for individuals with disabilities. These interventions address consumer participation needs in the areas of housing, health, recreation, and community and civic involvement. Several of these address the services and supports needed to transition from institutions, nursing homes, and other health and community institutions to the community and to maintain continuity of community living. Project investigators and staff regularly work with consumers with disabilities to incorporate their input on individual projects, as they are planned and implemented. The Center employs and adds to the latest knowledge translation approaches to disseminate research results that target multiple audiences, including advocates, policymakers, and program planners. The goal of the dissemination plan is to translate knowledge to allow scientists, policymakers, consumers, and consumer advocates in the area of disability and independent living to create and maintain greater opportunities for community living and participation of people with disabilities.

Project Number: 90RT5043
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 16 $875,000; FY 17 $875,000; FY 18 $875,000; FY 19 $875,000; FY 20 $875,000

Abstract: The Rehabilitation Research and Training Center on Promoting Interventions for Community Living (RRTC/PICL) promotes community participation outcomes for adults with physical and multiple co-occurring disabilities, living in the community or transitioning from nursing facilities to the community. The objectives of this Center are to use a person-environment fit model to investigate evidence-based, multifaceted interventions that target change in individual characteristics and environmental factors to support enhanced community participation. The Center’s research begins with a systematic literature review on multifaceted community-based interventions and progresses to a single research project that involves three studies: (1) development and refinement of the Out and About Intervention, teaching problem solving and goal setting to support community participation; (2) an efficacy study that utilizes a randomized control trial to study the impact of the Home Base intervention to empower consumers to self-assess their home environment and to provide support to enhance their home usability, resulting in a guide for assessing home usability; and (3) a second efficacy study that investigates the impact on the community participation of consumers that receive both interventions. Outcomes are measured quantitatively and qualitatively, including increased usability of consumers’ homes, increased health and reduction of secondary health conditions, personal goal achievement, and increased participation in the community. Dissemination activities include systematic reviews, webinars, publications, and a National Community Living Resource Center.

NIDILRR Funding: FY 10 $799,983; FY 11 $799,968; FY 12 $799,992; FY 13 $799,988; FY 14 $799,992; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 9/29/2017)

Abstract: This project advances, disseminates, and applies knowledge in rheumatological rehabilitation—an interdisciplinary field that integrates rheumatologic, musculoskeletal, neurological, behavioral, and social systems to optimize activity and participation among persons with arthritis. Project objectives include: (1) advancing science regarding effective interventions to optimize activity and enhance social, community, and work participation among persons with arthritis; (2) developing a team of interdisciplinary rheumatology rehabilitation clinical researchers knowledgeable in disablement, rehabilitation, rheumatology, and clinical research methods; and (3) disseminating knowledge, resources, and programs to consumers, providers, and researchers to promote activity and participation among persons with arthritis. These project objectives are addressed by a series of nine inter-related project activities: Project 1: “Efficacy of a Modified Vocational Rehabilitation Intervention for Work Disability” is a randomized controlled trial examining work disability outcomes of a structured intervention that poses solutions to work barriers identified by persons at risk of work loss; Project 2: “Can Computer-Based Telephone Counseling Improve Long-Term Adherence to Strength Training in Elders with Knee Osteoarthritis?” is a randomized controlled trial of a telecommunication physical activity adherence program for older adults with knee osteoarthritis; Project 3: “Community and Home Participation after Total Knee Replacement” is an epidemiological and qualitative study examining factors associated with poor participation outcomes post total knee joint replacement; Project 4: In partnership with Massachusetts Chapter of the Arthritis Foundation, a series of community consumer forums address knee osteoarthritis for members of underrepresented groups in the Greater Boston area; Project 5: A series of in-services and webinars are conducted to disseminate knowledge to providers of persons with arthritis; Project 6: A state-of-the-science conference on enhancing activity and participation for persons with arthritis is conducted; Project 7 is a partnership with the Arthritis Foundation to train new leaders of the Arthritis Foundation Exercise
Program for future implementation of the program in underrepresented communities; Project 8: Development and evaluation of a new online program to help adults with knee osteoarthritis problem-solve the potential challenges experienced when initiating physical activity programs; and Project 9: Development and evaluation of a new online program providing resources for adults with arthritis optimizing job retention. Additionally, this project implements and evaluates a structured mentored training program developing a new group of scientists in the field of rheumatological rehabilitation.

NIDILRR Funding: FY 13 $875,000; FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $875,000
Abstract: The University of Minnesota’s Research and Training Center on Community Living (RTC/CL) conducts research, training/technical assistance, and dissemination activities focused on community living and participation of individuals with intellectual and developmental disabilities (I/DD). Research studies within the RTC/CL include policy and outcome analyses using the largest, most comprehensive data set of individual outcomes for a random sample of adults with I/DD from 36 geographically representative states; intervention studies related to participation through self-determination, social inclusion, employment, and the direct support workforce in a variety of community living service settings including family and individual homes. The RTC/CL provides a comprehensive training program that has and will continue to develop new generations of competent and skilled disability researchers and professionals. Outreach programs provide training and technical assistance to agencies and individuals across the US. The RTC/CL training programs include: (a) the annual Reinventing Quality Conference; (b) presentations at national, regional, and state conferences; (c) a state of the science conference; and (d) training and technical assistance with national, state, and local community organizations. The RTC/CL’s College of Direct Support, an acclaimed national interactive internet-based training program, trains over 390,000 direct support personnel each day. The RTC/CL disseminates practical information to targeted varied audiences through nationally recognized video/film productions and publications, including IMPACT, Policy Research Brief, and Frontline Initiative. RTC/CL websites provide access to its various publications and products.

Length: 60 months
NIDILRR Officer: Amanda Reichard, PhD
NIDILRR Funding: FY 15 $875,000; FY 16 $875,000; FY 17 $875,000; FY 18 $875,000; FY 19 $875,000

Abstract: The Rehabilitation Research and Training Center on Home and Community Based Services Outcomes Measurement (RRTC/OM) conducts research, training, and technical assistance activities to promote quality outcome measurement in home and community based services (HCBS), working in close alignment with the National Quality Forum (NQF), the Administration for Community Living, and other stakeholders. Research activities identify and prioritize HCBS outcome domains, identify measure gaps and evolve new measures, catalog existing measures and evaluate these for validity and appropriateness, select the best measures for each outcome domain/topic area, test measures for reliability and validity, and assess measures using prioritized risk adjusters. Focus is on cross-disability measures at the individual HCBS recipient, organization, and systems levels gathered directly from people with disabilities or through program administrative and encounter data. Each measure will be prepared and submitted for approval by the NQF. In addition to identifying and testing measures, the RRTC/OM investigates methodological issues with regard to outcome measurement by working with numerous outcome measurement programs to identify existing data collection/reporting methods, evaluate their rigor, and evolve recommendations for preferred data collection and reporting. The RRTC/OM also provides training and technical assistance to federal agencies, states, organizations, and other stakeholders on HCBS quality outcome measurement and systems. These activities include but are not limited to: training on how to use an online searchable database of HCBS measures by domain area, development and implementation of webinars regarding HCBS measurement, and participation in conferences and other coordinated dissemination activities.

Project Number: 90RT5025 (Formerly H133B130028)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 13 $875,000; FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $875,000

Abstract: The Research and Training Center on Disability in Rural Communities (RTC:Rural) at the University of Montana advances the science of rural disability and rehabilitation by finding solutions to rural issues experienced by people with disabilities (PWD) in the areas of health, employment, and community living. Current research and development projects include: Geography of Rural Disability, which uses GIS and national data sources (i.e. American Community Survey and Public Use Microdata Samples) to examine the distribution of PWDs and availability of services in rural communities; Ecology of Rural Disability, which uses longitudinal data to examine how personal and environmental factors impact community participation; Resilience in Community Participation, which studies factors that contribute to active community participation among PWDs; Person-Environment Fit in Rural Communities, which uses real-time assessment data to predict community participation; Measuring Opportunity in Rural Events, which creates a validated measure for assessing the accessibility of rural community events; Rural Contracted Employment Services, which develops recommendations for increasing employment support providers in rural communities by examining variations in provider payments structures; Social Media for Employment, which aims to improve use of online job search and social media strategies to improve rural employment opportunities; Rural Self-Employment Opportunities, which evaluates a process for increasing the skills of vocational rehabilitation counselors in the area of self-employment; Community Accessibility of Rural Environments, which demonstrates how community accessibility data can be used to advocate for community improvement; and Rural Mobile Health Promotion Intervention, which develops a mobile device application to addresses common secondary health conditions. The RTC: Rural Knowledge Translation activities communicate research findings to a broad audience through dissemination, training, and technical assistance (TA). Dissemination includes publications, conference presentations, print and electronic mailings, websites, and social media. Specific training
efforts include a state of the science conference series, development of a rural rehabilitation and disability curricula, mentoring student researchers, a rural policy series, and continued training on established projects. TA includes rapid research response to stakeholder requests and supporting the Association of Programs for Rural Independent Living National Training and TA in rural policy issues.

Public Contact: Donna Fleming 503/725-8313; Fax: 503/725-4180

Project Number: 90RT5030 (Formerly H133B140039)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 14 $499,600; FY 15 $499,600; FY 16 $499,600; FY 17 $499,600; FY 18 $499,600
Other Funding: FY 14 $375,400 (Substance Abuse and Mental Health Services Administration (SAMHSA)); FY 15 $375,400 SAMHSA; FY 16 $375,400 SAMHSA; FY 17 $375,400 SAMHSA; FY 18 $375,400 SAMHSA

Abstract: This Center conducts research, training, and dissemination activities focused on building self-determination and enhancing community living and participation outcomes in young people with serious mental health conditions (SMHCs). The Center conducts six intervention-based projects: FUTURES tests an approach to improving college retention and success, as well as community participation and self-determination, among first-year college students with SMHCs who are, or have been, in foster care. EASA Connections tests a web-based psychoeducation and decision-aid intervention designed to increase the extent to which young people who are experiencing a first episode of psychosis are engaged and self-determined with regard to their treatment. A third project, Mentee-Nominated Mentoring, is a developmental investigation of a cutting-edge approach to helping young people who have been living in psychiatric inpatient facilities transition back to the community and build social and cultural capital. Two additional projects develop and evaluate interventions designed to increase providers’ skill in working with youth and young adults with SMHCs to increase their self-determination and enhance their community living and participation: Technology-Enhanced Coaching for Positive Development focuses on professional providers and their supervisors, while AMP+: Developing the Young Adult Peer Support Workforce works with young adult peer support providers and their supervisors and agency administrators. Both of these projects employ new technology to improve training, coaching, and supervision. Finally, System/Policy Analysis and Change is focused on understanding key system issues and policy challenges that impede or support accessible and effective services for young adults with SMHCs. This project also examines examples of young adult-led policy change and the challenges young adult advo-
cacy organizations face when they enter the policy arena. Additionally, this RRTC assesses the utilization of Promoting Positive Pathways to Adulthood, a series of online training modules designed for service providers who work with youth and young adults with SMHCs. Collaborations with young people and other stakeholders, including providers, researchers and family members, ensure that interventions are practical and feasible, and that training and dissemination are relevant and useful. This project is also supported by the Substance Abuse and Mental Health Services Administration (SAMHSA).

Abstract: This project advances the development of interventions that maximize community living and participation of individuals with psychiatric disabilities through research and knowledge translation activities in partnership with consumers and other key stakeholders. This project conducts seven research studies in the areas of technology, individual and environmental factors, and interventions, and includes transition-aged youth. The research includes randomized, controlled designs; cross-sectional studies where structural equation modeling and geographic information systems technology are utilized; and epidemiological methods. This project also conducts three technical assistance, three training, and two dissemination projects.

Project Number: 90DP0014 (Formerly H133A110009)
Start Date: October 01, 2011
Length: 60 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 11 $500,000; FY 12 $500,000; FY 13 $500,000; FY 14 $500,000; FY 15 $500,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project incorporates two inter-related and overarching frameworks for all project activities: (1) to understand and document the life cycle of families with diverse disabilities – from those parents with and without disabilities who are at the initial stages of having an infant with a disability, through children with disabilities growing up to become parents with disabilities, to adults with disabilities caring for their elderly parents; and (2) to use the perspectives of disability and Deaf communities to inform all project activities with an overall goal to increased participation and community living for individuals with disabilities and their families. Project goals focus on research, development, training, technical assistance, and dissemination activities: (1) increase the national availability of accessible and disability-appropriate resources for families with disabilities that incorporate perspectives drawn from diverse personal and family disability experiences across the life cycle; (2) increase families’ and providers’ knowledge about families with disabilities across the life cycle; (3) increase informed practice and informed decisions regarding families with disabilities across the life cycle; and (4) increase state and local legislative and policy changes to decrease discrimination against families with disabilities. This project targets four national populations: (1) parents and grandparents with diverse disabilities, (2) children with diverse disabilities, (3) members of families in which a parent or child has a disability, and (4) service providers and trainees. Over 5 years the DRRP (1) conducts 7 separate research and 18 new development projects; (2) provides technical assistance to at least 25,000 parents, family members, and providers; (3) conducts focused trainings to 10,000 diverse parents and providers; (4) nationally disseminates at least 200,000 project materials and products consolidated from project activities as well as from other NIDILRR-funded projects. Project activities are designed to address critical gaps in knowledge and resources that impact the daily lives of families with disabilities. Each of these research, development, and training projects target different facets of families with diverse disabilities – from national prevalence and demographics to understanding the perspectives of families at different stages of family formation to discriminatory or uninformed practice.
I-CONNECT PLUS: Enhancing Community Participation for Adolescents and Adults with ASD Using Online Instruction, Coaching, and Accessible Self-Management Technologies

Principal Investigator: Jay Buzhardt, PhD; Linda Heitzman-Powell, PhD; Debra M. Kamps, PhD; Ben Mason, PhD; Rose Mason, PhD; Howard Wills, PhD; 913/321-3143, ext. 2603

Public Contact: 913/321-3143

Project Number: 90DP0058 (Formerly H133A130032)

Start Date: October 01, 2013

Length: 60 months

NIDILRR Officer: Hugh Berry, EdD

NIDILRR Funding: FY 13 $458,224; FY 14 $474,772; FY 15 $467,313; FY 16 $462,543; FY 17 $473,103

Abstract: This project develops I-CONNECT PLUS, a technology-supported instructional system to teach social competence, problem-solving skills, and organizational/self-monitoring skills for adolescents and young adults with Autism Spectrum Disorder (ASD). The project provides remote tele-coaching by community providers, peers, and family members for promoting generalized use; and focuses on the use of self-management and monitoring of outcomes to promote independence and full engagement across settings. This project includes five objectives: (1) developing instructional technology including use of mobile applications (e.g., I-CONNECT PLUS) to teach social competence, problem solving, and organization/self-monitoring skills for adolescents and young adults with ASD; (2) developing tele-coaching materials to generalize skills to community settings; (3) adapting a self-management system to include applicable system features (e.g., skill task analysis, link to instructional modules) for I-CONNECT PLUS; (4) conducting initial pilot trial of the entire I-CONNECT PLUS program; and (5) assessing the feasibility of I-CONNECT PLUS program.
### Online and Applied Systems for Intervention Skills (OASIS)

#### Parent Training Program: Translating Research to Practice

University of Kansas Medical Center  
Center for Child Health and Development

**Principal Investigator:** Linda S. Heitzman-Powell, PhD  
**Public Contact:** 913/945-6604

**Project Number:** 90DP0097  
**Start Date:** September 30, 2016  
**Length:** 36 months  
**NIDILRR Officer:** Leslie J. Caplan, PhD  
**NIDILRR Funding:** FY 16 $149,940; FY 17 $149,938; FY 18 $149,993  
**Abstract:** The overall goal of this project is to create the infrastructure necessary for the dissemination and uptake of Online and Applied Systems Intervention Skills (OASIS), a training system developed through NIDILRR’s development and research field initiated programs. This project seeks to improve access to services for families, specifically those families that otherwise would not have access to services. The objectives of this project are to: (1) collaborate with key health-care partners to create the infrastructure needed to enable service providers to receive compensation for implementation of OASIS; (2) to develop the processes necessary to disseminate OASIS to the behavioral health care community to include appropriate, timely, and cost effective training on the use of OASIS; and (3) train service providers from key agencies to implement OASIS.
Measurement of Community Participation Using a Computer Adaptive Test (CAT) in Persons with Burn Injuries (PWB)

Public Contact: Lewis Kazis, ScD 617/414-1418

Project Number: 90DP0055 (Formerly H133A130023)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 13 $475,000; FY 14 $475,000; FY 15 $475,000; FY 16 $475,000; FY 17 $474,999

Abstract: This project develops and evaluates a computerized adaptive test (CAT) metric for assessing outcomes in adults with burn injuries for purposes of assessing community participation during ambulatory outpatient rehabilitation. The Burn Injury Computer Adaptive Test (BI-CAT) is developed by focusing on three domains: social interaction, work re-integration, and sexual function, with the goal of improving long-term community participation and functioning of individuals with burn injuries. A demonstration of BI-CAT provides an evaluation of respondent burden, acceptability to patients and clinicians, precision, sensitivity to change, and validity in outpatients with burn injury who are receiving care from the Boston Harvard – Burn Injury Model System (BHBIMS) at Massachusetts General Hospital (MGH) and Spaulding Rehabilitation Hospital. Comparisons are made between a well-established legacy measure, the Young Adult Burn Outcomes Questionnaire (YABOQ), and BI-CAT over a six-month follow-up period. This project builds on the resources of the BHBIMS, Boston University School of Public Health, MGH Burn Care Unit and Spaulding Rehabilitation Hospital, the National Phoenix Society, American Burn Association, and World Burn Congress.

Parents Empowering Parents: National Research Center for Parents with Disabilities and their Families

Brandeis University
415 South Street
Waltham, MA 02453-2728
slp@brandeis.edu

Principal Investigator: Susan L. Parish, PhD
Public Contact: 781/736-3928

Project Number: 90DPGE0001
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 16 $500,000; FY 17 $499,999; FY 18 $500,000; FY 19 $500,000; FY 20 $500,000

Abstract: This project addresses the knowledge gaps regarding parents with disabilities and their families through: (1) population-based research and analysis of national datasets to inform policy and practice; and (2) the systematic analysis of state legislation and child welfare policies to identify facilitators and barriers to systemic change. Researchers are developing, adapting, testing, and scaling-up interventions that include: (1) a parent peer specialist model for parents with psychiatric disabilities; (2) a virtual peer support intervention for Deaf parents; (3) a parent-centered planning intervention for parents with intellectual, developmental, and physical disabilities; and (4) a targeted, informed legal services model for parents with diverse disabilities. Resources, tools, and training and intervention materials are made available through the accessible online Parents Empowering Parents Portal and its sister site, Padres Apoderando a Padres. The project is also building on the Disabled Parenting Project web site, where parents and family members currently interact, share knowledge, and empower each other.
The Community for All Project to Develop a Series of Six Online Toolkits to Improve Community Living and Participation for People with Intellectual and Developmental Disabilities

Syracuse University
Taishoff Center for Inclusive Higher Education
150 Huntington Hall
Syracuse, NY 13244
wharbour@syr.edu

Principal Investigator: Wendy S. Harbour, PhD
Public Contact: 315/443-1288; Fax: 315/443-4338

Project Number: 90DP0068 (Formerly H133A140063)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 14 $420,139; FY 15 $484,055; FY 16 $499,972; FY 17 $495,699; FY 18 $404,305

Abstract: This project develops a six-part toolkit for self-advocates, families, professionals, and policymakers designed to improve community living and participation for people with intellectual and developmental disabilities (I/DD). The toolkits are based on the 2004 Community for All: Resources for Supporting Community Living. The six components are entitled Deinstitutionalization for All (an update of the 2004 toolkit); Self-Advocacy and Choices for All; Community Participation for All; Lifelong Learning for All; Family for All; and Digital Communities for All. Each toolkit consists of downloadable materials, a website, and an app. Development and modification of the toolkits are based on literature, suggestions from participants in Policy Institutes for each toolkit topic area, and recommendations from a technology conference for self-advocates. Annual Design Institutes advise the project regarding universal design and accessibility, and the development of basic computer instruction videos. Each toolkit prototype is field tested in New York with final versions tested nationally. Technical assistance is available throughout the project and there are four planned toolkit trainings. This project is a collaboration between the Center of Human Policy, Law, and Disability Studies; Taishoff Center for Inclusive Higher Education; the University of Delaware; and the Self-Advocacy Association of New York State (SA-NYS).
Understanding and Increasing Supported Decision-Making’s Positive Impact on Community Living and Participation Outcomes

Syracuse University

Principal Investigator: Peter D. Blanck, PhD, JD
Public Contact: 315/443-9703

Project Number: 90DP0076
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 15 $498,978; FY 16 $498,140; FY 17 $499,318; FY 18 $497,152; FY 19 $499,023

Abstract: This project creates and tests an intervention using a randomized control trial approach examining whether training individuals with intellectual and developmental disabilities (I/DD), their families, and support networks to use Supported Decision Making (SDM) approach improves life satisfaction and integration in community living and daily life outcomes. In Study 1, researchers use valid and reliable measures to survey study participants in order to determine their decision-making methods, level of self-determination, and life satisfaction outcomes, including community integration. This study investigates decision-making methods that lead to greater self-determination, life satisfaction outcomes, and community integration; and demographic variables, including legal decision-making status, that are associated with self-determination, quality of life outcomes, and community integration. Study 2 is a field-based intervention examining variables to determine the extent in which training in SDM leads to improvements on community participation. Project findings are used to recommend changes in policy and practice with the target population across the life course (i.e., youth in transition, working-age adults, aging population). Knowledge translation activities target policymakers, service providers, persons with disabilities and their families, and supporters, focusing on the impact and benefits of SDM. Materials and technical assistance are customized to target audience learner needs and preferences. This project is a collaboration between the Burton Blatt Institute at Syracuse University, the Beach Center/Kansas University Center on Developmental Disabilities, and Quality Trust for Individuals with Disabilities.

Collaborative on Health Reform and Independent Living

Washington State University
Department of Health Policy and Administration
PO Box 643140
Pullman, WA 99164-3140
jjkennedy@wsu.edu
www.chril.ilru.org

Principal Investigator: James J. Kennedy, PhD
Public Contact: 509/368-6971; Fax: 509/358-7984

Project Number: 90DP0075
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Sarah Ruiz, PhD
NIDILRR Funding: FY 15 $499,342; FY 16 $499,803; FY 17 $497,472; FY 18 $499,803; FY 19 $497,472

Abstract: The objective of the Collaborative on Health Reform and Independent Living (CHRIL) is to provide disability stakeholders with accurate, current, and actionable information on how recent changes in health policy directly or indirectly impact the community living and participation of working-age adults with disabilities. The CHRIL brings together disability advocates and researchers from four institutions (Washington State University, the University of Kansas, George Mason University, and the Independent Living Research Utilization program at TIRR Memorial Hermann Hospital) to systematically investigate and disseminate essential findings about how the Affordable Care Act’s (ACA) implementation effects adults with disabilities. Specific CHRIL research activities include: (1) Documenting the experiences of working-age adults with disabilities in obtaining and maintaining health insurance, and identifying the impact of insurance on their access, health, and function through phone interviews, internet surveys, and analysis of the Health Reform Monitoring Survey (HRMS); (2) assessing the health insurance information, training, and technical assistance needs of Centers for Independent Living (CILs) and other disability stakeholders through internet surveys, phone interviews of CIL directors, and town-hall meetings at national independent living conferences; (3) analyzing post-reform insurance coverage trends among working-age adults with disabilities using the National Health Interview Survey (NHIS); (4) identifying gaps in coverage and potential areas of undue cost-burden for people with disabilities by analyzing health care expenditures, including premium costs, deductibles, and co-pays using the Medical Expenditure Panel Survey (MEPS); and (5) assessing the impact of the ACA on disability program enrollment and workforce participation by testing how the Medicaid expansion influences SSI activity using the American Community Survey (ACS). The CHRIL engages in knowledge translation activities including: Presenting research findings at professional and scientific meetings; submitting manuscripts for inclusion in scientific and professional journals; offering webinars and creating self-paced tutorials on various aspects of health care policy, organization, and financing; and developing and maintaining the CHRIL website that includes access to all publications and presentations in accessible formats.

Project Number: 90IF0052 (Formerly H133G130149)
Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 13 $199,989; FY 14 $199,984; FY 15 $199,998; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project conducts a clinical trial and evaluation of Safe@Home for individuals with moderate or severe traumatic brain injury (TBI). Many individuals with moderate or severe TBI transition from rehabilitation to home settings with impaired cognition, visuomotor skills, and judgment that place them at risk for subsequent unintentional injury or harm resulting from improper use of equipment, fire, or sharp objects; falls; victimization; loss of money or valuables; or medication errors. Risk is highest in the first 12 months following rehabilitation discharge and often has serious consequences including emergency room visits, hospitalizations, increased disability, reduced independence and life quality, and death. Safe@Home is a person-family education and training program based on a social cognitive theory framework that has been used to develop successful, self-directed health management and injury prevention programs in other medical populations. The specific aims of this project are to evaluate whether the Safe@Home program reduces the number of unintentional injuries and harmful events in the home and community and increases individuals’ with TBI daily hours of self-managed activities. Safe@Home participants receive a personalized risk assessment, tailored education, and in-home training supplemented with mobile communication supports. Individuals with TBI benefit from a program that builds on their strengths, helps set goals, and identifies progressive, achievable steps to reduce unintentional injury and harm and increase their self-managed activities. Family members may anticipate a broader range of safety risks, better identify needed environmental modifications, and have an empirical basis for deciding how best to be involved in (i.e., oversee) activities of individuals with TBI and when to feel comfortable that they can be independent safely.
Parents Taking Action: A Parent Training Intervention for Latino Immigrant Families

The Board of Trustees of the University of Illinois
851 South Morgan Street
M/C 154
Chicago, IL 60607
maganas@uic.edu

Principal Investigator: Sandra M. Magaña, PhD
Public Contact: 312/355-4537; Fax: 312/966-6465

Project Number: 90IF0072 (Formerly H133G140128)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 14 $196,215; FY 15 $199,916; FY 16 $188,110

Abstract: This project evaluates a parent education program designed to meet the needs of Latino parents of children with autism spectrum disorders (ASD). This intervention draws from existing knowledge about autism, treatments, services, and strategies and makes it accessible to the Spanish-speaking Latino community in a culturally competent and cost-effective way. The curriculum for this program is delivered by community health educators and/or promotoras de salud, who are parents of children with autism. Participants are Spanish-speaking mothers who have a child between the ages of 2 and 8 with an ASD and who receive 14 weeks of home visits from the promotora. The promotora delivers intervention content using an interactive approach. The first part of the intervention includes understanding autism symptoms and diagnosis, evidence-based interventions, advocacy, reducing stress, and explaining their child’s behavior to others. The second part of the intervention teaches parents how to reduce problem behaviors and improve their child’s social and communication skills. Measures of caregiver outcomes (family empowerment, caregiver efficacy, and use of targeted intervention strategies) and child outcomes (autism-related symptoms, services received) are collected pre- and post-intervention and at two additional follow-up points.
Access to Success: Replication and Impact of a Training Program Supporting Post-Secondary Students in Requesting Disability Accommodations

The University of Kansas
1000 Sunnyside Avenue, Room 4089
Lawrence, KS 66045-7555
jsummers@ku.edu

Principal Investigator: Jean Ann Summers, PhD; Glen W. White, PhD
Public Contact: 785/864-7602

Project Number: 90IF0082 (Formerly H133G140213)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 14 $199,774; FY 15 $199,774; FY 16 $199,636
Abstract: This project investigates the efficacy of a training program, Access to Success, in supporting postsecondary students with disabilities to request accommodations from community-college faculty and staff, to maximize their opportunity for success in their postsecondary career. Access to Success provides students with disabilities with the knowledge and skills enabling them to advocate for accommodations needed to succeed in their coursework as well as to learn skills that may help gain more independence. The training model, developed through a previous NIDILRR Field Initiated Development Project, includes two components: First, an interactive online tutorial that provides knowledge about (a) students’ rights through the ADA and other legislation, including how to establish eligibility for accommodations in postsecondary settings; (b) self-assessment activities to help students understand their own strengths and needs and the most appropriate accommodations to support them; and (c) an introduction to the seven-step negotiation framework for requesting accommodations, including videos of students demonstrating the skills. The second component emphasizes skills development and consists of an in-person workshop with students, providing negotiation skills practice through role-play scenarios. For this project, researchers investigate whether the training results in more long-term outcomes, related to attitudes toward requesting and using supports, generalized use of the skills taught, and successful completion of courses.
Cooperative Learning and Individualized Mentoring to Build Self-Efficacy, Persistence, and Goal Attainment in Postsecondary African American Students

Southern University and A&M College
Department of Rehabilitation and Disability Studies

Project Number: 90IF0103
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 15 $200,000; FY 16 $200,000; FY 17 $200,000

Abstract: This project develops methods and procedures that maximize the full inclusion and integration into society, employment, independent living, family support, and economic and social self-sufficiency of individuals with severe disabilities, especially those from traditionally underserved groups. Project CLAIM strives to improve the effectiveness of services authorized under the Americans with Disabilities Act, via the conduct of theory-driven research and targeted dissemination activities designed for vocational rehabilitation (VR) clients, their families, communities, practitioners, and employers. Project CLAIM focuses on issues related to employment skills gap from the perspective of educational opportunities, access to multi-disciplinary services, and incorporation of demand-side placement strategies in vocational rehabilitation. The project uses a mixed-methods research study to construct and validate an effective pedagogical framework for promoting self-efficacy, persistence, and goal attainment among African American postsecondary education (AA PSE) students with disabilities. The project ensures achievement of goal by focusing on: (1) Offering of cooperative learning and self-directed career planning opportunities; (2) provision of individualized and culturally sensitive mentoring to assist in adjustment to college life; and (3) identification of modes of integrating needs of employers and AA PSE students with disabilities so that quality employment-related outcomes can be achieved. Project CLAIM utilizes the two well-known and evidence-based pedagogical techniques and two-pronged employment skills development training to guide AA PSE students with disabilities to academic persistence, goal attainment, and job placement: (a) Intervention 1: Cooperative learning, (b) Intervention 2: Mentoring, (c) Intervention 3a: On-campus employment skills development, and (d) Intervention 3b: Community-based employment skills development.

Project Number: 90IF0032 (Formerly H133G120091)
Start Date: October 01, 2012
Length: 36 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 12 $199,696; FY 13 $198,156; FY 14 $199,657; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 7/31/2017)
Abstract: The purpose of this study is to determine the extent to which Project TEAM (Teens making Environment and Activity Modifications) is an effective, socially valid, and feasible intervention that prepares youth with developmental disabilities ages 14-21 to respond to environmental barriers and increases participation in school, work, and the community. Project TEAM is a manualized intervention co-facilitated by a disability advocate and a licensed professional. The intervention includes eight group sessions and two experiential learning field trips. In addition, young adults with disabilities serve as peer mentors on field trips and contact youth weekly to support attainment of goals. Project TEAM outcomes are to: increase youths’ knowledge of environmental factors and modification strategies; reduce the impact of environmental barriers on participation; increase self-efficacy and self-determination; and increase participation in a personal activity goal in the area of education, employment, or community life. This project builds on a participatory action research partnership with disability community stakeholders to address the following research questions: (1) To what extent do youth with disabilities participating in Project TEAM achieve intervention outcomes? (2) What are the characteristics of youth with disabilities who most benefit from Project TEAM? (3) To what extent are goals, procedures, and outcomes of Project TEAM important and acceptable (socially valid) to youth with disabilities?

communitylifeengagement.org

Principal Investigator: Jennifer Sulewski, PhD
Public Contact: 617/287-4356

Project Number: 90IF0075 (Formerly H133G140150)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 14 $599,995; FY 15 $1 (Funds for FY2015 were funded using FY2014 money); FY 16 $1 (Funds for FY2016 were funded using FY2014 money)

Abstract: This project forms, refines, and disseminates a Community Life Engagement Toolkit for state agencies and community rehabilitation providers (CRPs), to guide in the implementation of high quality Community Life Engagement (CLE) for people with intellectual and developmental disabilities (I/DD). The toolkits are piloted with CRPs and states to understand, process, and determine their impact on the desired results. This project supports recent federal rules and policies requiring provision of day and employment services in community-based settings. It supports provision of CLE services that have optimal potential to work in tandem with employment supports toward a full life in the community for people with I/DD. The collaborative development activities of this project include case studies, toolkit development, and pilot testing and refinement. The dissemination activities ensure widespread knowledge transfer and expand the capacity of the field to support people with I/DD toward full community membership.
Recovery 4 US - Development of a Photovoice-Based Social Media Program to Enhance the Community Participation and Recovery of Individuals with Psychiatric Disabilities

Project Number: 90IF0079 (Formerly H133G140190)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 14 $199,895; FY 15 $199,994; FY 16 $199,966
Abstract: This project develops, evaluates, and disseminates a new social media program aimed at the enhancement of community participation and overall recovery of individuals with psychiatric disabilities. Recovery 4 US is an innovative e-mental health program that integrates Internet and mobile technologies and is designed to be a self-sustaining recovery-oriented virtual community for individuals living with a psychiatric disability based on the principles of Photovoice – a public health community-based participatory research method with significant mental health promise. Members of the Recovery 4 US virtual community post their personal experiences of recovery using photographs and corresponding narratives (i.e., Photovoice works) and share their thoughts on the work of others. In addition to building a virtual community based on ongoing Photovoice creation and dialog about posted work, the Recovery 4 US program includes a Meet-Up feature which enables participating members to engage in joint activities, if they so choose, in their actual communities of residence. Finally, the program is designed to provide members with ongoing personal support and encouragement through a mobile phone application which delivers tailored hope-inspiring messages and images to participating members’ smartphones.

Increasing Community Participation Among Adults with Psychiatric Disabilities Through Intentional Peer Support

Advocates for Human Potential, Inc.
490-B Boston Post Road
Sudbury, MA 01776-3365
dpenney@ahpnet.com

Principal Investigator: Darby Penney
Public Contact: 518/729-1225

Project Number: 90IF0098
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 15 $200,000; FY 16 $200,000; FY 17 $200,000

Abstract: This project examines the comparative effectiveness of Intentional Peer Support (IPS) in improving community living and participation for adults with psychiatric disabilities. IPS is a peer-developed, theoretically-based, manualized approach that is unique in conceptualizing peer support as a relationship-based learning process in the context of personal growth and community-building. The study compares IPS practiced at one peer-run program in New York with the standard peer support practiced by staff at a peer-run program in Massachusetts. Using a quasi-experimental design, 125 participants were recruited from the intervention site, where peer support staff have been trained in IPS; another 125 participants were recruited from the second peer-run program, the control site, where standard peer support practices are used. Study participants complete two in-person interviews that assess self-efficacy, self-esteem, self-stigma, social connectedness, community participation, and quality of life. All participants are interviewed at two time-points: within two weeks of initial receipt of individual peer support services and at six months after the first interview. Repeated self-assessments of peer support practices are completed by peer support staff at both sites. Focus groups are conducted with peer support recipients and staff to collect qualitative information on receiving and providing peer support. Randomized regression models and content analyses are used to examine whether any significant differences on outcome measures occur between the groups and are maintained over time. Study results provide important information on how an innovative model of peer support may enhance community living and integration for adults with psychiatric disabilities.

NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 15 $200,000; FY 16 $200,000; FY 17 $200,000

Abstract: This project uses data from the National Core Indicators Program (NCI) to describe and analyze outcomes for people with intellectual and developmental disabilities (I/DD). This project builds on a previous NIDILRR-funded initiative focused on the development and analysis of the NCI Program, the most widely-used program of outcomes for persons with I/DD in the US addressing their community inclusion, employment and other services, health and wellbeing, and choice/rights. Currently, 42 states participate in at least bi-annual NCI-based outcome research on a minimum of 400 randomly selected individuals with I/DD receiving publicly-financed services. The project: (1) utilizes sophisticated research design and analytical approaches including multivariate analysis to examine patterns of factors across outcomes; (2) uses a hierarchical analytic approach to separate out and better account for state-level variability; (3) focuses on areas important to the lives of individuals with I/DD specifically related to community inclusion, employment, health, and rights; (4) explores trends over time using annual data from participating states; (5) disseminates and translates materials, practices, and policies clearly rooted in state-of-the-art analytic work and dissemination technology and formats that are accessible to persons with disabilities and their caregivers; and (6) compares outcomes for individuals with I/DD to outcomes for specific subgroups as well as to the general population. The project team analyzes a combined data set including at least 13,000 people interviewed for the NCI survey in 2013 and subsequent years. Participating states receive validated, psychometrically-tested instrumentation, technical assistance with random selection procedures, standardized training of interviewers, and a centralized system of data quality review, coding, and analysis. This project is a collaborative effort of the University of Minnesota, the National Association of State Directors of Developmental Disabilities Services, the Human Services Research Institute, and the University of Sydney.

Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 13 $199,945; FY 14 $199,937; FY 15 $199,846; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project conducts a randomized, controlled evaluation of an interpersonal violence (IPV) group prevention program designed to meet the unique needs of men and women with intellectual disabilities (ID). Research suggests that a person with ID may be up to 10 times as likely to be victimized as a person without ID. People with ID are at a high risk of experiencing physical, sexual, psychological, and disability-related abuse. Although their work is effective for victimized women, community-based domestic violence and sexual assault victim programs often do not address disability-related abuse nor offer accessible services for IPV crime victims with disabilities. This program, A Safety Awareness Program for Men and Women with Intellectual Disabilities (ASAP), draws upon existing research findings on violence against men and women with disabilities, prior work on a safety awareness group program for women with diverse disabilities, and the strengths of a community-based participatory research approach to develop and evaluate a group prevention modality that responds to the unique needs of people with ID. ASAP consists of eight weekly sessions that provide information on topics such as self-advocacy, self-care, nature and dynamics of IPV, safety planning strategies, healthy relationships, and community resources. Each session also includes interactive activities to enhance self-efficacy and safety-related skills. During the first year, curriculum and measures are adapted to meet the unique language, content, and process needs of men and women with ID. During the following years, the program is implemented and tested in partnership with twelve centers for independent living across the US. Project staff provide comprehensive online training for independent living center staff from each site to serve as ASAP group facilitators.

32 Campus Drive, 4104
Missoula, MT 59812-0001
cravesloot@ruralinstitute.umt.edu

Principal Investigator: Craig Ravesloot, PhD
Public Contact: 406/243-2992

Project Number: 90IF0111
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 16 $199,935; FY 17 $199,989; FY 18 $199,924
Abstract: This collaborative project is investigating the behavioral economics of effort and participation by randomly assigning study participants into either a physical activity intervention to increase personal effort capacity, an environmental intervention to decrease the effort-cost required for bathing, or a control group. Ecological momentary assessment (EMA) is used in situ effort and participation before and after the interventions. The project is also studying how effort is associated with a broader range of personal factors (PF), environmental factors (EF), and choices to participate. This project is helping to build an economic model of disability and participation that begins to specify the relationship between effort capacity, effort cost, and participation choices. Further development of this model will help to further rehabilitation and community living research and practice by providing a framework for helping individuals with disabilities and providers choose interventions that can improve participation outcomes.
Examine Determinants of Community Participation Among Persons with Psychiatric Disabilities

NIDILRR Funding: FY 13 $197,460; FY 14 $199,860; FY 15 $199,378; FY 16 (No-cost extension through 3/31/2017)

Abstract: The objective of this project is to identify individual, housing, and social environment determinants of community participation for people with psychiatric disabilities, in order to guide the development of enhanced services and targeted community stigma interventions geared toward maximizing community participation in this population. Using the Capabilities Framework as a theoretical guide, the project examines how individual, housing, and neighborhood characteristics interact to predict community functioning, helping to identify “optimal fits” between these characteristics to guide the development of targeted programs. Participants include persons with psychiatric disabilities representing a range of socio-economic groups living in supported independent housing and congregate housing with on-site support. The project addresses three related aims: (1) Examine the interaction between housing type (independent scatter-site vs. congregate) and individual-level personal capacity (independent living skills, psychiatric symptoms, substance use, self-efficacy, and coping style) factors in predicting community participation among people with psychiatric disabilities; (2) examine the interaction between social environment characteristics (neighborhood social disadvantage and community stigma) and individual-level personal capacity factors in predicting community participation among people with psychiatric disabilities; and (3) examine the individual-level personal capacity predictors of community participation among people with psychiatric disabilities.
SPAN - A Tool for Social Participation and Navigation

NIDILRR Funding: FY 13 $199,940; FY 14 $199,700; FY 15 $199,971; FY 16 (No-cost extension through 9/29/2017)
Abstract: This project develops and evaluates an intervention, Social Participation and Navigation (SPAN), to facilitate social participation of teens with traumatic brain injury (TBI) by integrating training in social communication, problem-solving, self-regulation skills, and social participation goal attainment planning and monitoring via peer coaches (college students), smart phone apps, and linkages to a virtual community. Teens with TBI often experience limitations in their social participation in school and community activities. Consequences of TBI such as impairments in social, behavioral, and executive functioning, as well as inadequate environmental supports and resources at school and in the community, may contribute to these limitations. Social participation is associated with enhanced quality of life, health, and daily-life functioning across the lifespan in teens with and without disabilities and is a primary rehabilitation outcome. This intervention is developed in three phases. In Phase 1, researchers conduct focus groups and interviews with key stakeholders (teens with TBI, their parents, potential college student coaches, and professional experts) to inform the app and training development. The app and training are developed in Phase 2 and subjected to initial usability testing with teens with TBI, their parents, and peer coaches, with refinements based on results from this testing. In Phase 3, researchers conduct an open-label trial to gather further information regarding usability/feasibility and preliminary efficacy in improving social participation prior to dissemination.

NIDILRR Officer: Timothy Beatty  
NIDILRR Funding: FY 16 $199,859; FY 17 $199,722; FY 18 $199,872

Abstract: This project develops a technology-assisted language intervention (TALI) program that incorporates aided augmentative and alternative communication (AAC) using iPads to improve language in children who are Deaf or hard of hearing (DHH). Project goals include: (1) Demonstrating the efficacy of a technology-assisted language intervention program for improving language outcomes in children who are DHH, (2) testing the relationship between language outcomes and adherence to the TALI program, and (3) evaluating whether the impact of the TALI on language is sustained 6 months post-intervention. Children ages 5-12 are randomized to either 24 weeks of the TALI program or 24 weeks of usual care. The project conducts focus groups with families and stakeholders to understand barriers to interventions and additional outcomes important to families, as well as AAC application monitoring to measure adherence. Outcomes include primary language components of syntax, semantics, and discourse collected from language samples. The final product is a model of evidence-based practice for language intervention that maximizes the full inclusion and integration of children who are DHH into society and allows for social self-sufficiency through improved language skills.

NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 14 $199,674; FY 15 $199,670; FY 16 $199,672
Abstract: This project utilizes the educational and training program In the Classroom (ITC): Supporting Students with Traumatic Brain Injury (TBI) to increase the knowledge and skills of educators related to students with TBI. The program includes: (1) interactive learning modules that offer specific strategies and techniques for managing TBI-related cognitive, behavioral, and social problems in a school setting; (2) the TBI Educator resource center, with printable forms, resource links, and practical tools for the classroom; and (3) Steps to Success, a tool for identifying and evaluating the effectiveness of support strategies. The project uses a randomized control study to establish evidence that the ITC program produces a positive change in student outcomes. Dissemination activities include making the series available to state departments of education, offering the series as an online university class for credit for pre-service and in-service teachers, and making the series available through WETA/Brainline Kids.

**NIDILRR Funding:** FY 16 $199,990; FY 17 $199,994; FY 18 $199,939  
**Abstract:** This project develops and evaluates the Traumatic Brain Injury (TBI) Trainer Skill Builder, an interactive education and training resource for paraprofessionals that addresses the specific needs of individuals with moderate to severe TBI. Individuals with moderate to severe TBI frequently experience significant, long-lasting changes in physical, behavioral, cognitive, and social functioning that affect their participation in activities of daily life at home and in the community. Project activities occur in three phases: development, usability, and evaluation. During Phase I and II, researchers develop and evaluate a prototype of the TBI Trainer Skill Builder resource for paraprofessionals with the goal of promoting knowledge and skill acquisition, ongoing review, and practice and feedback. During Phase III, researchers evaluate the effectiveness of the program through (1) an experimental single case study involving paraprofessionals and individuals with TBI, and (2) a within-subjects product evaluation study involving paraprofessionals and professionals only. The outcome of this project is a fully-developed, evidence-based skills builder that is a cost-effective, accessible resource for paraprofessional to work effectively with adults with TBI.
Internet Safer and Stronger Program for Men with Disabilities (Men’s SSP)

Principal Investigator: Mary Oschwald, PhD
Public Contact: 503/725-9602

Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 13 $200,000; FY 14 $200,000; FY 15 $200,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project conducts a randomized controlled study of an Internet-based violence prevention program, the Safer and Stronger Program for Men with Disabilities (Men’s SSP), which is specifically designed to meet the unique needs of men with diverse disabilities. Community-based programs for interpersonal violence (IPV) prevention and intervention are just beginning their efforts regarding physical and sexual violence against men. However, those programs may not address disability-related abuse, such as the refusal to provide assistance with essential activities of daily living. Additionally, men with disabilities experience multiple barriers to accessing these traditional community-based domestic violence services. The Internet-based Men’s SSP was created by and for men with diverse disabilities. It provides information about IPV against men with disabilities, risk factors, and safety-promoting strategies specific to lives of men with disabilities. The program integrates male survivor stories and affirming narration. During this project, researchers partner with three centers for independent living (CILs) to implement three interrelated studies: (1) The Men’s SPP Pilot Study, which ensures the consistent implementation of the field-test and fidelity of protocols; (2) The Men’s SPP Field-Test Study; and (3) Member-Checking Focus Group Evaluation, designed to provide qualitative feedback about respectively receiving and delivering the Men’s Internet SPP. The Men’s SSP Field-Test is a 3 x 3 (Men’s SSP alone, Men’s SSP in combination with support from a male CIL peer staff, or a control group that will receive an equal-length health promotion Internet program) randomized controlled trial to evaluate the feasibility and efficacy of the Men’s SSP, delivered by CILs alone or in conjunction with support from a peer who is a male staff member with a disability.
Our Lives: Safe and Strong Program Toolkit

Portland State University
Regional Research Institute for Human Services
PO Box 751
Portland, OR 97207-0751
oschwald@pdx.edu

Principal Investigator: Mary Oschwald, PhD
Public Contact: 503/725-9602

Project Number: 90IF0108
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Timothy Beatty
NIDILRR Funding: FY 16 $200,000; FY 17 $200,000; FY 18 $200,000

Abstract: The Our Lives: Safe and Strong (Our Lives) Program Toolkit provides topic-specific, gender relevant, abuse-related training and technical assistance, and specialized training on the best practices of trauma-informed services delivery, to Centers for Independent Living (CIL) staff so they have the knowledge base and skill set necessary to work directly with CIL consumers with disabilities on issues related to interpersonal violence (IPV). The Toolkit is built upon previous field-tested, web-based abuse awareness tools: the Women’s and Men’s Safer and Strong Programs, which provide safety-planning options and resources for people with disabilities related to abuse, mistreatment, and neglect. A six-member CIL Consortium works together to implement and deliver effective IPV prevention and safety-planning supports and services to CIL consumers, and technical assistance to CIL staff to deliver IPV-related program activities. The CIL Consortium includes: Northern West Virginia Center for Independent Living (NWVCIL); Prairie Independent Living Resource Center (PILR) of Hutchinson, KS; REACH Center for Independent Living of Plano, TX; Disability Network Wayne County/ Detroit (DNWCD); Eastern Oregon Centers for Independent Living (EOCIL) of Ontario, OR; and Living Independently in Northwest Kansas (LINK) of Hays, KS.

Project Number: 90IF0086 (Formerly H133G130137)
Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 13 $196,940; FY 14 $196,940; FY 15 $196,940; FY 16 (No-cost extension through 3/31/2017)

Abstract: This project uses a novel community-based intervention, the Independence through Community Access and Navigation (ICAN), to increase community participation and decrease sedentary behavior in adults with schizophrenia spectrum disorders (SSD). Research indicates individuals with SSD spend greater than 90% of their day in sedentary or sleep behavior. Sedentary behavior is a unique and modifiable health risk factor that has a significant impact on the health status and life expectancy of individuals with SSD. The ICAN intervention is a recreational therapy intervention theoretically grounded in Self-Determination Theory that operationalizes an individualized placement and support model to promote independent, community-based recreation participation, which facilitates positive efficacy beliefs. Targeting negative symptoms and sedentary behavior through non-pharmacological interventions is consistent with a recovery orientation to mental health treatment. This project draws from a social psychological framework and from a recent innovative model of cognition and negative symptoms, which proposes negative symptoms result from poor efficacy beliefs. This project examines the outcomes of the ICAN intervention using a randomized control trial. Participants in the experimental group participate in the 6-month ICAN intervention, while the active control participants receive literature about freely available community-based activities and the benefits of participation. Goals of this intensive research study include establishing outcomes and outcome measures for the ICAN intervention; establishing the relationship between negative symptoms and motivation, social functioning, community mobility characteristics, and sedentary behavior; and hypotheses about potential change variables associated with the ICAN intervention.

Identifying Enabling Environments Affecting Adults with Psychiatric Disabilities

Temple University
1700 North Broad Street, Suite 301A
Philadelphia, PA 19122

Principal Investigator: Mark Salzer, PhD
Public Contact: 215/204-7879

Project Number: 90IF0065 (Formerly H133G140040)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 14 $200,000; FY 15 $200,000; FY 16 $200,000

Abstract: This project aims to help people with psychiatric disabilities move from institutional care to more integrated settings and to increase their opportunities to participate in a wide range of roles in their communities by generating knowledge about enabling environments that affect them. The project focuses on utilizing emerging research methods, such as Global Position System (GPS) and geographic information systems technologies, to identify social/environmental characteristics that stimulate and support full and meaningful mobility and participation and facilitate the creation of enabling environments for individuals with psychiatric disabilities. By paying attention to the environment, the project offers a new direction in psychiatric rehabilitation research and focus for policy, program, and
memBRAIN: A Non-Invasive Safety Net that Safeguards Young Adults with Autism Transitioning to Independent Living

CreateAbility Concepts, Inc.
12821 East New Market Street
Carmel, IN 46032
steve@createabilityinc.com

Principal Investigator: Stephen M. Sutter 317/777-0356
Public Contact: 317/564-4677; Fax: 317/484-8401

Project Number: 90BI0032
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $75,000
Abstract: This project combines commercially-available modules with cloud computing and state-of-the-art software to develop the memBRAIN system to assist young adults with autism spectrum disorders (ASDs) to safely and effectively transition into independent living. memBRAIN is a non-invasive safety net appliance that detects and reports abnormal behavior to parents and other remote caregivers. Project objectives include: (1) determining end user requirements, (2) developing a proof-of-concept prototype of the system, and (3) evaluating the utility of the prototype with actual young adults who represent a cross-section of functional limitations and their parents. By using memBRAIN, young adults with autism can transition to living independently and safely in the community of their choice, while their parents can keep track of their progress without impacting their independence.
Anxiety Coach for Children:  
A Tool to Increase Community and Educational Participation

Minnesota HealthSolutions  
976 Summit Avenue  
Saint Paul, MN 55105  
sara.seifert@yahoo.com

**Principal Investigator:** Sara Seifert  
**Public Contact:** 612/803-6998

**Project Number:** 90BI0035  
**Start Date:** September 30, 2016  
**Length:** 6 months  
**NIDILRR Officer:** Brian Bard  
**NIDILRR Funding:** FY 16 $74,998

**Abstract:** This project develops a mobile device and/or web-based coaching tool that provides evidence-based therapeutic strategies for children with anxiety disorders with the goal to improve independence and participation in daily activities. Anxiety disorders are among the most common childhood mental health diagnoses with lifetime prevalence rates ranging from 15% to 20%. Additionally, anxiety disorders that develop in childhood generally follow an unchanging course leading to additional psychological concerns that interfere with social, emotional, and academic development. Coaching activities and strategies provide guidance, and empower and enable children and families to treat anxiety symptoms while utilizing popular and readily available devices. Using a mobile device or website makes the system available to children and caregivers when and where it is most useful. Potential applications include direct use of the tool by patients via their mental health care provider, integration of the tool into supervised wellness platforms, and independent use by families.
Development and Evaluation of the Online and Applied System for Intervention Skills

Integrated Behavioral Technologies, Inc.
1106 North 155th Street, Suite B
Basehor, KS 66007-7100
katrinaostmeyer@ibt-inc.org

Principal Investigator: Katrina Ostmeyer-Kountzman, PhD
Public Contact: 913/417-7061

Project Number: 90BI0024
Start Date: September 30, 2015
Length: 24 months
NIDILRR Officer: Brian Bard

Abstract: This Phase II project refines and tests a learning management system (LMS), the Online and Applied System for Intervention Skills – Supervision (OASIS-S). OASIS-S is a cloud-based portal that incorporates two modules (online and skill-based activities) for the supervision of individuals in service fields that require post-degree supervision and/or seeking certification as behavior analysts. This system incorporates each element of a good supervision experience such as (1) providing structure for group and individual supervision meetings, (2) informational tutorials in targeted competency areas, (3) pre/post-test assessments for supervisee’s knowledge and skill application, (4) an online “home” for uploading supervision documents/videos, and (5) a “classroom” discussion board to build cohorts of professionals. For supervisors, this system includes (1) supervisory access to monitor progress and competency levels, (2) an avenue for distance supervision documentation, and (3) a means of managing supervision activities from a distance. For employers, this system offers a comprehensive database that provides administrators with the ability to monitor employees’ professional development activities, and a way to manage costs associated with providing services and supervision experiences to employees in the field and/or those who live and provide services in geographic areas removed from the central office. This project builds upon the original OASIS-S 14 topic areas and expands the program to include 17 supervision topic areas, each with pre- and post-tests, interactive lessons, an assignments that provide object measures of targeted behavior analytic kills in each topic area. The LMS includes functional tools to share video and performance feedback, and house important supervision documents, including a functional online graphing and scoring system for students and supervisors to gauge progress.

Principal Investigator: Thomas Keating, PhD
Public Contact: 541/342-3763; Fax: 541/342-4310

Project Number: 90BI0008 (Formerly H133S140096)
Start Date: October 01, 2014
Length: 24 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 14 $286,001; FY 15 $288,719; FY 16 (No-cost extension through 9/29/2017)
Abstract: This is a Phase II project to develop and evaluate the effectiveness of a responsively designed web application, Goal Guide, that enables individuals with intellectual disabilities and autism to effectively manage self-defined goals for everyday living across personal, educational, and vocational life domains. Users will be able to easily enter goals, work with data for each goal, engage with information displays that communicate progress, and complete the self-management loop by self-monitoring progress and linking it with contingent incentives that they have defined. The primary interface for users with cognitive disabilities resides on the mobile device while teacher and parent interfaces emphasize shared access to oversee usage, receive notifications, and provide assistance as needed. Cognitively accessible self-management applications offer an untapped resource to augment the functional ability of individuals with disabilities who cannot use typical commercial applications because of inability to work with interfaces that are text-based and cognitively complex. Participants include 30 individuals with mild to moderate intellectual disabilities and autism aged 18-21 in a postsecondary program focused on teaching daily living skills, employment, and social skills toward successful transition to adulthood.
Maximizing health and function among people with disabilities is critical to the achievement of NIDILRR’s mission and the associated higher-order goals of employment and community participation. Functional ability reflects the complex interaction between individuals and the environments in which they live. NIDILRR supports centers and projects on health and function that improve understanding of health status, health needs, and health care access of individuals with disabilities. These centers and projects also develop and test interventions, including public policy interventions, to improve health outcomes, increase or maintain functional abilities, and contribute to more effective medical rehabilitation and long-term services and supports, including integrated health and long-term services and support approaches.

Abstract: The Rehabilitation Research Training Center (RRTC) on Psychiatric Disability and Co-Occurring Medical Conditions conducts a series of projects to identify and reduce health disparities among people with psychiatric disabilities while promoting wellness and recovery, enhancing employment outcomes, and providing targeted education and training. Research projects include a seven-state health screening of people with psychiatric disabilities to estimate the prevalence of medical co-morbidities and people’s health care needs. Also included are two randomized controlled trial studies on: (1) an electronic decision support system to motivate smoking cessation treatment, and (2) the Georgia Peer Support Whole Health model to determine its effectiveness in helping people set and achieve personal health goals. Another project involves assessment of the impact of using a disease registry to improve health and mental health care coordination for people with co-occurring diabetes and psychiatric disabilities. The final research project involves developing and testing a new model combining evidence-based practice-supported employment with peer wellness promotion. Training projects include adaptation of an evidence-based weight management intervention into a curricular format for use by clinicians and peer providers, as well as a how-to health screening manual to be tested in three locations to promote public policy shifts that improve medical care. Another program equips medical students and residents with knowledge about evidence-based medicine when treating co-occurring psychiatric disability and medical conditions. Also offered is an on-line instructional program, as well as the creation and evaluation of a web-based employee wellness program for a peer workforce employed in five states. Finally, the Center is convening a state-of-the-science national conference in 2014 resulting in a comprehensive report.

Project Number: 90RT5020 (Formerly H133B130007)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 13 $874,992; FY 14 $874,992; FY 15 $874,999; FY 16 $874,992; FY 17 $874,994

Abstract: This project enhances the health and function of adults with intellectual and developmental disabilities (I/DD) over their lifespan through a coordinated set of research, training, technical assistance, and dissemination activities. The goals of the center are to (1) increase the understanding of health status, health access, and health behaviors of adolescents and adults with I/DD; (2) improve the health and function of persons with I/DD through health promotion interventions; and (3) improve health care access through integrated care practices. Research activities include, but are not limited to, national database analyses of the Medical Expenditure Panel Survey, the National Health Interview Survey, Survey of Child Special Health Care Needs, and the Survey of Adult Transition and Health; a continuing prospective cohort study of health behaviors on health and function over a 10-year period, including minorities with I/DD; the development of a technology-based intervention to reduce obesity; and evaluation of the scaling up of the evidence-based “Health Matters” exercise and nutrition program for individuals with I/DD developed by the project, under a previous grant. The Center includes a prospective study to assess the impact of changes in health and long-term practices to health and function, health care access, preventative services, and satisfaction of adults with I/DD in the process of a change from fee-for-service to integrated health and long-term care with specific analyses targeting persons with diabetes, heart disease, and Alzheimer’s disease. The project’s innovative training and technical assistance approaches include (1) dissemination through national provider, professional, and consumer collaborations; (2) development of user-friendly products in various formats; (3) use of the train-the-trainer and peer training models to promote local ownership of effective practices; (4) targeted promotion of systemic changes that maintain programmatic and policy changes; (5) leadership in national task forces; and (6) use of web-based technologies to provide global access to knowledge and training products, including dissemination through the project’s website, the National Center on Health, Physical Activity and Disability, and the Health Matters Program; and (7) provision of certificate programs in disability and health promotion. This project continues its leadership role in increasing the self-determination of adults with I/DD and their families by involving consumers in all phases of its research, training, and dissemination activities.

**Start Date:** October 01, 2014
**Length:** 60 months
**NIDILRR Officer:** Sarah Ruiz, PhD
**NIDILRR Funding:** FY 14 $874,864; FY 15 $874,768; FY 16 $874,820; FY 17 $874,793; FY 18 $874,782

**Abstract:** This RRTC develops and tests innovative strategies to enable people with disabilities to achieve and maintain their optimal health and function; assesses the optimal dosing, cost-effectiveness, and value of selected approaches to achieve and maintain their health and function; and disseminates information regarding these strategies to various stakeholders. Specific project objectives include: (1) establishing and operating a coordinated, comprehensive, and interdisciplinary Center comprised of a team of specialists with expertise in clinical rehabilitation and research methodology; (2) evaluating the contributions of the task-specific training parameters, intensity, and variability on lower extremity function post-stroke; (3) evaluating the impact of focused, intensive training applied during clinical inpatient physical therapy on mobility outcomes, health, and community participation in patients with acute neurological injury; (4) conducting a randomized clinical trial to compare the efficacy and cost-effectiveness of two different dosing methods for providing an Intensive Comprehensive Aphasia Program; (5) developing and evaluating the feasibility, acceptability, and effectiveness of a targeted evidence-based Peer Health Navigator program for Medicaid beneficiaries with physical disabilities; and (6) assessing the economic and social value of each proposed research intervention. This project also conducts knowledge translation activities and builds research capacity through educating future generations of disability researchers, professionals, people with disability and their families, and the general public, by providing them with the tools and training they need to be able to understand important information regarding health, function, community living, and research methods.

NIDILRR Funding: FY 15 $574,951; FY 16 $574,991; FY 17 $574,986; FY 18 $574,937; FY 19 $574,927
Other Funding: FY 15 $300,000 (Substance Abuse and Mental Health Services Administration (SAMHSA)); FY 16 $300,000 (SAMHSA); FY 17 $300,000 (SAMHSA); FY 18 $300,000 (SAMHSA); FY 19 $300,000 (SAMHSA)

Abstract: This project creates, modifies, and improves self-directed models of medical care and mental health services that promote recovery, health, and employment for people with psychiatric disabilities. The goal of the center is to improve employment outcomes, stimulate the development of self-directed recovery models that are peer-led, and enhance the health and well-being of people with mental illnesses and co-occurring medical conditions. Research activities include: a multi-site randomized controlled trial of self-directed care for adults with psychiatric disabilities in the states of Texas and Florida; development and testing of a new intervention designed to help people with serious mental illnesses self-manage their physical health while working toward recovery of their emotional wellness; an evaluation of costs, medical service utilization, and 30-day readmissions following discharge from medical hospitalizations using the national Truven Health Analytics MarketScan Multistate Medicaid Database; development of a transition intervention that supports patients as they move from the hospital to the community, using teams of community health workers and certified mental health peer specialists; and evaluation of the impact of personal budgets called Career Accounts on the employment outcomes of individuals receiving evidence-based supported employment services designed to help them secure a competitive job. The center implements the UIC Health & Recovery Solutions Practice, Policy, and Science Exchange to promote knowledge translation through training, dissemination, and technical assistance. Each component of the Exchange is designed to meet the specific needs of its audience with varied dissemination, training, or technical assistance formats of appropriate duration and intensity. The Health & Recovery Solutions Suite is a set of tools, curricula, and manuals that will help people with psychiatric disabilities,
their supporters, service providers, and policymakers to promote self-directed recovery of health and wellness. The Health & Recovery Solutions Policy Academy utilizes modalities that are tailored to the needs of human service system designers, including a policymaker mentoring initiative, legislative action alerts, and an online technical assistance web portal staffed by experts in state systems change and transformation. The Health & Recovery Solutions Science Showcase is intended to meet the needs of researchers, scholars, and students by informing them about the Center’s research and evaluation projects, highlighting research tools, featuring recent publications on self-directed recovery and healthcare integration, and offering podcasts and free mini-courses on disability research topics. The center will also convene a state-of-the-science national conference in 2018, focusing on self-directed health and mental health care, integration of health and behavioral health care, and self-determination in the vocational rehabilitation process.

NIDILRR Funding: FY 09 $799,337; FY 10 $799,915; FY 11 $799,884; FY 12 $799,542; FY 13 $799,682; FY 14 (No-cost extension through 9/30/2015); FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 9/29/2017)
Abstract: This project addresses the need for interventions for children and youth with traumatic brain injury (TBI). Interventions designed for this population must: (a) target the continuum of service delivery; (b) address the changing needs of the population; and most importantly, (c) include tools, training activities, and dissemination mechanisms for all of the “everyday” people who support children and youth. Project research identifies a reliable and valid measurement battery for assessing functional improvements arising from TBI interventions; and initiates a national, shared database of TBI outcomes data. This RRTC: (1) evaluates specific interventions to improve cognitive, behavioral, and psychosocial outcomes with a range of children and youth with TBI through randomized clinical trials; (2) evaluates the effectiveness of the validated interventions in natural settings; and (3) uses multi-method evaluations of the efficacy of training, technical assistance, and dissemination activities to verify the utility of the final products.

Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 09 $794,504; FY 10 $797,646; FY 11 $791,037; FY 12 $794,494; FY 13 $786,639; FY 14 (No-cost extension through 9/30/2015); FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 5/31/2017)

Abstract: The RRTC combines an integrated program of research to identify risk and protective factors for secondary conditions in spinal cord injury (SCI) with a systematic program of education, training, dissemination, and technical assistance. This program allows new knowledge to be directly translated into prevention strategies at the policy, rehabilitative, clinical, community, and individual consumer levels. The key to prevention of secondary conditions is to first identify to whom they occur and why, then to widely educate and disseminate new knowledge to professionals and consumers in a format they can directly use in the prevention of secondary conditions. Through three research studies, integrating two theoretical models of risk of secondary conditions, the project identifies the risk and protective factors that put the greatest number of individuals at risk for the greatest number of conditions. Study 1 is a longitudinal follow-up of 2,548 participants who completed an extensive assessment of risk and protective factors for secondary conditions that include adverse events (e.g., pressure ulcers, hospitalizations), chronic conditions (e.g., pain, fatigue), and psychosocial conditions (e.g., depressive disorder). A new cohort is also being added to the study, comprised of those who are more recently injured (no less than 500 participants). The study examines the stability of secondary conditions and identifies psychological,
environmental, and behavioral predictors of future episodes of secondary conditions. Study 2 identifies the association of access to health services, including initial rehabilitation services (i.e., inpatient, outpatient only, no rehabilitation), with presence of secondary conditions. By using two population-based cohorts, with an anticipated 1,500 responses, this study identifies the role of access to services among those with the fewest resources as they are at greatest risk for secondary conditions. Study 3 utilizes a 17-year follow-up among approximately 150 participants from Rancho Los Amigos National Rehabilitation Center, along with approximately 200 more recently injured individuals, to investigate the stability of metabolic syndrome over time and its relationship with risk and protective factors, and with secondary conditions including pain, fatigue, and a depressive disorder.
University of Washington Rehabilitation Research and Training Center on Promoting Healthy Aging for Individuals with Long-Term Physical Disabilities

Principal Investigator: Ivan Molton, PhD 206/543-3602
Public Contact: Amanda Smith 866/928-2114; Fax: 206/685-3244

Project Number: 90RT5023 (Formerly H133B130018)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Sarah Ruiz, PhD
NIDILRR Funding: FY 13 $875,000; FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $875,000

Abstract: This project is devoted to better understanding the factors associated with healthy aging in persons with spinal cord injury (SCI), multiple sclerosis (MS), late effects of polio (PPS), and muscular dystrophy (MD). Research activities focus on the impact of secondary conditions and barriers to health care access; testing the feasibility of community-based health and wellness intervention to promote healthy aging in persons with SCI, MS, PPS, and MD; developing an intervention to promote positive psychological adjustment in persons with MS; enhancing understanding of the effect of federal programs such as Medicaid Managed Care on receipt of and satisfaction with health care services; and serving as a national resource center on aging with long-term physical disabilities. Four interrelated scientific studies on healthy aging and disability make up this project and are conducted with the full involvement of consumers and key stakeholder groups. Project I continues a recently-completed, longitudinal survey of 1,600 individuals with long-term physical disabilities, creating the largest longitudinal database of secondary health conditions in the target population. Project II tests the efficacy of an existing, empirically-supported health and wellness intervention in promoting healthy aging for adults with SCI, MS, MD, or PPS in collaboration with a large, regional community senior services agency. Project III develops and pilot tests a novel intervention designed to promote positive psychological factors that are key to healthy aging in individuals with MS. Project IV builds on an existing study of Medicaid Managed Care to evaluate the impact of Medicaid Managed Care on health care utilization, function, and consumer satisfaction in a sample of more than 14,000 individuals with long-term physical disabilities. Dissemination activities include (1) holding a state-of-the-science conference on aging with disabilities; (2) publishing the findings from the studies in national and international journals; and (3) presenting the findings at high profile scientific conferences in the field. This project plans for knowledge translation to occur through pre-service curricula, national consumer organizations, and web-based platforms.
Dose-Response Effects of Transformative Exercise in Improving Health and Function in Adults with Spinal Cord Injury and Multiple Sclerosis

The University of Alabama at Birmingham
School of Health Professions, SHPB 331
1720 Second Avenue South
Birmingham, AL 35294-3361
jrimmer@uab.edu

Principal Investigator: James H. Rimmer, PhD
Public Contact: 205/975-9010; Fax: 205/975-7787

Project Number: 90DP0059 (Formerly H133A130044)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 13 $475,000; FY 14 $475,000; FY 15 $475,000; FY 16 $475,000; FY 17 $475,000

Abstract: This project consists of three overlapping studies focused on developing and implementing sustainable and effective approaches to improving health and function in people with spinal cord injury (SCI) and multiple sclerosis (MS). The first study (R1) develops and conducts a longitudinal trial focused on prospectively examining the relationships between variables such as sociodemographics, physical activity, diet, health outcomes, and environmental and sociocultural factors in a longitudinal cohort of 120 adults with SCI and 120 adults with MS. Each participant receives twice-yearly assessments via questionnaire and annual laboratory health/physical function tests. Anticipated outcomes include increased knowledge of variables that affect the health trajectories of people with SCI and MS as well as a data-driven framework for the development and testing of interventions to address secondary health conditions, functional deficits, and quality of life in people with disabilities. The second study (R2) is a randomized controlled trial examining the dose-response effects of two types of innovative group exercise classes on the health and functional status of adults with SCI and MS, and determines the relationship between gains in physical function and health status in this population. Finally, the third study (R3) utilizes a tele-health exercise training and monitoring system (e.g., tele-exercise) in translating clinical findings into a home-based exercise program addressing the needs of adults with SCI and MS which is supervised via a remote tele-coach.
A Lifestyle Intervention Targeting Enhanced Health and Function for Persons with Chronic SCI in Caregiver/Care-Receiver Relationships: Effects of Caregiver Co-Treatment

University of Miami
1320 South Dixie Highway, Suite 650
Coral Gables, FL 33146-2919
mnash@med.miami.edu

Principal Investigator: Mark Nash, PhD
Public Contact: 305/243-3628

Project Number: 90DP0074
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 15 $498,572; FY 16 $497,183; FY 17 $498,908; FY 18 $499,403; FY 19 $484,761

Abstract: This project evaluates and tests a population-specific lifestyle intervention (LI) in persons with spinal cord injury (SCI) that significantly improves fitness, lessens the risk of cardiometabolic disease, and reduces body mass thus improving the execution of daily activities. An increase in body mass occurring early after SCI is widely reported to decay lifelong health and function. Obesity/overweight affects nearly 70 percent of the SCI population, imposing earlier and disproportionate risks for healthy-decaying cardioendocrine disease, inflammatory stress, musculoskeletal pain, and functional decline. These risks also impose significant physical and emotional stress on the caregivers of people with SCI, who are progressively challenged to maintain a reserve of health and function as they also age. Project goals include: (1) testing the impact of a model LI program on attributes of health and function that are recognized to compromise healthy aging in persons with SCI living in caregiver/care-receiver relationships, (2) examining the impact of the LI on the relationship of the caregiver/care-receiver dyad, and (3) determining whether co-intervention with the caregiver improves health/function for their partner. This two-center, randomized, parallel group, wash-in controlled study enrolls 60 men/women ages 18-65 with SCI for more than one year. Their caregivers are co-enrolled, and are defined as family members, significant others, or friends who provide social and/or physical support including personal assistance, routine emotional encouragement, and/or social interaction. All participants with SCI undergo an intense, 6-month LI program incorporating circuit resistance training, Mediterranean-style diet, and a customized 16-session behavioral intervention. A 6-month minimally supervised extension tests intervention durability. Half of the caregivers undergo a comparable, caregiver-targeted exercise, nutrition, and behavioral intervention; and the remaining caregivers receive a compilation of general exercise and nutrition recommendations vetted by medical and nutritional authorities. The outcomes for participants with SCI are examined for body mass and fitness; biomarkers of cardioendocrine risk and inflammation; function; multidimensional pain; and health-related quality of life, treatment acceptance, and symptoms of anxiety, and depression. Caregiver participants are evaluated for their function, multidimensional pain, and...
and health-related quality of life, caregiver burden, life satisfaction, anxiety, and treatment acceptance. A Consumer Advisory Board and Medical Monitor evaluates project progress and information, which is disseminated through consumer conferences, scientific presentations, juried manuscripts, web-based media, and conference symposia attended by health care professionals.
Robot-Aided Diagnosis, Passive-Active Arm Motor and Sensory Rehabilitation Post Stroke

Rehabilitation Institute of Chicago (RIC)
345 East Superior Street, Room 1406
Chicago, IL 60611
l-zhang@northwestern.edu

Principal Investigator: Li-Qun Zhang, PhD
Public Contact: 312/238-4767; Fax: 312/238-2208

Project Number: 90DP0069 (Formerly H133A140065)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $499,930; FY 15 $499,930; FY 16 $499,720; FY 17 $499,829; FY 18 $499,678

Abstract: This project develops a custom rehabilitation system to provide a robot-aided diagnosis and passive-active arm motor and sensory rehabilitation post stroke. Project objectives are threefold: (1) quantify the progression of neuromechanical properties throughout the upper extremity during recovery from stroke, (2) address allocation of therapy resources between the arm and hand, and (3) examine the benefits of combining passive stretching with active movement training. Custom devices are employed to both perturb and measure the arm and hand. The data captures the timeline for the advent of specific complications such as spasticity in the different joints and the extent to which they change over time and provides a guide for future treatment. The project investigates and assesses a rehabilitation paradigm for targeting the entire upper extremity, rather than just the arm or just the hand. Both passive stretching and active movement therapy are implemented by two unique devices, the IntelliArm and the X-Glove. The multi-joint IntelliArm rehabilitation robot is capable of controlling and measuring the shoulder, elbow, and wrist simultaneously in order to carry out multi-joint sensorimotor characterizations, forceful stretching, and robot-guided active movement training. The X-Glove robot independently actuates each digit, allowing for stretching and movement assistance customized for each digit. Subacute stroke survivors participate in a blinded, controlled longitudinal intervention trial. Outcome evaluations in stroke survivors capture changes both in clinical measures of upper extremity performance and in neuromechanical properties. The results provide important data for deciding how best to devote limited resources to therapy.
Motivating Self-Management Through Multi-Media Health Promotion

University of Montana
32 Campus Drive Main Hall
Missoula, MT 59812-0001
craig.ravesloot@mso.umt.edu

Principal Investigator: Craig Ravesloot, PhD
Public Contact: 406/243-2992

Project Number: 90DP0073
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Amanda Reichard, PhD
NIDILRR Funding: FY 15 $499,811; FY 16 $499,999; FY 17 $499,780; FY 18 $499,815; FY 19 $499,952

Abstract: This project develops two online, multimedia products that community-based agencies can use to deliver state-of-the-art health promotion services to people with disabilities living in the community. The first product, Multi-Media Living Well with a Disability (MMLWD) is based on the 4th edition of Living Well with a Disability curriculum created by the Research and Training Center on Disability in Rural Communities. The second product, Motivation for Self-Management, is a new multimedia health promotion module based on Self-Determination Theory that increases consumer motivation and confidence for engaging in self-management. These products help to improve the health of people with disabilities by increasing accessibility to evidence-based health promotion curricula that has been shown to be cost-effective for reducing limitation due to secondary conditions. While not focused solely on rural populations, this project partners with long-term collaborator, the Association of Programs for Rural Independent Living (APRIL), who has recruited eight Centers for Independent Living to participate on one of two development teams. These centers are located in urban areas across the country but also provide services to rural areas using satellite offices (e.g., Atlanta, Los Angeles, and Houston). These development teams work in parallel to develop each online multimedia curriculum using an Iterative Participatory Curriculum Development (IPCD) procedure. Knowledge translation activities include new training and technical assistance procedures, and along with outcome results, are widely disseminated to a variety of community-based programs (e.g., Aging and Disability Research Centers) and health promotion researchers.

Project Number: 90DP0025 (Formerly H133A120004)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 12 $900,000; FY 13 $900,000; FY 14 $900,000; FY 15 $900,000; FY 16 $900,000

Abstract: This project addresses lack of training in wheelchair use and maintenance provided to individuals with spinal cord injury (SCI) through randomized controlled trials of two training interventions: the Wheelchair Skills Program (WSP) and the Wheelchair Maintenance Training Program (WMTP). The WSP includes an assessment, the Wheelchair Skills Test (WST), and a training protocol (WSTP). This project: (1) tests the ability of the WSTP to improve manual wheelchair skills in individuals with chronic SCI; (2) refines and tests the WMTP, a readily translatable intervention to improve the maintenance of manual and power wheelchairs by users with SCI and their caregivers; (3) identifies the relative benefits of the combination of WSP and WMTP on quality of life of wheelchair users; and (4) develops and tests readily accessible web-based training programs for clinicians to learn the WSP and WMTP. By improving training in use and maintenance, the project aims to reduce wheelchair breakdowns and repetitive strain injuries for manual wheelchair users.
Promoting Independence and Self-Management Using mHealth

Public Contact: 412/383-6649

Project Number: 90DP0064 (Formerly H133A140005)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 14 $499,911; FY 15 $499,562; FY 16 $499,291; FY 17 $499,619; FY 18 $499,581

Abstract: This project develops and implements mobile health (mHealth) tools to support self-management and aid youth with brain and spinal anomalies (BSA) in their transition to adulthood. Individuals with developmental BSAs, who may have impairments in self-management skills, are susceptible to secondary conditions. The early teen years are a developmentally appropriate time in one’s life to seek separation from one’s parents and gain full independence with regard to self-management. Many teens fail to develop the self-management skills necessary to independently manage medical and self-care routines. One major barrier identified was the lack of developmentally appropriate tools to help in this transition. The mHealth tools incorporate mechanisms for caregiver and family involvement and peer support. This project builds upon previous research with a self-management pilot project for individuals with spinal bifida, implementing the mHealth supported self-management program in a community setting, and developing educational support for participants.
Innovation in Disability Empowerment and Service Delivery

The University of Pittsburgh
400 North Lexington Street, Suite LL104
Pittsburgh, PA 15208-2574
dicianno@pitt.edu

Principal Investigator: Brad Dicianno, MD
Public Contact: 412/648-6666

Project Number: 90DPGE0002
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Sarah Ruiz, PhD
NIDILRR Funding: FY 16 $499,960; FY 17 $496,919; FY 18 $497,153; FY 19 $492,835; FY 20 $481,355

Abstract: This project’s overall objective is to identify potential models of healthcare delivery for individuals with disabilities that are effective in improving health and the patient experience of care, while reducing cost (Triple Aim). The project includes a systematic review of the research and health policy literature to identify innovative health service delivery models that offer long-term support services to people with disabilities and that are supported by evidence-based research, actionable policies, or both. Three rigorous research projects evaluate the impact of three different models of care on the Triple Aim: (1) a community-based care management program delivered by a non-profit organization through waiver funds, (2) the Program for All-Inclusive Care for the Elderly (PACE) applied to younger individuals with disabilities between ages 55-64, and (3) a state-of-the-art mobile health platform that supports community-based service delivery. A development project with participatory action design refines the existing mobile health system to support the third research project. Evidence-based studies demonstrate that delivering services via non-profit organizations or through PACE models of care have the potential to positively impact outcomes for people with disabilities. The main barrier that has prevented these programs from being fully implemented outside of research has been lack of integration into a system that can support financial sustainability. To overcome these barriers, this project includes partnerships between an integrated delivery system and community-based programs, identifying promising aspects of delivery systems, and proposing plans for implementation.
A Multidisciplinary Approach to Translating New Knowledge into Practice to Promote Health and Well-Being after Spinal Cord Injury

Medical University of South Carolina
College of Health Professions
Department of Health Science and Research
151-B Rutledge Avenue

Project Number: 90DP0098
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 16 $149,877; FY 17 $149,894; FY 18 $149,867

Abstract: This project translates new scientific knowledge relating to health and function to reduce risk of secondary health conditions (SHCs) and other health complications after spinal cord injury (SCI) by developing automated individualized risk profiles for use by consumers with SCI and interdisciplinary healthcare providers. This addresses a key limitation in current knowledge translation practices and utilization tools which are typically general in nature, such as factsheets, videos, or other self-help information. This project uses data on over 5,000 participants related to risk and protective factors for SHCs and other health outcomes, previously gathered under the NIDILRR-funded Rehabilitation Research and Training Center on SHCs after SCI, to develop the automated individualized risk profiles, as well as factsheets for those who do not have Internet access. Stakeholders, including those with SCI, health professionals, and those who work with SCI registries, identify the conditions upon which to focus, the types of formats and appropriateness of the tools for different environments and end-users, and the usefulness of the tools. The project includes the following activities: (1) convene stakeholder groups to identify the most important areas of focus, (2) develop the automated tools, (3) reconvene stakeholder groups throughout the project to evaluate the tools, (4) disseminate the tools through stakeholder, institutional, and public health agencies, and (5) evaluate the utility of the tools within those settings. The project collaborates with several stakeholder organizations including the RRTC on Independent Living at the University of Kansas, the South Carolina SCI Association, AccessAbility (local ILC), Roper Hospital, the Minnesota Department of Health, and the South Carolina SCI Surveillance System.
Multicenter Evaluation of Memory Remediation After Traumatic Brain Injury with Donepezil (MEMRI-TBI-D)

Length: 60 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 13 $600,000; FY 14 $600,000; FY 15 $600,000; FY 16 $600,000; FY 17 $600,000

Abstract: This project evaluates the effectiveness of donepezil as treatment for traumatic brain injury (TBI)-related memory deficit. The study is a four-site, randomized, parallel design, double-blind, placebo-controlled, 10-week trial of donepezil 10 mg daily for verbal memory problems among adults with TBI in the sub-acute or chronic recovery period. The study recruits persons with TBI and functionally important memory problems during a four-year period of open recruitment to evaluate the effects of treatment with donepezil on verbal memory. Additionally, the study evaluates the effects of treatment with donepezil on memory-related activities. Data is collected assessing the effects of donepezil on attention, processing speed, neuropsychiatric symptoms, community participation, quality of life, and caregiver experiences.

**Abstract:** The goal of this project is to provide a multidisciplinary comprehensive system of care for individuals with burn injury that spans the complete continuum from preventative programs and emergency services to community reintegration and vocational rehabilitation, and fosters burn injury rehabilitation research. The project includes a site-specific project to treat pain, itch, and psychological impairments in burn injury using transcranial Direct Current Stimulation (tDCS), a novel, noninvasive method of brain stimulation. The project also contributes to the Burn Injury Model System national database to facilitate the comprehensive longitudinal assessment of burn injury outcomes. In addition, the Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center. The project is a collaboration of clinical and research resources of Harvard Medical School, Partners Healthcare System (Spaulding Rehabilitation Hospital, Massachusetts General Hospital), and Shriners Hospitals for Children.

NIDILRR Funding: FY 12 $383,000; FY 13 $383,000; FY 14 $383,000; FY 15 $383,000; FY 16 $383,000

Abstract: This project provides comprehensive, multi-disciplinary services to children and adults who sustain major burn injuries from the time of injury to long-term follow-up. The project contributes data to the Burn Model System national database, including follow-up data on eligible subjects at 6 months, 1, 2, 5, and 10 years, and extends follow-up to every 5 years thereafter. North Texas Burn Rehabilitation Model System (NTBRMS) includes a quarterly rural satellite clinic to serve the needs of those patients who cannot return to the burn center for a follow-up. The project includes two site-specific studies: (1) The Effect of Heat Intolerance on Exercise and Physical Function, a prospective, randomized single-center study on the efficacy of an exercise intervention and outcomes relating to heat intolerance among survivors of a burn injury to assess if perception of heat intolerance and the related fear of exercise among burn survivors changes following an exercise intervention; and (2) The Evaluation of a Web-Based Social Skills Training Program for Burn Survivors, a program that is designed to assist burn survivors who have a disfigurement in preparing for social situations after leaving the hospital. The NTBRMS collaborates with the Model System Knowledge Translation Center in planning its dissemination activities and providing scientific results and information to clinical and consumer audiences by participating in its systematic reviews of evidence and development of consumer factsheets. Other dissemination efforts include state-of-the-science meetings, several webinars, and other materials.

Abstract: This project builds upon past efforts to address significant issues of concern to burn survivors – pain management, distress, hypertrophic scarring, community re-entry, and return to work. In addition to participation in the long-term outcomes national database, the project includes one major dissemination project and one site-specific research project. Project 1 – Return to Work After Burn Injury Website Dissemination Project utilizes web-based dissemination efforts to provide education regarding challenges and processes encountered following a significant burn injury. Project 2 – Impact of Hypnosis on Post-Burn Pain and Itch: Randomized Controlled Trial utilizes expertise in clinical management of pain and itch, and experience with hypnosis as an innovative non-pharmacologic intervention. The control group receives pharmacologic treatment using an established treatment algorithm for post-burn itch; the experimental group undergoes hypnosis as well as a standard treatment regimen.

Abstract: The University of Alabama Spinal Cord Injury Model System (UAB-SCIMS) spans the clinical continuum from emergency services through rehabilitation and community re-entry. This multidisciplinary, comprehensive system provides rehabilitation services specifically designed to meet the needs of individuals with spinal cord injury (SCI). The project participates in one or more collaborative research modules, and one in-house research project, the latter aimed at improving the health and function of individuals served. The in-house research project is a controlled intervention trial of a novel approach to treating neuropathic pain, one of the most problematic and difficult-to-treat complications of SCI. UAB-SCIMS continues to participate in data collection activities for the National Spinal Cord Injury Statistical Center, and disseminates its results through a variety of accessible formats and venues for both professionals and persons with SCI and their families.

Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 16 $468,364; FY 17 $468,364; FY 18 $468,364; FY 19 $468,364; FY 20 $468,364

Abstract: Spinal Cord Injury Model System (UAB-SCIMS) provides comprehensive, multidisciplinary rehabilitation services to individuals with spinal cord injury (SCI) as a basis for conducting research that contributes to evidence-based rehabilitation interventions and clinical and practice guidelines. Activities of the UAB-SCIMS, both ongoing and during this cycle, reflect an active partnership within the components of UAB’s health system and between UAB and community organizations in Birmingham and across the state. Objectives of the UAB-SCIMS are: (1) Continue to be an effective participant in data collection activities for the National Spinal Cord Injury Statistical Center, enrolling a minimum of thirty newly injured individuals annually with SCI and completing required follow-up examinations; (2) complete a controlled intervention trial of a home-based diet intervention to improve metabolic health, body composition, and quality of life; (3) participate in three collaborative research modules; (4) utilize the active involvement of persons with SCI in the design and execution of the proposed activities; and (5) disseminate project results via a variety of accessible formats and venues for both professionals and persons with SCI and their families, and in conjunction with the Model Systems Knowledge Translation Center (MSKTC). Outcomes of this project include: (1) Availability of a cost-effective diet approach with demonstrated efficacy to improve health and well-being; (2) achievement of recruitment goals for three collaborative modules; (3) dissemination of new knowledge to professionals who work in the field of SCI, persons with SCI, and their families; and (4) Maintenance and improvement of UAB’s SCI comprehensive care continuum. Project outputs include: A cookbook to improve health with demonstrated efficacy, and nutritional guidance disseminated via a variety of venues, a periodic newsletter, ongoing dissemination via a website, development of a variety of Fact Sheets, Question and Answer topics, Rehab Tip Sheets, peer reviewed publications, and national and international presentations.

Project Number: 90SI5010 (Formerly H133N110018)
Start Date: October 01, 2011
Length: 60 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 11 $463,000; FY 12 $463,000; FY 13 $463,000; FY 14 $463,000; FY 15 $463,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: The overarching objective of the Southern California Spinal Cord Injury Model System at Rancho Los Amigos National Rehabilitation Center is to generate new knowledge that directly contributes to improving the health and function, and community participation for persons with spinal cord injury (SCI). This project includes four integrated categories of effort, each led by a management team: (1) comprehensive service delivery, (2) participation in the National Spinal Cord Injury Database, (3) site-specific research, and (4) collaborative research module(s). The site-specific research project uses a longitudinal randomized clinical trial to identify whether a home-based intervention that was demonstrated to be effective at reducing chronic shoulder pain in persons with SCI could be used as a preventative program to decrease the rate of shoulder pain onset. Additionally, the project tests whether a more interactive version of the prevention program would also enhance community participation and self-efficacy for exercise engagement, in addition to further lowering the rate of shoulder pain onset.

NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 16 $463,140; FY 17 $463,140; FY 18 $463,140; FY 19 $463,140; FY 20 $463,140

Abstract: The overarching goal of the Southern California Spinal Cord Injury Model System (SCIMS) at Rancho Los Amigos National Rehabilitation Center (RLANRC) is to generate new knowledge that fosters recovery of function, community re-integration, and wellness throughout the lifetime of individuals with spinal cord injury (SCI). RLANRC is designated as the Patient-Centered Medical Home for SCI in Los Angeles County, providing services to a large underserved and minority population. The objectives of this SCIMS are achieved through four integrated categories of effort during the five years: (1) Comprehensive service delivery; (2) participation in the National SCI Database; (3) site-specific research; and (4) a collaborative research module. SCIMS partners include Emergency Medical Services, Los Angeles County/USC Medical Center, and Harbor/UCLA Medical Center, treating a majority of the region’s trauma victims. The site-specific research evaluates outcomes and sustainability of two programs for promotion of physical activity after SCI. The collaborative research module evaluates a sensor system for establishing effective pressure relief behaviors and reducing risk of pressure ulcer development among wheelchair users. Anticipated outcomes include: (1) Increased knowledge about incidence, causes, and outcomes of traumatic SCI; (2) evidence-based interventions and technologies that facilitate healthy behaviors in individuals with SCI; (3) increase in practical, effective, and scientifically-informed knowledge and strategies for enhancing health, function, and well-being after SCI. Project outputs include peer-reviewed publications, factsheets, presentations, training materials, and guidelines for promoting physical activity and technology for motivating healthy behaviors after SCI.

Abstract: The Rocky Mountain Regional Spinal Injury System (RMRSIS) conducts a program of site-specific research, leads and participates in collaborative module research, maintains the SCI Model Systems National Database, and advances an established SCI Model System of care and research. Project objectives include: (1) conducting a site-specific research project to add to the literature regarding the use of statins in preserving bone health and mitigating neuropathic pain for people with SCI, (2) leading a module research project to evaluate the use of complementary and alternative healthcare to treat pain following SCI, (3) contributing at least 60 new cases each year to the SCI Model Systems National Database and continuing its record of outstanding longitudinal follow-up data collection, and (4) maintaining a successful system of care. Outcomes include: (1) individuals with chronic SCI having low-cost options for managing bone health and reducing neuropathic pain, (2) a greater understanding of the use of complementary and integrative healthcare for people with SCI, and (3) improving an already world-renowned system of care meeting the lifetime needs of people with SCI. This project produces manuscripts in high-impact peer-reviewed journals, presents at national professional scientific meetings, and disseminates research results to consumers and other stakeholders through collaborations with the Model Systems Knowledge Translation Center (MSKTC).

NIDILRR Officer: Amanda Reichard, PhD
NIDILRR Funding: FY 16 $451,349; FY 17 $451,349; FY 18 $451,349; FY 19 $451,349; FY 20 $451,349

Abstract: The South Florida Spinal Cord Injury System (SFSCIS) serves a high volume of patients with spinal cord injury (SCI) providing comprehensive rehabilitation services specifically designed to meet their needs. The clinical components of the SFSCIS include in-patient rehabilitation at Jackson Memorial Rehabilitation Hospital, vocational services, community and job placement, and long-term community follow-up and health maintenance. Project research includes a site-specific study, as well as collaborative projects with other Model System centers. The goal is to improve outcomes in the preservation or restoration of function following SCI. Additionally, this project contributes to the National Spinal Cord Injury Database; utilizes culturally appropriate methods of education, training, and outreach throughout the care system; and includes a comprehensive evaluation program.

NIDILRR Funding: FY 11 $483,500; FY 12 $483,499; FY 13 $483,499; FY 14 $483,500; FY 15 $483,500; FY 16 (No-extension through 12/31/2016)

Abstract: This model system conducts research and training activities that provide a comprehensive, integrated continuum of pre-hospital, medical, surgical, and rehabilitation services to persons with acute and chronic spinal cord injury (SCI). The current project includes four comprehensive elements: (1) continued management of a large model of service delivery for individuals with a diagnosis of traumatic SCI in the Southeastern United States, from point of injury through lifetime follow-up (500 SCI admissions annually); (2) comprehensive and timely collection of data on subjects who meet the inclusion criteria in three categories: Form I (inpatient hospitalization, 125 new subjects annually); Form II (longitudinal collection at 1,5,10, 15, 20, 25, and 30 years post-injury, 600 subjects followed annually); and Registry (demographics only, 200 new subjects annually); (3) two site specific research project titled: “Evaluation of an Improved Method to Assess and Follow the Recovery of Motor Control in SCI” and “A Longitudinal Study of Gainful Employment 10 Years After SCI Onset: Comparisons of Those Who Do and Do Not Return to the Pre-Injury Employer”; and (4) participation in four collaborative “module” research projects: Longitudinal Follow-Up of Individuals Having Diaphragm Pacing Systems Implanted, Extending the SCIREhab Project--Five Year Follow-Up, Evaluating the Sensitivity and Responsiveness of the SCI-QOL CATs, and Neurological Recovery.

Abstract: The Spinal Cord Injury Model System (SCIMS) at Shepherd Center offers multi-disciplinary rehabilitation specifically designed to meet the needs of individuals with SCI across the continuum of care. SCIMS is conducting two site-specific research projects, and one collaborative module. Project 1 evaluates the effects of motor-training plus non-invasive brain stimulation with an anticipated outcome to improve walking ability. Project 2 gathers data about how individuals with SCI utilize hospital emergency departments with an anticipated outcome to improve understanding of the circumstances wherein these services are used. In the collaborative module SCIMS serves as the lead center to evaluate and characterize the experience of spasticity in everyday life with the goal to understand how spasticity impacts function and well-being in individuals with SCI. SCIMS projects and collaborative efforts produce substantive scientific results, and information for dissemination to clinical and consumer audiences.

**NIDILRR Funding:** FY 11 $483,127; FY 12 $482,270; FY 13 $483,438; FY 14 $482,985; FY 15 $482,484; FY 16 (No-cost extension through 9/29/2017)

**Abstract:** The Midwest Regional Spinal Cord Injury Care System (MRSCIS) provides comprehensive, multi-disciplinary medical and rehabilitation care to persons with spinal cord injury (SCI) from the site of injury to community reintegration. The objectives of the MRSCIS are to (1) provide a comprehensive continuum of care for persons with SCI, (2) contribute to assessment of long-term outcomes by enrolling 80 subjects per year into the national SCI database, (3) conduct one site-specific study, (4) disseminate research findings to various stakeholders in an effective and timely manner, (5) collaborate effectively with the Model System Knowledge Translation Center, and (6) involve individuals with disabilities in research and dissemination activities. The site-specific study; Mobility, Activity, and Participation in Spinal Cord Injury (MAPS), evaluates a novel intervention to enhance the participation and community living outcomes of persons with SCI. The amount of daily physical activity is a primary determinant of self-reported and clinical measures of activity and participation, and quality of life. Specific exercise interventions can improve activity limitations and participation restrictions, including increased walking speed, metabolic capacity and efficiency, and self-reported participation.

NIDILRR Funding: FY 12 $463,000; FY 13 $463,000; FY 14 $463,000; FY 15 $463,000; FY 16 (No-cost extension through 4/30/2017)

Abstract: The New England Regional Spinal Cord Injury Center (NERSCIC) conducts research and clinical activities to improve the health and function of people with spinal cord injury (SCI). This Model System is a partnership among Boston University Medical Center in Boston; Gaylord Hospital in Wallingford, CT; and Hospital for Special Care in New Britain, CT. The objectives of this project are to: (1) improve the health and function of people with SCI by expanding the New England SCI Toolkit (previously referred to as the Standards of Care) network, in concert with regional dissemination and technical support, especially to health professionals serving vulnerable groups; (2) employ innovative technology to improve health and function across the lifespan, especially for the most vulnerable, through better access to care and better outcome measures, building upon our successful research to date; (3) translate and disseminate state-of-the-art knowledge, measures, and resources for consumers and professionals on both a regional and national level to improve function and prevent secondary conditions, in collaboration with the Model Systems Knowledge Translation Center (MSKTC); and (4) empower and engage the SCI community across the lifespan in all clinical, educational, and research activities, especially the most vulnerable groups. NERSCIC includes the following projects and activities: My Care/My Call, a peer-led health care empowerment phone training for people with SCI (site-specific project #1); Missing Links: Assessing Function Across the Lifespan in Persons with SCI (site-specific project #2), which utilizes computer adaptive technology (CAT) to develop a mechanism to assess the functional abilities of children with SCI across the lifespan; the New England SCI Toolkit (NESCIT) training and the Toolkit itself, a comprehensive set of clinical standards to improve the management of patients with SCI, based on best practices. Module projects include: A lead project, formerly known as SCI-CAT, the SCI-FI 2 Enhancement and Evaluation with a specific aim of refining and augmenting the existing SCI-FI 1 instrument. The project collaborates on the University of Michigan’s lead project: Evaluating the sensitivity and responsiveness of the SCI-QOL CATs. The aim of this study is to further establish
the psychometric properties of the SCI-QOL CATs by examining their sensitivity and responsiveness to clinically meaningful change across time, and University of Pittsburgh’s lead project: Equity and Quality in Assistive Technology. The objective of this project is to investigate the equity and quality of assistive technology provision and outcomes for individuals with SCI.

Abstract: The University of Michigan Spinal Cord Injury Model System (UM-SCIMS) conducts research, information dissemination, education, and training to improve the lives of people with spinal cord injury (SCI). This system also provides comprehensive rehabilitation and community participation services to those with SCI admitted to the University Hospital, part of the University of Michigan Health System. The UM-SCIMS includes two integrated research studies focusing on factors related to bladder and bowel complications following injury and their impact on quality of life. While the first study provides a conceptual framework for identifying mechanisms by which these factors impact quality of life, the second study focuses on how to prevent such complications by testing an intervention: a self-management program developed exclusively for those with SCI. Dissemination efforts include the development of products related to the two studies in collaboration with the Model Systems Knowledge Translation Center, SCI Lecture Series, consumer briefs, newsletters, website updates, and community outreach activities utilizing a network of state and local community partners.

NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 16 $456,375; FY 17 $456,375; FY 18 $456,375; FY 19 $456,375; FY 20 $456,375

Abstract: The goal of the Mount Sinai Spinal Cord Injury Model System (MSSCIMS) is to provide a comprehensive program of coordinated patient care, education, and research activities for individuals who have sustained spinal cord injury (SCI). Clinical activities are directed at promoting evidence-based practice, understanding the particular needs of the target population, and providing individualized lifetime care to persons with SCI. Research activities include collecting longitudinal data on complications, impairments, activities, participation, and quality of life; participation in three collaborative modules with other Model Systems; and conducting a site specific project in collaboration with the VA Center of Excellence on the Medical Consequences of Spinal Cord Injury in the Bronx by implementation and evaluation of a protocol for improving therapy participation by preventing orthostatic hypotension.

Project Number: 90SI5025
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $453,282; FY 17 $453,282; FY 18 $453,282; FY 19 $453,282; FY 20 $453,282

Abstract: The Northeast Ohio Regional Spinal Cord Injury System (NORSCIS) at the MetroHealth Medical System/Case Western Reserve University (MHS) provides a comprehensive, multidisciplinary approach to the care of individuals with spinal cord injury (SCI). NORSCIS targets newly injured persons with traumatic SCI who come to the MHS for acute rehabilitation for inclusion in the National SCI Database (NSCID). This SCIMS project follows the new traumatic injuries along with the 495 persons already entered into the NSCID. NORSCIS utilizes intramural and collaborative research projects to test innovative approaches to treating SCI and to assess outcomes in health and function. NORSCIS includes two site-specific projects. Early Characterization of Upper Extremity (UE) Paralysis in Cervical SCI as a Means to Determine Patterns of Injury and Recovery, Informing Prognosis, and Guiding Time-Critical Interventions collects preliminary data demonstrating the power of unique UE muscle assessments, providing the groundwork for developing a patient-centered guide to UE treatment for the restoration of function for people with cervical SCI. Methods for Reduction of “Unavoidable” Pressure Ulcers in Persons with Acute SCI focuses on the redesign, fabrication, and testing of a new spine board that will reduce excessive body-board pressures currently found on standard spine boards. In addition, NORSCIS includes a collaborative module project, Early Predictors of Rehabilitation Outcomes After Acute Traumatic SCI, to identify trauma data variables that predict rehabilitation outcomes of persons that survive traumatic SCI. NORSCIS continues to improve care delivery and services through a quality initiative that is based on the preferences of SCI consumers. This initiative matches a peer navigator to a newly injured patient while the patient is in the acute hospital and followed for 1-year post-rehabilitation discharge. NORSCIS collaborates with MHS SCI Consumer Group, the Northeast Ohio Chapter of the United Spinal Injury Association, and NIDILRR’s Model System Knowledge Translation Center to ensure the participation of persons with SCI in conducting SCIMS research and to enable the production of internet and electronic media to serve as a vehicle for dissemination of project outcomes to clinical and consumer audiences.

NIDILRR Officer: Amanda Reichard, PhD
NIDILRR Funding: FY 16 $444,000; FY 17 $444,000; FY 18 $444,000; FY 19 $444,000; FY 20 $444,000

Abstract: The goal of this Regional Spinal Cord Injury Model System is to improve long-term quality of life for persons who have sustained a spinal cord injury (SCI). The objectives of this project are to (1) provide an exemplary and comprehensive system of care for individuals who have sustained an SCI; (2) contribute to the longitudinal study of outcomes following SCI; (3) identify biomarkers that predict patients who are at risk to develop infections; (4) conduct a collaborative project to evaluate an intervention to reduce substance misuse following an SCI; and (5) collaborate with the project’s Community and Scientific Advisory Boards to disseminate findings and develop products that can improve quality of life after an SCI. For objective 3, the project investigates whether sympathico-vagal instability identifies patients at risk for infections earlier than it is possible to obtain with routine blood samples.

Abstract: The goal of the Regional Spinal Cord Injury Center of the Delaware Valley (RSCICDV) is to provide and evaluate a comprehensive program of coordinated patient care, education, and research activities for individuals who have sustained a traumatic spinal cord injury (SCI). Clinical activities are directed at promoting evidence-based practice, understanding the particular needs of the target population, and providing individualized lifetime care to persons with SCI. Research activities are designed to generate longitudinal data on impairment, activities, participation, and quality of life as part of the national database. These activities include site-specific research and contribution to collaborative modules, including research in upper extremity neurological function, pressure ulcer prevention, spasticity after spinal cord injury, and risk determinants for cardiometabolic disease after spinal cord injury. Dissemination activities include development of educational resources and offerings for patients, healthcare providers, and researchers, including online materials and training workshops in the use of outcome measures.

Start Date: October 01, 2011
Length: 60 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 11 $457,000; FY 12 $457,000; FY 13 $457,000; FY 14 $457,000; FY 15 $457,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: The University of Pittsburgh Model Center on Spinal Cord Injury (UPMC-SCI) continues to investigate the relationship between transfer technique and markers of shoulder injury. The center utilizes previous research to develop transfer training material targeted at clinicians and people with spinal cord injury (SCI) and evaluates the impact of the training in a single-blind randomized controlled trial. During the previous funding cycle, the center led a successful module related to assistive technology (AT). This module found that wheelchair failures are increasingly prevalent and are disproportionately impacting individuals from minority backgrounds. Additionally, it was found that wheelchair users lack the wheelchair skills needed for full participation. The center continues the AT module work allowing further investigation of the impact of recent Centers for Medicare and Medicaid Services changes, such as competitive bidding, on AT quality. In addition, specific interventions as part of a new module address both AT quality and wheelchair skills. UPMC-SCI continues its heavy focus on knowledge translation so that this research can lead to changes in clinical care.

NIDILRR Funding: FY 16 $459,759; FY 17 $459,759; FY 18 $459,759; FY 19 $459,759; FY 20 $459,759

Abstract: The University of Pittsburgh Model Center on Spinal Cord Injury (UPMC-SCI) builds upon work from a previous cycle to develop web-based transfer and wheelchair maintenance training materials targeted at wheelchair users and evaluates the impact of each training in single-blind randomized controlled trials. During the previous funding cycle, UPMC-SCI developed successful in-person training programs for wheelchair users, demonstrating transfer training is a potential mediator for preventing secondary upper limb injuries, and that a strong association exists between wheelchair maintenance and decreasing adverse events (such as injuries, missing work, etc.). UPMC-SCI also continues to investigate equity and disparities in assistive technology through its module project. In addition to collecting cross-sectional data, researchers prospectively collect longitudinal data on wheelchair repairs and subsequent adverse consequences. UPMC-SCI continues its heavy focus on knowledge translation so that this research can lead to changes in clinical care. UPMC-SCI participates in collaborative modules investigating trauma databases for early predictors of rehabilitation outcomes after SCI, residential instability in chronic SCI, and characterizing experiences in spasticity after SCI.

NIDILRR Funding: FY 16 $468,364; FY 17 $468,364; FY 18 $468,364; FY 19 $468,364; FY 20 $468,364

Abstract: The Texas Model Spinal Cord Injury System (TMSCIS) center conducts innovative spinal cord injury (SCI) research to improve outcomes and advance rehabilitation methods, procedures, and technologies. TMSCIS provides a comprehensive system of care for persons with SCI extending from emergency medical services to intensive acute medical care; comprehensive inpatient and outpatient rehabilitation; psychosocial services; and long-term follow-up. This center also contributes to the National SCI Database. TMSCIS includes a site-specific project to conduct a clinical trial of a psychological health promotion intervention for women with SCI, delivered in the online virtual world of Second Life. This trial uses a community-based participatory research approach, partnering closely with a National Community Advisory Board of people with SCI. This innovative approach reduces barriers to participation, representing the first group intervention designed to address the psychological needs of women with SCI. This intervention is tested with a national sample of 192 women with SCI randomly assigned to either an intervention or a control group, with assessments at three time points (pre-intervention, post-intervention, and six-month follow-up), to examine the immediate and longer-term efficacy of the intervention and mechanisms through which the intervention influences psychological health outcomes. The center also participates in multiple collaborative module projects on pain, predictors of acute care on outcomes, and exoskeleton use in SCI. TMSCIS develops knowledge translation materials in various accessible media, designed to reach consumers, clinicians, and researchers to inform health-related decision-making of persons with SCI and their medical service providers. TIRR-Memorial Hermann partners with Harris Health Systems, the University of Texas Health Science Center – Houston (UTHealth), Baylor College of Medicine, and the University of Montana.

NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 11 $463,000; FY 12 $463,000; FY 13 $463,000; FY 14 $463,000; FY 15 $463,000; FY 16 (No-cost extension through 3/31/2017)

Abstract: The University of Washington’s Northwest Regional Spinal Cord Injury System (NWRSCIS) provides a comprehensive, integrated continuum of pre-hospital, medical, surgical, and rehabilitation services to persons with acute and chronic spinal cord injury (SCI). Goals for this model system are to (1) contribute an average of 50 new subjects per year to the Spinal Cord Injury Model Systems national database; (2) exceed rigorous benchmark standards for subject recruitment and retention; (3) conduct high quality research that contributes to improved outcomes and better evidence-based rehabilitation for people with SCI and is of sufficient quality that it improves evidence-based rehabilitation and clinical guidelines; and (4) enhance services to various consumers and stakeholders, especially racial/ethnic minority persons, low income, and other traditionally underserved groups. A site-specific study uses an innovative “real world” trial designed to test the effectiveness of a collaborative care approach to improving outpatient treatment for inactivity, chronic pain, and depression. This is a single-blind, randomized controlled trial comparing collaborative care to usual care. The primary outcome measure is overall quality of life. Secondary outcomes are increased physical activity, reduced pain intensity and depression severity, and cost-effectiveness.

Abstract: This project provides rehabilitation services specifically designed to meet the special needs of individuals with traumatic brain injury (TBI) through a multidisciplinary, comprehensive model system which spans the clinical continuum from emergency services through rehabilitation and community re-entry. Research activities include data collection for the Traumatic Brain Injury Model System national database and a site-specific research project aimed at addressing excessive weight gain following TBI, and tailoring an established, evidence-based program that has proved successful with other groups. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 12 $441,000; FY 13 $441,000; FY 14 $441,000; FY 15 $441,000; FY 16 $441,000

Abstract: This project provides comprehensive, multidisciplinary services for individuals with traumatic brain injury (TBI) and conducts research that develops evidence-based rehabilitation interventions and clinical practice guidelines. The Rocky Mountain Regional Brain Injury Model System (RMRBIMS) conducts two site-specific, randomized controlled clinical trials. The first study, entitled “Home-Based Virtual Reality Treatment for Chronic Balance Problems in Adults with TBI” evaluates a low-cost, home-based physical therapy program that incorporates the use of a commercially available virtual reality system aimed at increasing balance and community mobility, enhancing overall balance system function, reducing the risk of falls, maximizing treatment adherence, and improving participation in life activities for individuals with TBI who have exhausted their formal physical rehabilitation opportunities. The second study, entitled “Improving Well-Being After TBI Through Structured Volunteer Activity” evaluates the efficacy of a novel intervention to facilitate successful volunteer placement following TBI, and examines the effect of structured altruistic volunteering upon well-being. In addition to these projects, the RMRBIMS participates in collaborative module research and in the TBI Model Systems National Database, and works with the Model Systems Knowledge Translation Center to disseminate research to the widest audience.

Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 12 $427,188; FY 13 $503,526; FY 14 $426,780; FY 15 $426,484; FY 16 $427,145

Abstract: This project provides rehabilitation services and research aimed at meeting the special needs of individuals with traumatic brain injury (TBI) through a coordinated, multidisciplinary, comprehensive TBI program. The project includes active participation and data collection for the TBI Model Systems national database, participation in collaborative modules, and two site-specific studies: (1) Evaluation and Intervention of Sleep Disordered Breathing (SDB) in Persons with Traumatic Brain Injury, and (2) in Evaluating Assessment Methods for Pain in Persons with Traumatic Brain Injury. Activities of the South Florida Traumatic Brain Injury Model System (SF-TBIMS) reflect an active partnership within the components of the University of Miami and Jackson Memorial Medical Center Health System (UM/JMMC) and Miami HealthSouth Rehabilitation Hospital, and between UM and community organizations such as the Brain Injury Association of Florida, The Florida Department of Health Brain and Spinal Cord Injury Program, and the WellFlorida Council. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.
Brain Research in Aggression and Irritability Network (BRAIN): Building Evidence-Based Approaches to Managing Traumatic Brain Injury

**Start Date:** October 01, 2012
**Length:** 60 months
**NIDILRR Officer:** Leslie J. Caplan, PhD
**NIDILRR Funding:** FY 12 $427,500; FY 13 $427,500; FY 14 $427,500; FY 15 $427,500; FY 16 $427,500

**Abstract:** This project aims to further the evidence for improving clinical management and outcomes for irritability and aggression in individuals with traumatic brain injury (TBI). BRAIN is a comprehensive model service delivery and research system serving individuals with TBI. The System includes prevention and emergency medical services, intensive and acute care, comprehensive medical rehabilitation, long-term follow-up, community reintegration, and vocational rehabilitation. The project includes two site-specific studies: (1) Buspirone for the treatment of chronic post-TBI irritability and aggression: A 91-day single-site, flexible-dose, parallel group, randomized, double-blind, placebo-controlled trial; and (2) Preliminary Development of the Aggression and Irritability Impact Measure: Study 2 works towards the development of a standardized measure to evaluate the impact of irritability and aggression on various aspects of functioning and participation. Measuring impact is a novel, yet complementary approach to existing measures that evaluate the expression of irritability and aggression. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

Abstract: This project provides comprehensive, multidisciplinary services for individuals with traumatic brain injury (TBI), and conducts neuroimaging research that favorably impacts persons with severe TBI, their families, and rehabilitation providers. The project contributes to the TBI Model System national database and monitors long-term functional outcomes. Research includes a site-specific study using novel neuroimaging technologies to reduce diagnostic error and facilitate restoration of communication in persons with post-traumatic disorders of consciousness. The project also contributes to improved long-term TBI outcomes by participating in collaborative, multi-site research. The TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

NIDILRR Funding: FY 12 $430,100; FY 13 $430,100; FY 14 $430,100; FY 15 $430,100; FY 16 $430,100

Abstract: This project provides comprehensive, integrated, team-based rehabilitation to individuals with traumatic brain injury (TBI) and their families to promote full personal and societal participation, and to fill gaps in research knowledge and service delivery. The project includes a trial of CONNECT, a model of care that connects individuals hospitalized with TBI, their families, and their local health care providers remotely to specialized brain rehabilitation resources. CONNECT utilizes traditional (i.e., phone) and customized information and communications technology to increase system capacity and access to services for those in a broader geographic region. The goal of CONNECT is to test the extent to which a complex brain rehabilitation intervention delivered remotely improves participation outcomes and satisfaction compared to a matched group receiving usual care in their communities. In addition, this project contributes to the TBI Model Systems national database, participates in collaborative modules, and disseminates research findings in the region and nationally through seminars, presenting at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

Abstract: This project provides a comprehensive continuum of state-of-the-art rehabilitation care for persons with traumatic brain injury (TBI) and conducts TBI research, including clinical trials and the analysis of standardized data. In this project, the Northern New Jersey Traumatic Brain Injury System (NNJTBIS) conducts a site-specific, double-blinded, randomized controlled trial of a cognitive rehabilitation intervention for processing speed deficits utilizing a proven methodology shown to be effective through multiple studies in the aging population. The project also includes a collaborative modular project to be determined. Finally, the NNJTBIS contributes new data to the National TBI Model Systems Database, and coordinates with the NIDILRR-funded Model Systems Knowledge Translation Center to provide scientific results and information for dissemination to clinical and consumer audiences.

**Abstract:** The objectives of this project focus on improving the quality of life of persons with traumatic brain injury (TBI) through state-of-the-art clinical care, innovative research, and multi-platform, extensive dissemination of research results and other information on TBI to consumers and professionals. This project provides a regional multidisciplinary system of care that includes a number of clinical programs for people with TBI in the New York City metropolitan area, contributes longitudinal data to the TBI National Database, conducts two local research projects to evaluate promising novel approaches to clinical treatment, and participates in “module” and other collaborative research. Two site-specific studies aim to improve quality of life for TBI survivors by developing effective treatments of post-TBI secondary conditions: The first study is a randomized clinical trial that evaluates the impact of light therapy on post-TBI fatigue. The second study examines Internet-based group treatment for post-TBI emotional dysregulation. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

Start Date: October 01, 2012
Length: 60 months

NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 12 $427,452; FY 13 $427,253; FY 14 $427,151; FY 15 $427,171; FY 16 $427,218

Abstract: The goal of this model system is to generate new knowledge and scientific evidence to improve outcomes for all persons with traumatic brain injury (TBI) through the development of innovative interventions, clinical assessment and outcomes tools, and expanded service delivery options. The project conducts research and development activities including contribution to the TBI Model Systems national database, participation in collaborative modules, and two site-specific studies. The first study uses a two-phase approach to examine cultural disparities in rehabilitation healthcare among patients with TBI. The first phase is a descriptive study to collect data on culturally diverse patients with TBI from both Bellevue and Rusk Rehabilitation, who have been admitted into acute inpatient rehabilitation. Data collection examines the patients’ race/ethnicity, acculturation, family support, trust in health care providers, and health and language literacy as related to retention in healthcare after discharge from acute inpatient rehabilitation. The second phase of the study involves the development of the Multimedia Multicultural Educational Program for TBI (MMEPT) to provide patients with culturally-accessible knowledge about their TBI and the rehabilitation process to facilitate improved outcomes, particularly return for follow-up outpatient care. The second study assesses the responsiveness and sensitivity of the Traumatic Brain Injury Quality of Life Measurement System (TBI-QOL) computerized adaptive tests. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

Length: 60 months

NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 12 $447,500; FY 13 $447,500; FY 14 $447,500; FY 15 $447,500; FY 16 $447,500

Abstract: This project provides comprehensive, multidisciplinary services for individuals with traumatic brain injury (TBI), and conducts site-specific research examining chronic health conditions related to TBI designed to contribute new protocols for a “disease management” approach. The first site-specific study is a randomized controlled trial that builds on previous studies to determine how Screening and Brief Intervention (SBI) techniques for alcohol misuse can be adapted for persons with moderate and severe TBI. SBI protocols are elaborated by (1) enhancing positive expectations for health and wellness benefits that accrue from reduced alcohol consumption, (2) including “booster sessions” as has been incorporated into SBI protocols used in Emergency Departments, and (3) providing additional accommodations for cognitive deficits. The second study combines data from two studies, thus allowing examination of the contribution of pre-morbid and co-occurring conditions to later decline up to five years following a moderate or severe TBI. Data from almost 350 participants enrolled in both the TBI Model Systems National Dataset and the TBI Practice-Based Evidence Study are combined to allow in-depth medical information on co-morbid conditions to be examined for their effect on mortality and morbidity over the five years following injury. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center and Brainline.org.

Project Number: 90DP0037 (Formerly H133A120037)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 12 $447,500; FY 13 $447,500; FY 14 $447,500; FY 15 $447,500; FY 16 $447,500

Abstract: This project utilizes a network of local and regional, national, and international collaborations to provide a full continuum of high-quality treatment spanning emergency and acute trauma/neurosurgical care through community re-entry with which to achieve multiple goals in clinical care, research, and dissemination. The project includes two site-specific research projects, both designed to generate new knowledge that leads to improved practices to meet the needs of people with traumatic brain injury (TBI). Project 1 is a randomized controlled trial examining the effects of a novel, theoretically motivated treatment to promote emotional health via increased levels of rewarding activity for persons with post-acute TBI. The treatment combines principles of Behavioral Activation with intervention methods derived from action phase theories of behavior change, and uses SMS (text) messaging to support increased activity in values-driven goal areas. Project 2 develops and performs initial validation studies on an observational pain scale, with the potential to extend effective pain management to the at-risk population of patients with TBI who cannot self-report pain due to impairments in consciousness or communication. Moss Traumatic Brain Injury Model System includes strong components for dissemination and knowledge translation targeted to people with TBI and their families, clinical staff across the continuum of care, and other professional and lay audiences.
Rehabilomics: Revolutionizing 21st Century TBI Care and Research

Length: 60 months

NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 12 $430,100; FY 13 $430,090; FY 14 $430,100; FY 15 $430,100; FY 16 $430,100

Abstract: This project provides comprehensive, multidisciplinary services for individuals with traumatic brain injury (TBI), and applies the principles of Rehabilomics to develop systems-based and best-practice approaches to person-centered care that maximally impact function and recovery. The project includes site-specific research exploring the relationship between dopamine system dysfunction following TBI and genetic variation in dopamine-related genes. In addition to contributing longitudinal data to the TBI Model Systems national database, this project conducts a rehabilitation technology pilot component for developing ecological momentary assessment tools for real-time symptom journaling and data collection tailored to individuals with TBI, infrastructure that critically links biomarkers, and other molecular signatures with assessments grounded in the International Classification of Functioning, Disability, and Health. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

Length: 60 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 12 $447,500; FY 13 $447,500; FY 14 $447,500; FY 15 $447,500; FY 16 $447,500

Abstract: The purpose of this project is to improve the outcomes of patients with traumatic brain injury (TBI) in the North Texas region and beyond by providing multidisciplinary state-of-the-art care to meet the needs of TBI patients and families. Project activities include contributing longitudinal data to the TBI Model Systems national database, both new enrollment and follow-up, two site-specific projects, and participation in collaborative research modules. The two site-specific studies are: Project 1: To study the comparative effectiveness of variations in clinical practices and patient outcomes across TBIMS rehabilitation centers and the development of evidence-based practice guidelines for TBI rehabilitation, and Project 2: To identify TBI patients that may benefit from early methylphenidate therapy utilizing Single Photon Emission Computed Tomography (SPECT) imaging of dopamine transporter. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

**NIDILRR Funding:**

FY 12 $447,500; FY 13 $447,500; FY 14 $447,500; FY 15 $447,500; FY 16 $447,500

**Abstract:**

This project conducts a program of research, dissemination activities, and clinical care designed to decrease emotional distress and to improve participation outcomes for persons with traumatic brain injury (TBI). Research activities include: (1) contributions to the TBI Model Systems National Database, (2) participation in collaborative module projects, and (3) a local project that is a randomized controlled trial of Acceptance and Commitment Therapy as compared to a devised standard of care intervention to decrease emotional distress and improve participation for persons with TBI. This initial trial will lead to larger multicenter comparative effectiveness trials using this intervention. In addition, the TBI Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 12 $436,200; FY 13 $436,200; FY 14 $436,200; FY 15 $436,200; FY 16 $436,200

Abstract: This project utilizes rigorous scientific methods to examine the benefits of two interventions. Projects focus on survivors and couples. One study examines a structured, curriculum-based approach to improve survivors’ resilience and adjustment. The second study examines the benefits of an intervention for couples. Although many professionals agree that strengthening caregivers can enhance rehabilitation outcomes, there is little research regarding the benefits of interventions designed specifically to address the needs of couples after injury. In addition to the site-specific trials, the project collects data for the National Database and participates in a collaborative module project. The Virginia Commonwealth Traumatic Brain Injury Model System disseminates research findings in the region and nationally through seminars, presentations at professional and consumer meetings, publishing in professional and consumer journals, and collaboration with the Model Systems Knowledge Translation Center.

NIDILRR Funding: FY 12 $441,000; FY 13 $441,000; FY 14 $441,000; FY 15 $441,000; FY 16 $441,000

Abstract: This project provides a multidisciplinary system of rehabilitation within a full continuum of medical care by conducting a high quality research site-specific project on post-traumatic headache, participating in a collaborative research projects with other centers, coordinating with the Model Systems Knowledge Translation Center to extend dissemination, addressing the needs of underserved populations with traumatic brain injury (TBI), involving persons with TBI in center operations and research, contributing new data to the TBI Model System database, and participating actively in all Project Directors’ meetings. The site specific project is a trial of sumatriptan, an FDA-approved treatment for migraine, to treat moderate to severe headache after TBI. Activities include training study participants to maintain a reliable headache diary data to monitor compliance with the complex protocol (necessary to adequately treat headaches), as this may present difficulties for those with cognitive challenges and require caregiver assistance; and testing interactive smart phone and web-based diaries that utilize reminders to determine efficacy and acceptance by subjects and caregivers. A collaborative module studies the effect of phototherapy on sleep after acute TBI. This is a randomized controlled trial of two groups with the hypothesis that treatment using bright white light results in improved sleep and secondarily, in improved cognition and behavior.

Project Number: 90IF0104
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 15 $199,909; FY 16 $199,985; FY 17 $199,985

Abstract: This longitudinal study aims to answer the following questions: (1) What demographic characteristics of young children with vision impairment contribute to later reading ability? (2) What is the relationship between executive function and reading ability among young children with vision impairment? (3) Is there a relationship between executive function and visual acuity in young children with vision impairment? (4) Does Rapid Automatic Naming predict reading ability in young children with vision impairment as measured by the Woodcock Johnson III® Tests of Achievement? and (5) Are there areas of school readiness of particular concern for young children with vision impairment? There is already work being done to address the above questions in children without vision impairment, however children with vision impairment are systematically excluded from such studies. In order to address these questions in this population, the project has assembled a team consisting of experts in pediatric vision rehabilitation, eye movements, and eye movement recording, as well as developmental psychology. The project assesses domains known to be associated with reading: The Battelle Developmental Inventory, 2nd Edition (development), the Beery VMI (visuomotor integration), RAN (Rapid Automatized Naming), and an Executive Function Battery (working memory, inhibitory control, and attentional shifting). The primary outcome measure is performance on the Basic Reading cluster of the Woodcock-Johnson III Tests of Achievement. Children are evaluated prior to entry into kindergarten and twice annually until the completion of first grade. The study assesses the relationship between reading and the domains listed above to identify factors that are more potent mediators of individual variance in reading ability. By identifying characteristics of children with vision impairment at risk for reading disability or repeating kindergarten or first grade, the project enables educators to appropriately allocate the limited and highly specialized services of teachers of the students with visual impairments. The knowledge gained facilitates utilization of existing interventions or development of new, individual-centric, targeted interventions.

NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 16 $199,000; FY 17 $200,000; FY 18 $199,999

Abstract: The goal of this project is to focus the field of spinal cord injury (SCI) research on reducing risk for cardiometabolic diseases. The objective is to provide individuals with traumatic SCI with greater access to exercise. A traumatic SCI is a devastating event with lifelong consequences. Life expectancy after SCI has improved to nearly normal lifespan. However, stroke, cardiopulmonary events, and diabetes are main causes of mortality and morbidity after SCI, due in large part, to sedentary behavior. This project has three complementary, multidisciplinary aims: (1) test the efficiency of exercise to improve fitness and reduce disease risk using both new and gold standard biomarkers; (2) innovate a DREAM app that tracks muscle activity and provides feedback to encourage achievement of goals outside of rehabilitation; and (3) assess the impact of exercise intervention on social participation and quality of life. Outcomes for this project include: Relationships between reduced disease risk and improved fitness assessed as a function of exercise; a mobile app using upper limb muscle activity to provide feedback to individuals with disabilities engaged in exercise both in and out of the rehabilitation setting; and documenting how these interventions facilitate attainment of self-determined goals, increased social participation, and quality of life. Achieving these aims will produce new exercise guidelines that improve health, and technology-based solutions to provide greater accessibility outside of the rehabilitation setting.

Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: William V. Schutz, PhD, MSW, MPH
NIDILRR Funding: FY 13 $199,999; FY 14 $199,530; FY 15 $199,948; FY 16 (No-cost extension through 6/30/2017)

Abstract: This project conducts a comprehensive longitudinal study of walking ability and overall health status in young adults with cerebral palsy (CP). This population is particularly at risk since there is now substantial evidence that as people with CP grow into adulthood, they can display a variety of symptoms secondary to their primary condition that are mediated by pain and chronic fatigue, and lead to reduced activity and overall mobility. The project comprehensively evaluates the physical, metabolic, mood, cognition, and quality of life of a cohort of 72 young adults with cerebral palsy from Colorado who had previously been tested at the Center for Gait and Movement Analysis (CGMA) as children, adolescents, or teenagers, including subjects across several levels of walking ability, disease severity, and greatest risk of decline. As all members of the cohort will have had instrumented gait analysis and a physical exam at CGMA in the past, measures of their walking ability, biomechanics, their Gross Motor Function Classification System level, and selected measures of strength, range of motion, and spasticity are compared longitudinally. The remaining measures serve as a cross-sectional sample of young adults with CP, focusing on the measures that commonly describe the secondary conditions most frequently reported, as well as a detailed physical, cognitive, and quality of life assessment. By combining both a longitudinal and cross-sectional study of individuals with CP, the project aims to better understand the functional basis for the decline in health status often reported.

Project Number: 90IF0096
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 15 $199,430; FY 16 $198,372; FY 17 $199,817

Abstract: This project tests the efficacy of an innovative, parent-delivered reaching intervention to improve goal-directed behavior and functional abilities in infants with Down syndrome (DS), targeting and supporting the development of goal-directed behavior in its earliest forms for infants with DS. The study randomly assigns infants and their parents to two developmentally matched groups. Parents are trained to administer either the 4-week intervention or a control condition. Outcome measures include direct observations of object exploration, object grasp planning, object affordances/characteristics detection, and parent reports of functional abilities. Direct observations are measured in weekly intervals while functional abilities are measured at three points: baseline, immediately following intervention, and at the six-month follow-up. Project outcomes directly inform intervention planning recommendations for infants and young children with DS and contribute to the larger effort to improve outcomes in this population.

Principal Investigator: Suzanne L. Groah, PhD 202/877-1196
Public Contact: Inger Ljungberg, MPH 202/877-1964; Fax: 202/726-7521

Project Number: 90IF0121
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 16 $199,989; FY 17 $199,995; FY 18 $199,990

Abstract: Urinary tract infection (UTI) is the most common bacterial infection worldwide. Neurogenic bladder, a central nervous system problem causing a lack of bladder control often due to spinal cord injury (SCI) and multiple sclerosis (MS), puts people at high risk for UTIs. Diagnosis of UTI is largely dependent on symptoms being present, however not all urinary symptoms are due to an infection. It is unknown which symptoms are more likely to lead to infection, versus those that do not. The result is that most urinary symptoms are treated as if they represent an infection – with antibiotics – which may be overtreatment, leading to side effects and antibiotic resistance. This project advances the understanding of and ability to identify and follow urinary symptoms that may or may not be related to UTI. The goal of this project is to create the first Urinary Symptom Questionnaire (USQ-NBV) specifically targeting people with neurogenic bladder due to SCI and MS who void without using a urinary catheter. The objectives are: (1) to develop and validate the USQ-NBV; (2) to pilot test the predictive validity of the USQ-NBV; and (3) to determine which urinary symptoms are related to UTI. The resulting instrument offers a tool for patients, clinicians, and researchers to track urinary symptoms while generating more specific data guiding diagnostic guidelines for the target population. The project team includes MedStar National Rehabilitation Hospital, MedStar Georgetown University Hospital, United Spinal Association, and consumer experts.
**Personalized Medicine for Pressure Ulcer Prevention:**
**Clinical Measures of Buttocks Deformation**

Georgia Tech Research Corporation
Rehabilitation Engineering and
Applied Research Laboratory (REAR Lab)
555 14th Street, NW
Atlanta, GA 30332-0356

**Principal Investigator:** Sharon Sonenblum, PhD
**Public Contact:** 404/385-0633

**Start Date:** September 30, 2016
**Length:** 36 months
**NIDILRR Officer:** Thomas Corfman

**NIDILRR Funding:** FY 16 $199,985; FY 17 $199,897; FY 18 $199,858

**Abstract:** The Rehabilitation Engineering and Applied Research Laboratory (REAR Lab) identifies the clinical characteristics that are related to biomechanical pressure ulcer (PrU) risk. These are the clinical measurements needed to bring wheelchair seating and PrU prevention into the era of personalized medicine. The goal of this study is to reduce the incidence of sitting-acquired PrUs by providing quantitative information about biomechanical risk that supports personalized interventions. Therefore, the objectives of this study are to: (1) identify differences in seated buttocks tissue deformation that are associated with differences in PrU risk, and (2) to identify clinically measurable, biomechanical risk factors that contribute to seated tissue deformation and to an individual’s level of PrU risk. Anticipated outcomes include: (1) Clinicians will benefit from new information relating clinical measurements to their clients’ individual PrU risk. (2) Wheelchair users will benefit from a more personalized PrU risk assessment and more informed and personalized interventions. This should result in fewer PrUs and increased comfort and satisfaction with wheelchair cushions and seating systems. (3) An improved understanding of the mechanisms of PrU development and the buttocks’ response to loading may also lead to improved cushion design and evaluation. The expected products are: (1) 3D MRI scans and deformation descriptions of seated buttocks of 36 individuals with different levels of PrU risk. (2) Measurements of clinical characteristics of individuals with different levels of risk. (3) Statistical analyses relating the clinical measurements to buttocks tissue deformation and PrU risk.

Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 14 $199,956; FY 15 $199,977; FY 16 $199,987

Abstract: The aim of this project is to test the relative sensitivity to change, responsiveness, and predictive validity of DMQ-CAT, a comprehensive dyspnea-outcome computer adaptive test (CAT) that measures new anxiety and activity avoidance in adults with chronic obstructive pulmonary disease (COPD). The 71-item DMQ-CAT captures four distinct dyspnea constructs: intensity, anxiety, activity avoidance, and self-efficacy to evaluate outcomes of COPD pharmacologic, preliminary rehabilitation, and cognitive-behavioral therapy. This project expects to: (1) begin to transform how dyspnea is assessed, (2) improve dyspnea symptom management, (3) impact functional status, (4) improve quality of life, (5) facilitate the earlier treatment and prevention of exacerbations, (6) improve COPD prognosis and survival, and (7) improve COPD healthcare utilization. The DMQ-CAT addresses the limitations of other dyspnea scales by using state-of-the-art item banking method techniques to provide a tailored multidimensional dyspnea assessment using only a minimal number of items.

NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 15 $199,941; FY 16 $199,926; FY 17 $199,863

Abstract: This project aims to develop a smartphone application for self-monitoring of physical activity for persons with Parkinson’s Disease (PD). The project includes testing the efficacy of motivational interviewing (MI), a patient-centered guiding method for enhancing intrinsic motivation to change, and the smartphone self-monitoring application for improving physical activity as the primary outcome, and balance and quality of life as secondary outcomes; and assessing persistent effects of the interventions at nine months (three months post-intervention) in persons with PD. The project begins with focus groups of persons with PD to assist in developing the smartphone application for self-monitoring and the other interventions. A clinical trial includes participants recruited from a PD registry at Northwestern University and randomly assigned to one of four intervention groups: education (control intervention); MI intervention only, smartphone self-monitoring application only; and both MI + smartphone interventions. Participants are assessed for physical activity, balance, and quality of life at baseline, 3, 6, and 9 months to assess for changes in the outcomes.

Project Number: 90IF0100
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 15 $199,998; FY 16 $199,212; FY 17 $199,896

Abstract: This project conducts a randomized controlled trial (RCT) to test the effectiveness of a new intervention called Nutrition and Exercise for Wellness and Recovery (NEW-R) in promoting weight loss, healthy eating, and increased physical activity in individuals with psychiatric disabilities. NEW-R is an 8-week recovery-oriented behavioral intervention that is co-led by mental health peer- and non-peer instructors. It uses innovative strategies such as peer support and modeling, YouTube exercise videos featuring people with psychiatric disabilities, real-world weight management strategies that are inexpensive and easily adopted, and freely available instructor and participant manuals. The study takes place in a community psychiatric rehabilitation and outpatient program of a large urban hospital in Chicago, from which 225 research participants were recruited and randomly assigned to receive NEW-R or services as usual. Research participants are interviewed at study baseline, 2-months (immediate post-intervention), and 8-months post-baseline to assess weight loss, health and mental health outcomes, and changes in health knowledge. The application has two aims: to finalize the intervention and fidelity assessment procedures, and then hire and train NEW-R instructors; and to deliver the intervention and gather data to test its effectiveness on participant health and mental health outcomes. The study protocol includes measures of weight and body mass index, health and function, health self-efficacy, and health knowledge. A study advisory committee meets quarterly throughout the project to ensure the study’s sensitivity to diverse groups of people with psychiatric disabilities, and continued relevance to public disability and state system policy development. An innovative dissemination plan including podcasts, research briefs, and other knowledge exchange formats will promote the translation of research findings into practice.
Examining Determinants of Negative Attribution Bias in People with Traumatic Brain Injury

Trustees of Indiana University
980 Indiana Avenue
Lockfield, Room 2232
Indianapolis, IN 46202-2915
dmneuman@iupui.edu

Principal Investigator: Dawn Neumann, PhD
Public Contact: 317/329-2188

Project Number: 90IF0095
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: William V. Schutz, PhD, MSW, MPH
NIDILRR Funding: FY 15 $199,999; FY 16 $200,000; FY 17 $200,000

Abstract: This project examines factors associated with negative attribution bias in people with traumatic brain injury (TBI), and how this bias differs from healthy controls. Negative attribution bias is the tendency to perceive others’ behaviors as intentional, hostile, and blameworthy, especially when those behaviors are ambiguous or benign. The aims of the study are to: (1) determine group differences for negative attributions (intent, hostility, and blame) and feelings of irritation and anger reported by people with and without TBI for ambiguous behaviors; (2) determine the associations of negative attributions for ambiguous behaviors with cognitive processes and emotional factors; (3) identify regression models that best explain attributions of intent, hostility, and blame in response to ambiguous behaviors; and (4) determine the associations of negative attribution biases with community participation and satisfaction with life. Participants with and without TBI are presented with scenarios that describe characters’ behaviors as benign, ambiguous, or hostile, and result in hypothetically unpleasant outcomes for the participant. Participants rate how irritated and angry they are in response to the situation, and judge the intent, hostility, and blameworthiness of the characters in the scenarios. Trait aggression, anxiety, alexithymia, executive functioning, perspective-taking, and social inference are also evaluated, as well as community participation and satisfaction with life. Study objectives rest on the premise that negative attribution bias will be exacerbated in people with TBI and differ from healthy controls due to frequent cognitive and emotional impairments. The findings from this study are critical to the development of an intervention to reduce negative attribution bias in people with TBI.
Take Charge of Burn Pain: A Randomized Controlled Trial of a Web-Based Self-Management Intervention to Improve Burn Pain Outcomes

Johns Hopkins University  
Fifth Floor Hampton House  
615 North Wolfe Street  
Baltimore, MD 21205

Principal Investigator: Stephen Wegener, PhD  
Public Contact: 410/502-2441

Project Number: 90IF0068 (Formerly H133G140079)  
Start Date: October 01, 2014  
Length: 36 months

NIDILRR Officer: A. Cate Miller, PhD

NIDILRR Funding: FY 14 $198,000; FY 15 $198,000; FY 16 $198,000

Abstract: This project uses a randomized control trial to test the efficacy of Take Charge of Burn Recovery – Pain (TCBR-Pain), a web-based self-management intervention. The project goals are to: (1) determine the efficacy of TCBR-Pain in improving pain management efficacy, and reducing pain and pain-related interference in burn survivors; and (2) determine whether TCBR-Pain improves psychological health and participation in life activities for burn survivors with pain. Participants are randomized into a control group or a standard-care plus TCBR-Pain group and are evaluated at baseline, two months, and five months follow-up. The project advances the knowledge about management of burn-related chronic pain, pain interference, and pain-related distress. The project disseminates information utilizing a cloud-based system that allows for nationwide dissemination, facilitates patient-centered care, and improves access for persons with disabilities.
The Menopause Transition in Women with Traumatic Brain Injury

University of Michigan
Department of Physical Medicine and Rehabilitation
325 East Eisenhower Parkway, Suite 300
Ann Arbor, MI 48108

Project Number: 90IF0047 (Formerly H133G130011)
Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 13 $199,790; FY 14 $198,262; FY 15 $197,657; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project examines the experience of menopause symptoms (vasomotor, somatic, psychological, and cognitive) during menopause in women with traumatic brain injury (TBI), and whether this experience significantly differs from their non-injured peers. The objectives rest on the premise that due to the direct and indirect effects of TBI on health and functioning, the experience of symptoms during menopause transition will be exacerbated among women with TBI compared to their peers without TBI. This project has five phases: Phase I engages post-menopausal women with TBI to participate in focus groups to identify key issues experienced during menopause. This informs the content of a new survey tool and is developed in collaboration with a consultation team of women with TBI, who work with investigators for the duration of the project. In Phase II the survey content and momentary assessment methodology are developed. In Phase III, survey data is collected from 150 mid-life women with TBI and 150 women without TBI. Later in Phase III, the project conducts a momentary assessment data collection in a local sample of 48 women with and without TBI. This methodology allows researchers to examine within- and between-day variability of symptoms and the impact of contextual factors on symptom experience. In Phase IV, researchers conduct quantitative data analysis of the cross-sectional survey and momentary assessment data to characterize the target population. Phase V culminates in the production of a comprehensive protocol and guidance for conducting menopause research in women with TBI with the broader vision of it being adapted to other populations of women with cognitive, physical, and/or sensory disabilities.
Targeting Sedentary Behavior Reduction in Adults with Cerebral Palsy Using a Real-Time Behavioral Intervention

The Regents of University of Michigan
503 Thompson Street
Ann Arbor, MI 48109-1340
mdpeterz@med.umich.edu

Principal Investigator: Mark Peterson, PhD
Public Contact: 734/763-0692

Project Number: 90IF0102
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: William V. Schutz, PhD, MSW, MPH
NIDILRR Funding: FY 15 $200,000; FY 16 $200,000; FY 17 $200,000

Abstract: This project aims to determine the extent of cardiometabolic risk in adults with cerebral palsy (CP), and to reduce sedentary behavior using a novel strategy that will lead to sustainable behavior modification and improved health outcomes. The project comprises three objectives: (1) Compare total sedentary behavior and cardiometabolic risk profiles between adults with CP and matched adult controls; (2) determine the effectiveness of a novel, context-aware wearable monitoring and smartphone-based intervention (iReducSB) to reduce total sedentary behavior, increase fragmentation of sedentary behavior, and lead to sustainable improvement of behavior change in adults with CP; and (3) determine the effects of reducing total sedentary behavior and increasing fragmentation of sedentary behavior on clinically relevant serum markers of cardiometabolic risk.
Prevention of Long-Term Consequences of Mild Traumatic Brain Injury

Wayne State University
Department of Physical Medicine and Rehabilitation
261 Mack Avenue, Suite 546
Detroit, MI 48201
rhanks@med.wayne.edu

Principal Investigator: Robin A. Hanks, PhD

Project Number: 90IF0048 (Formerly H133G130021)
Start Date: October 01, 2013
Length: 36 months

NIDILRR Officer: A. Cate Miller, PhD

NIDILRR Funding: FY 13 $198,520; FY 14 $199,062; FY 15 $193,748; FY 16 (No-cost extension through 9/29/2017)

Abstract: The main objectives of this study are to evaluate the clinical utility of a Brief Concussion Educational Intervention in adults with mild traumatic brain injury (mTBI), and to determine the effectiveness of a brief concussion recovery guide in comparison to a longer, but well-validated guide, with regard to protection against long-term consequences of mTBI. Early education and development of positive expectancies for recovery after mTBI can decrease disability substantially, in some cases by half. Yet, mTBI educational materials are typically cumbersome due to their length and complexity; therefore, emergency department (ED) personnel understandably resist providing educational interventions with patients routinely. For this study, participants with mTBI who presented to the ED, were treated, and discharged to home are randomized to one of three groups: (1) a group that receives an intervention using the Brief Concussion Recovery Guide; (2) a group that receives an intervention using the original, well-validated, but lengthy concussion recovery guide; and (3) a usual care group that receives standard instructions for patients with mTBI provided by the ED upon discharge (e.g., told to follow-up with primary care physician and return to the emergency room if they experience continued headaches, dizziness, vomiting, or blurred vision). Primary outcomes of interest are severity of mTBI symptoms, perceived community integration, and return to work, as well as comprehension and retention of information provided in the concussion recovery guides and satisfaction with the materials.
Treating Cognitive Deficits in Traumatic Spinal Cord Injury (SCI):
A Randomized Clinical Trial

Kessler Foundation
Kessler Foundation Research Center
120 Eagle Rock Avenue, Suite 100
East Hanover, NJ 07936
nchiaravalloti@kesslerfoundation.org
www.kesslerfoundation.org

Principal Investigator: Nancy D. Chiaravalloti, PhD
Public Contact: 973/324-8440; Fax: 973/736-7886

Project Number: 90IF0113
Start Date: September 30, 2016
Length: 36 months

NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 16 $199,994; FY 17 $199,637; FY 18 $199,706

Abstract: The goal of this study is to identify treatments for cognitive deficits experienced by people with spinal cord injuries (SCI). Multiple studies in the SCI population have documented cognitive deficits that adversely impact daily life and benefit from rehabilitation. Published studies note cognitive deficits in persons with SCI in learning and memory (LM) and processing speed (PS), further demonstrated in pilot data collected in previous studies conducted by these researchers. Given that these cognitive deficits have a critical impact on functional outcome after SCI, it is imperative to identify effective treatment for these deficits in an effort to improve everyday functioning and overall quality of life of impacted individuals. The objectives of this study are to: (1) apply a treatment protocol for PS and LM impairments, well-validated in other neurological populations, to individuals with SCI with objectively observable deficits in these areas and document efficacy on standard neuropsychological testing; (2) assess the effectiveness of the interventions in persons with SCI utilizing global measures of everyday life; and (3) evaluate the long-term benefit of treatment. Outcome is measured across two domains. First, researchers administer objective measures of cognitive functioning through a neuropsychological assessment. Second, researchers evaluate treatment efficacy in regard to functioning in everyday life, through an assessment of global functioning. These outcomes are assessed immediately following treatment and six months later. In this way, the project not only identifies the immediate treatment effect, but also the maintenance of treatment effects over time. The expected products are two highly structured, manualized treatment protocols with demonstrated efficacy in treating cognition in persons with SCI.
Improving Quality of Personal Care Assistance Services for People with SCI Through Online Education

Kessler Foundation
Research Center
1199 Pleasant Valley Way
West Orange, NJ 07052-1424
jzanca@kesslerfoundation.org

Principal Investigator: Jeanne M. Zanca, PhD
Public Contact: 973/324-3558

Project Number: 90IF0115
Start Date: September 30, 2016
Length: 0 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 16 $198,884; FY 17 $198,893; FY 18 $197,947

Abstract: The goal of this project is to improve the quality of personal care assistance (PCA) services for people with spinal cord injury (SCI) through online education. This project identifies educational needs and develops an online course to help new PCAs - who are typically unfamiliar with the special needs of people with SCI - understand the unique effects of SCI, the types of care needs that people with SCI have, and how the assistance that PCAs provide helps those with SCI live healthy, productive lives in the community. The course is designed to “jump-start” the training process by providing a foundation of knowledge about SCI that will make subsequent hands-on training in bathing, feeding, transfers, etc. more effective and efficient. The web-based curriculum includes a certification process. Discussion guides, worksheets, and a resource list facilitate the application and adaptation of the training to the care of specific individuals with SCI. The course also addresses how to improve communication between people with spinal cord injury and their PCAs.

TBITutor: An Intelligent Tutoring System to Improve Educational Outcomes in Youth with TBI

University of Oregon
Center on Brain Injury Research and Training (CBIRT)
6222 University of Oregon
Eugene, OR 97403-6222
crode@uoregon.edu

Principal Investigator: Catrin Rode, PhD
Public Contact: 541/346-0593

Project Number: 90IF0073 (Formerly H133G140134)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 14 $199,675; FY 15 $199,869; FY 16 $199,654

Abstract: This project develops TBITutor, a cloud-based intelligent tutoring system designed to help students achieve their academic goals when they return to educational settings after a traumatic brain injury (TBI). As they return to their homes and communities, many of these students face severe challenges, particularly in the academic arena. The most common TBI-related sequelae related to school performance are memory and executive dysfunction, which often result in a progressive lag in academic achievement. The goal of TBITutor is to provide a learning environment that places minimal demands on the executive functioning system and to therefore allow the learner to allocate all memory and attention resources to the learning activities rather than to managing the learning process. TBITutor can be used at home or in school using the students’ own course materials. It guides students through a sequence of evidence-based learning activities while they are doing their homework or studying for tests. TBITutor provides: (1) effective scaffolding for an optimal learning process; (2) tailored support and guidance as needed based on skill level, cognitive profile, and extent of the impairment; and (3) consistent feedback on the content as well as the learning process. TBITutor has the potential to support adult learners with TBI as well as young students.
Project EF: Executive Function in Infants and Toddlers
Born Low Birth Weight and Preterm

Western Oregon University
Teaching Research Institute
345 North Monmouth Avenue
Monmouth, OR 97361
blascop@wou.edu
teachingresearchinstitute.org/projects/pepi

Public Contact: 503/838-8783

Project Number: 90IF0084 (Formerly H133G140244)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 14 $200,000; FY 15 $200,000; FY 16 $200,000

Abstract: This project examines whether traditional assessment methods that have components of executive function (EF) in their structure can discern early indicators of executive functioning in three subgroups of children ages six months to three years: (a) children born low birth weight (LBW) and preterm at low risk, (b) children born LBW and pre-term at high risk, and (c) children born at full-term. The primary goal in Years 1 and 2 is to assess a sample of 100 children born LBW and pre-term, and 50 children who were full-term by administering a battery of standardized measures of infant and toddler development involving both caregiver report and individual assessment. In Year 3, the children are assessed on these measures and a measure of executive function. In the first phase of Project EF, researchers examine differences among the LBW and pre-term groups (at low and high risk) and the full-term sample on domains of early development (Bayley Scales of Infant Toddler Development III and Dimensions of Mastery Questionnaire (DMQ-17). In the second phase of Project EF (Year 3), researchers examine the relationship between children’s performance on these developmental measures and later performance on a measure of EF: Behavior Rating Inventory of Executive Function: Preschool Version (BRIEF-P).
Dynamic Supported Mobility for Infants and Toddlers with Cerebral Palsy

Children’s Hospital of Philadelphia
Research Institute
34th Street and Civic Center Boulevard
Philadelphia, PA 19104
prosserl@email.chop.edu

Principal Investigator: Laura Prosser, PhD, PT
Public Contact: 215/590-2495

Project Number: 90IF0076 (Formerly H133G140166)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: William V. Schutz, PhD, MSW, MPH
NIDILRR Funding: FY 14 $200,000; FY 15 $200,000; FY 16 $200,000

Abstract: The objective of this project is to determine if dynamic supported mobility (DSM) using novel technology leads to greater improvement in motor function than conventional (CONV) physical therapy in infants and toddlers with cerebral palsy (CP). Participants receiving DSM training are given dynamic weight support and therapy focuses on child-directed motor play and exploration in a physically challenging environment designed to encourage motor variability and error experience with minimal assistance or correction from the therapist. CONV therapy involves therapist-directed activities with a focus on the repeated practice of typical movement patterns with assistance and correction from the therapist. The primary outcome measure is gross motor function. Motor outcomes are compared to published percentile scores to determine if the trajectory of predicted motor development has been altered. Secondary outcomes include improvements in physical activity at home, postural control, engagement in daily life, and parent satisfaction and cognition.
Prevalence of Chronic Disease After Spinal Cord Injury:  
A Longitudinal Study

NIDILRR Officer: Pimjai Sudsawad, ScD

NIDILRR Funding: FY 14 $199,707; FY 15 $199,823; FY 16 $199,952

Abstract: The aim of this project is to perform a comprehensive and epidemiologic assessment of the prevalence and risk factors of chronic health conditions (CHC) after spinal cord injury (SCI). This project utilizes a population-based cohort from a state SCI surveillance system registry (SCISSR), lays the foundation for the development of prevention strategies, and provides valuable knowledge needed for the allocation of limited resources. The objectives of this project are: (1) identify the prevalence of CHC’s and the added risk associated with SCI relative to the general population, (2) identify differences in health behaviors compared with the general population, (3) identify risk and protective factors for multiple CHCs, and (4) assess the change in prevalence of a subset of CHC’s over a five-year interval. A community advisory panel convenes to provide stakeholder input from people with SCI. Dissemination activities are geared to both professional and stakeholders through multiple avenues. The ultimate goal of the entire project is to generate new knowledge that may be used in diverse settings and circumstances to promote better outcomes; specifically, the prevention of or early intervention for CHC after SCI.

NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 14 $199,638; FY 15 $199,926; FY 16 $199,596
Abstract: This project conducts a cohort study of more than 3,000 participants to link risk and protective factors to both all-cause and cause-specific mortality after spinal cord injury (SCI). Data collection includes psychological, socio-environmental, behavioral, and health status. Data analysis: (1) evaluates each set of predictors in relation to mortality, using time dependent covariates; (2) assesses change in predictive variables between two follow-ups in relation to mortality; (3) classifies causes of death in comparison to the general population; and (4) identifies predictors of specific causes of death. The project includes input from stakeholder and professional advisory panels on study design, analyses, and dissemination. A primary focus is the development of recommendations for prevention strategies that target high risk factors for both all cause and specific causes of mortality. Prevention strategies are directed at rehabilitation, public health, policy, and stakeholder audiences. Dissemination includes peer-reviewed publications, presentations at national conferences, and publication in stakeholder journals.

Project Number: 90IF0112
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 16 $199,247; FY 17 $199,835; FY 18 $199,841
Abstract: Many individuals now live to aging milestones after the onset of spinal cord injury (SCI). Recent longitudinal research suggests a dramatic increase in physician visits and hospitalizations among those reaching 40+ years post-injury, with some declines in life satisfaction and future expectations. The goal of this project is to better understand these changes to support individuals as they face aging-related challenges. This project conducts a 45-year follow-up, the 9th data collection in the SCI Longitudinal Aging Study. This study was initiated in 1973 using a revolving panel longitudinal design with regular follow-ups every four to five years and intermittent addition of new participant cohorts. As of 2013, a total of 768 participants had participated on 3-8 occasions, 50 of whom had been in the study since inception and 54 added in 1984. During this phase, the project assesses outcomes from a projected 538 participants of the 768 who participated in the 40-year follow-up. Researchers identify the natural course of health, participation, need for medical services, life satisfaction, and self-reported problems using an expanded version of the Life Situation Questionnaire. Specific measures have been added related to aging, with more detail and diversity than included in more basic large-scale data sets. Cross-sectional and longitudinal analyses will be performed. This research identifies factors related to unfavorable changes over time by contrasting participants with stable outcomes against those whose outcomes have declined. Two stakeholder panels meet annually throughout the project, assisting with dissemination and knowledge translation, interpretation of findings, recommendations for policy, and development of guidelines for healthy aging after SCI.

NIDILRR Officer: Kenneth D. Wood, PhD  
NIDILRR Funding: FY 16 $199,664; FY 17 $199,893; FY 18 $199,455

Abstract: Spinal cord injury (SCI) leads to an elevated risk of costly hospitalizations, yet there is limited understanding of the factors leading to hospitalization, the costs, or the consequences for participation and quality of life. Most research is limited to the first year, self-report data, and clinical rather than population-based participants. The purpose of this project is threefold: (1) identify the number of hospitalizations, primary and secondary diagnoses, and costs among a population-based cohort with SCI; (2) identify psychological, socioenvironmental, and behavioral factors associated with each hospitalization parameter; and (3) identify the relationship of hospitalization to participation and quality of life. This project uses administrative cost data to identify hospitalizations, primary and secondary diagnoses, and costs for all years after SCI onset for individuals identified through the South Carolina SCI Surveillance System Registry from 2000-2014 (3,850 individuals). Uniform billing administrative data is linked to self-report data from a subset of 1,069 participants who participated in a longitudinal study of the first five years after SCI onset to identify the predictors of hospitalization. The first set of linked analyses uses the theoretical risk and prevention model. A second set of analyses applies the ICF model from the World Health Organization to investigate relationships with quality of life. A consumer advisory panel meets twice annually throughout the project to help guide the direction of the analyses, interpretation, and recommendations for policy change. They also assist in dissemination and knowledge translation, including the development of self-help parameters to reduce the likelihood of hospitalization.

NIDILRR Officer: Amanda Reichard, PhD
NIDILRR Funding: FY 15 $199,873; FY 16 $199,983; FY 17 $199,954

Abstract: This project examines the usability, feasibility, and effectiveness of a technology-based intervention (WOWii) in promoting exercise and improved fitness for those with spinal cord injury (SCI), using community-based participatory research to refine and enhance an existing evidence-based approach. During the formative evaluation phase, the project uses an iterative process to refine and enhance the WOWii web-based exercise program for people with SCI, resulting in an acceptable and usable intervention approach. Feasibility testing examines participants’ engagement with the web-based intervention during a four-week trial, during which participants provide input on the strengths and weaknesses of the program. In the summative evaluation phase, WOWii aims to increase participant’s exercise behavior, fitness, and perceptions over a 16-week intervention and 2-month follow-up (6 months total).

NIDILRR Funding: FY 14 $199,321; FY 15 $199,632; FY 16 $199,866

Abstract: This project aims to determine the factors associated with hospital readmissions from post-acute care settings and create and test predictive models to identify those persons at high risk for re-hospitalization. To this end, this project (1) examines national data from the Centers for Medicare & Medicaid Services (CMS) to determine rates of hospital readmission for diagnostic groups receiving post-acute rehabilitation in the US including stroke, fracture of lower extremities, and joint replacement of the lower extremity; (2) determines patient socio-demographic characteristics, clinical factors, and functional variables associated with hospital readmission across different post-acute care settings; and (3) uses data and information generated from 1 and 2 to create risk profiles and quantitative models to predict hospital readmission for persons across disability groups and post-acute care settings. This project addresses priorities of the Affordable Care Act, assists in validating readmission as a national quality indicator for post-acute care settings, helps reduce health care costs, and helps in establishing guidelines and parameters for emerging bundled payment programs.

Project Number: 90IF0099
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 15 $199,931; FY 16 $199,923; FY 17 $199,972

Abstract: This project identifies and evaluates relations among pain, depression, and resilience, and the extent to which they predict life satisfaction in men and women with chronic pain secondary to spinal cord injury (SCI). The study uses a cohort longitudinal design with data collected at four time points (baseline, 4 months, 8 months, and 12 months). The aims are to investigate: (1) the extent to which men and women with SCI differ in the relation of chronic pain and depression to physical, psychological, and social functioning at initial assessment and over time; (2) the extent to which men and women with SCI differ on resilience characteristics at initial assessment and over time; and (3) the extent to which men and women with SCI differ on the relation of resilience characteristics to pain and depression and physical, psychological, and social functioning at initial assessment and over time. A new cohort of 200 men and women with chronic pain secondary to SCI are recruited from community-based, public, and private settings. Data is gathered at each time point using four telephone-administrated oral questionnaires coupled with online self-administered questionnaires that incorporate several standardized instruments for measuring pain, resilience, depression, and functioning (physical and social). Findings from this study have implications for clinical practice in primary medicine and rehabilitation and for public health policy that governs the availability and delivery of health services to people with SCI. Dissemination strategies include articles published in peer-reviewed publication and fact sheets providing information on pain, depression, and resilience in people with SCI. This project is a collaboration of TIRR Memorial Hermann, the University of Montana, and Miami University.
Development of a Wearable Robot for Motor Rehabilitation in Acute Stroke

Rehabtek, LLC
10350 Dearlove Road, Suite E
Glenview, IL 60025-3668
rehabtek_bo@yahoo.com

Principal Investigator: Yupeng Ren
Public Contact: 847/853-8380

Project Number: 90BISB0001
Start Date: September 30, 2016
Length: 24 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $262,819; FY 17 $312,181

Abstract: The goal of this Phase II project is to develop a wearable rehabilitation technology to help patients recover from stroke and regain mobility. Project objectives include: (1) developing an ankle wearable rehabilitation robot to guide and interact with acute stroke survivors; and (2) packaging the rehabilitation software which provides (a) closely-guided motor relearning based on real-time audiovisual/haptic feedback, (b) intensive combined stretching and active task-related mobility training with progressive postures in an acute stroke rehabilitation setting, and (c) quantitative assessment of improvements. Outcomes include: (1) Delivering early acute rehabilitation with robot therapy in acute care settings, (2) providing intensive robot-assisted physical therapy for better motor re-learning in the early post-stroke stage and reduce loads to physical therapists in repetitive practice tasks, (3) monitoring impairment and recovery performance, and (4) providing assessment to gain insight into the mechanisms of impairment and neuroplasticity in early post-stroke rehabilitation. The resulting product is a wearable rehabilitation robot with real-time, multi-mode guidance and passive-active movement training to be used in acute stroke rehabilitation allowing for early sensorimotor intervention, and critical acute phase recovery.
Disability Demographics

As stated in NIDILRR’s 2013-2017 Long-Range Plan, valid and reliable demographic data help all agencies and research in the disability field. NIDILRR continues to work with other Federal agencies to meet its statutory mandate to collaborate in producing demographic and statistical data that describe the population of individuals with disabilities. Projects funded in this area generate and disseminate new and current information that can be used by individuals with disabilities, service providers, policy makers, and others working to identify disparities in employment, community living and participation, and health and function.

Length: 60 months
NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 13 $874,998; FY 14 $875,000; FY 15 $874,999; FY 16 $874,998; FY 17 $874,998

Abstract: The objective of the Rehabilitation Research and Training Center on Disability Statistics and Demographics (StatsRRTC) is to narrow and actively bridge the divide between the producers and end users of disability statistics. In pursuit of this objective, the RRTC conducts 12 research and 15 knowledge translation projects that build upon the work of past StatsRRTC projects. Several of the research projects focus on the collection of disability statistics and narrow the divide by (a) developing recommendations and tools that improve the identification of the population with disabilities and measurement of services, and (b) conducting experiments to test alternative survey methods. Project activities include (a) analyzing existing data to assess progress towards national goals and address information needs about critical programs; (b) providing access to timely and relevant disability statistics through national and state-level Annual Reports on Disability that track key indicators and an Annual Disability Statistics Compendium that allows end users to access even more statistics; (c) providing technical assistance to key stakeholders to produce customized statistical analyses and compilations; (d) developing and maintaining a State/Local Statistics which allows users to create customized reports; (e) providing information and referral services, and technical consultation on collection methods and data analysis; and (f) increasing the capacity of end users to effectively utilize disability statistics through the Annual Report and Compendium Rollout event, online training courses for vocational rehabilitation evaluators, and the Center’s State-of-the-Science conference.
Technology for Access and Function

With NIDILRR’s research priorities, technology spans the goals of sustaining health and function, employment, and community living and participation reflecting the critical contributions of technology to successful outcomes for persons with disabilities in all of these areas. At the individual level, the primary focus is on assistive technology devices that enhance the physical, sensory, and cognitive abilities of people with disabilities and assist them in participating and functioning more independently in the home, at work, in recreational settings, and at cultural and community events. At the systems level, the emphasis is on applying technology research and development in ways that enhance community integration, independence, productivity, competitiveness, and equal opportunity by mitigating or eliminating barriers found in large social systems such as public transportation, telecommunications, IT, and the built environment. This research area also includes research to ensure the accessibility and potential of cloud computing to support the independence, employment, and functional capabilities of persons with disabilities.

Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 12 $950,000; FY 13 $950,000; FY 14 $950,000; FY 15 $950,000; FY 16 $950,000

Abstract: This Center conducts an advanced engineering research and development program using new and emerging technologies to address the high rates of physical inactivity in youths and adults with disabilities. The Center includes a coordinated set of research, development, capacity building, and knowledge translation/dissemination projects focused on promoting healthier, more active lifestyles for people with disabilities. The key target areas for the research and development projects are improving access to recreation and exercise venues and equipment, increasing opportunities for people with disabilities to participate in beneficial exercise, using technology to support greater adherence to regular exercise, and promoting regular exercise and active lifestyles for people with disabilities as a way to improve health and function. The research agenda includes projects aimed at (1) determining a valid methodology for using commercially available activity monitors to estimate energy expenditure (i.e., daily physical activity) in manual wheelchair users, (2) the use of off-the-shelf e-health technology for promoting safe and effective dose-response tele-exercise training in the home for adults with mobility disability, and (3) evaluation of a highly scalable information communication technology platform that promotes community-based physical activity for youths with disabilities. Development projects include (1) adaptation of sensors and game controllers to allow youths with disabilities to participate in currently inaccessible active video games, (2) high definition video-based virtual exercise environments integrated into an Advanced Virtual Exercise Environment Device for promoting socially engaging physical activity in people with disabilities, and (3) development of universal design standards for accessible fitness equipment and fitness facilities. Capacity building efforts include a rehabilitation engineering mentorship program, student design coursework in exercise/recreation technology, and infusion of rehabilitation engineering and disability into the graduate curriculum. Knowledge transfer projects include a state-of-the-science conference in exercise/recreation technology, a RecTech wiki, and a series of webinars and online newsletters promoting new knowledge in exercise science, engineering, and recreation.

Rehabilitation Engineering Research Center: Develop and Evaluate Rehabilitation Technology and Methods for Individuals with Low Vision, Blindness, and Multiple Disabilities

The Smith-Kittlewell Eye Research Institute
2318 Fillmore Street
San Francisco, CA 94115
brabyn@ski.org

Principal Investigator: John A. Brabyn, PhD
Public Contact: 415/345-2110

Project Number: 90RE5024
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 16 $925,000; FY 17 $925,000; FY 18 $925,000; FY 19 $925,000; FY 20 $925,000

Abstract: The goal of the Rehabilitation Engineering Research Center (RERC): Develop and Evaluate Rehabilitation Technology and Methods for Individuals with Low Vision, Blindness, and Multiple Disabilities is to impact a number of current barriers to opportunity faced by individuals who are blind, have low vision, and have multiple disabilities. This RERC addresses specifically: (1) emerging and underserved subpopulations, such as children born as premature infants with Cortical Visual Impairment (CVI), returning veterans, and individuals with visual impairments due to brain injury, and individuals with combined vision and hearing disabilities; (2) access to graphical information by people who are blind or who have severe visual disabilities; (3) improvements in indoor and outdoor navigation; and (4) access by this population to science, technology, engineering, and math (STEM) education and careers. The RERC’s activities to address these issues include: (1) research to lay the groundwork for more informed decisions on rehabilitation materials and strategies for children with CVI and veterans with traumatic brain injury, as well as improved communication for individuals with dual sensory loss; (2) the development of new tools for accessing graphics such as a Tactile Graphics Helper and sonification cues for computer screen readers; (3) development of new tools for accessing devices and appliances with digital displays; (4) development of guidelines for teachers in the use of 3-D printing technology for the benefit of STEM students; (5) development of tools and techniques to enhance access to the Maker Movement by consumers who are blind; and (6) the implementation of a sustainable open source, crowd-sourced video description system for web-based video.

Project Number: 90RE5019 (Formerly H133E140054)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 14 $949,999; FY 15 $949,995; FY 16 $949,999; FY 17 $950,000; FY 18 $950,000

Abstract: This project focuses on the research and development of cognitive technologies for individuals with cognitive impairments designed to improve their quality of life, and that of their caregivers. The RERC-ACT focuses on three research and three development projects; educational activities, knowledge translation, and utilization; and continuous quality improvement of the overall center. The Center’s six research and development activities focus on expanding the cognitive technology standards for work, training, dissemination/knowledge utilization, and commercialization by: (R1) performing usability tests with the myriad of technologies used by persons with cognitive disabilities in order to improve individual consumer selection of the ‘right’ technology as well as facilitating improvements in the design and development of existing, emerging, and new technologies for working-age adults with traumatic brain injury; (R2) developing a tablet-based simulator which enables researchers to test, in a very controlled manner, specific user interface features with specific populations; and (R3) conducting an applied clinical trial of the Non-Linear Context-Aware Interactive Prompting Platform (IPP). The clinical trial has three major development components: (D1) providing an easy-to-configure authoring system for non-technical set-up of the IPP in warehouse environments; (D2) combining workplace business systems monitoring (computerized inventory management/business processes) with navigation and contextualized prompts; and (D3) collecting ongoing data and comparing the prescribed task to actual performance, enabling error detection and correction.
RERC on Improving the Accessibility, Usability, and Performance of Technology for Individuals who are Deaf or Hard of Hearing (DHH-RERC)

Public Contact: 202/250-2795 (V/Video); Fax: 202/651-5476

Project Number: 90RE5020 (Formerly H133E140056)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $950,000; FY 15 $950,000; FY 16 $950,000; FY 17 $950,000; FY 18 $950,000

Abstract: This RERC’s mission is to provide consumers who are hard of hearing or Deaf, as well as their families and clinicians, with the knowledge and tools necessary: (1) to take control of their communication and hearing technologies, adapt those technologies to their needs in real-world environments, and achieve greater autonomy in their technology use; and (2) to derive full benefit of the shift from special-purpose devices to increasingly powerful and interconnected consumer electronics. The RERC aims to narrow the gaps between the potential for new technologies to improve the lives of individuals who are hard of hearing or Deaf and their ability to exploit this potential. The center carries out three research and three development and training projects, as follows. R1 investigates how a previously successful face-to-face, clinical program of aural rehabilitation for cochlear implant users can be transferred to a telerehabilitation model, in which services are delivered in the home to previously underserved populations with limited access to clinical facilities using the interactive platform for telehealth and collaborative applications developed by the RERC on Telerehabilitation. R2 investigates how consumers with hearing loss can customize their own cochlear implant mapping using a consumer-driven system to control the programming of the device and personally explore a range of programming parameters to determine if this type of user-driven customization can maximize device benefit. R3: investigates new clinical tools to address a critical gap in fitting hearing devices to very young, prelingual children with hearing loss. D1 develops a framework for a consumer-centric, technology-focused train-the-trainer program, which develops skilled consumer trainers to provide improved quantity and quality of technology training to other consumers. D2 develops field tools, implemented through the integration of hearing devices and smartphones, for monitoring listeners’ perceptions, environmental context information, and hearing device configuration during real-world listening situations, so that factors that interfere with the ability of consumers to use or benefit from hearing devices can be identified. D3 develops interactive learning environments where consumers can explore virtual, yet realistic, listening situations, learn how to optimize the use of their hearing technology, and then transfer the knowledge and skills they have acquired to similar situations encountered in the real-world.
Rehabilitation Engineering Research Center on Technologies to Support Successful Aging with Disability (RERC TechSAge)

Georgia Tech Research Corporation
Center for Assistive Technology and Environmental Access (CATEA)
490 Tenth Street, NW
Atlanta, GA 30318

Project Number: 90RE5016 (Formerly H133E130037)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Sarah Ruiz, PhD
NIDILRR Funding: FY 13 $924,999; FY 14 $924,994; FY 15 $924,992; FY 16 $924,998; FY 17 $924,994

Abstract: The RERC TechSAge conducts programs of advanced rehabilitation engineering and technical research and development (R&D) to increase knowledge about, availability of, and access to effective, universally-designed technologies that enable people to sustain independence, maintain health, safely engage in basic activities of daily living at home and the community, and participate in society as they age with disability. The RERC conducts nine R&D projects. Research projects include: R1. User Needs. This project uses a multi-faceted approach to provide converging evidence to support development of integrated technology that meets the needs of older adults with disabilities. Specifically, it develops a taxonomy of everyday support needs, assesses user needs for home-based activities, and creates an integrated dataset to predict task performance and technology need; R2. Effects of Age-Related Hearing Loss. This project investigates the ancillary impact of age-acquired hearing impairment on the use of mobility-related assistive technology (AT) and outdoor mobility among visually-impaired older adults to identify impacts on AT use, mobility, and community participation, resulting in design and practice guidelines; R3. Telewellness Technologies. This project identifies the requirements of telepresence technology interventions to compensate for activity limitations and participation restrictions among older adults with disabilities through an understanding of telerobot acceptance by the target population, determining the effectiveness of telerobot exercise interventions for enhancing self-efficacy and social connectedness, and assessing the usefulness and ease-of-use of a telerobot. Development projects include: D1. App Development. This project develops mobile applications to support successful aging by older adults with a disability. Three apps are planned: cognitive training to prevent functional decline, route planning to promote community mobility, and gait analysis to predict activity limitations; D2. Smart Bathroom. This project develops a system of smart bathroom technologies and fixtures, such as grab bars and adjustable toilets, that adapt to user’s needs and functional abilities based on an analysis of gait,
balance, posture, grip strength, and other factors; D3. Mobile Manipulator Robot. This project develops an open-source code, open hardware robotic system that performs common actions with its hand (e.g., tool use) and is capable of adapting to changes in a user’s abilities and preferences to provide better assistance. Project activities result in universally-designed interventions that support successful aging with disability.

Project Number: 90RE5025
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 16 $924,994; FY 17 $924,967; FY 18 $924,986; FY 19 $924,949; FY 20 $924,966

Abstract: Project goals include: (1) creating and promoting inclusive wireless technologies that improve the ability of individuals with disabilities to independently perform activities of their choice now, and in a fully-engaged and all-inclusive future; and (2) working with industry, government, and disability stakeholders to raise awareness and champion adoption of accessible solutions for wirelessly connected technologies. Outcomes include: (1) consumers with disabilities directly contributing to the development of wireless devices and services, (2) increasing in social connectedness of individuals with disabilities (including those with intellectual and development disabilities) across varied environments, (3) incorporating universal design elements to guide cultural and social design of current and future wirelessly-connected devices and sensors, and (4) adopting regulatory policies that increase accessible emergency alerts over multiple platforms. Results include consumers with disabilities in product development; the adoption of inclusive wireless products in wearables, apps, auditory devices; publications; knowledge translation; technology transfer; and outreach to stakeholders. The Wireless RERC is a collaboration of the Georgia Institute of Technology in partnership with the Shepherd Center, Georgia State University, the University of Texas, Arlington, and other stakeholders.

NIDILRR Funding: FY 12 $949,613; FY 13 $949,754; FY 14 $949,782; FY 15 $949,717; FY 16 $949,800

Abstract: This center is designed to evaluate the utility of robotic devices for providing rehabilitation therapy after neural injury. Research activities focus substantially on recovery from stroke because individuals with stroke are by far the largest user group requiring intensive rehabilitation and assistance. However, this center also pilots new applications in spinal cord injury, cerebral palsy, traumatic brain injury, and aging. Seven research and development projects center on the use of robots for restoration of function and return to society: D1: Development of expertise in lower-extremity exoskeleton use; D2: A body-machine interface for promoting motor recovery while controlling assistive devices; D3: Wheelchair-based robotic upper extremity exercise and power-assisted propulsion; D4: Wearable aid for fall prevention; R1: Robotic mobility activity center in a fitness facility for people with disabilities; R2: Virtual environment for hand home therapy following stroke; and R3: Community-ready upper extremity interactive rehabilitation. Additionally, three cross-cutting core facilities assist all projects: (1) avatar communications with users; (2) statistical design; and (3) technology transfer. This Center is an international collaboration with the Rehabilitation Institute of Chicago, University of Illinois at Chicago, the University of California at Irvine, Northwestern University, the Illinois Institute of Technology, and Delft University of Technology in the Netherlands.

Abstract: The Rehabilitation Institute of Chicago (RIC) together with its partners, Northwestern University (NU), Emory University, Carnegie Mellon University, University of Colorado at Boulder, and Ekso Bionics design and implement a program of research and development centered on establishing a rational basis for quantifying the appropriate time distribution for use of robotic and computer-based interventions in rehabilitation therapy. The center also investigates how therapists interact with robotic devices when delivering therapy. Seven areas of research and development include: D1-R1 mixed-reality therapy for restoration of arm function in stroke survivors, D2-R2 development of computer-based algorithms for restoration of speech after stroke, D3-R3 effect of stretching of ankle muscles on locomotion in stroke survivors, and D4 how to train people with a spinal cord injury to use a robotic exoskeleton.
Training for the center includes an advanced Education and Training project for undergraduate engineers dedicated to the design of simple devices for rehabilitation as part of NU’s highly successful initiative in engineering design education. Dissemination includes presentations at engineering and rehabilitation conferences, publications in high-impact peer reviewed journals, press releases, websites, and faculty presentations.

Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 13 $924,939; FY 14 $924,997; FY 15 $924,972; FY 16 $924,931; FY 17 $924,953

Abstract: This RERC develops technologies to evaluate and advance mobility and manipulation for people with movement disabilities and includes a total of six projects: three combined development/research projects, two research projects, and one development project. Two projects are focused on upper limb amputees: the Voluntary Opening and Voluntary Closing Terminal Device (VOVC) Project and the Partial-hand Control Project. The VOVC Project is a clinical trial of an innovative new terminal device that enables two types of grasp that traditionally require two separate devices. The Partial-hand Control Project develops a pattern recognition–based control system for motorized fingers and evaluates this technology in a clinical trial. The Ekso Project evaluates use of a powered exoskeleton device to improve gait and mobility therapy in people following severe stroke. The Social Mobility Project develops and evaluates a new research tool that uses a cell phone application (app) to monitor a person’s mobility at home and anywhere in the community. The app identifies the mobility mode (i.e. walking, wheelchair, car, etc.) and assesses social interactions by analyzing where people go. While focusing on people with stroke, one of the largest populations with disability, this app can be applied to virtually any population with mobility-limiting disability. The Manual Standing Wheelchair (MSW) Project develops and evaluates a wheelchair that enables users to be mobile in a sitting or standing position utilizing an ergonomically efficient lever drive. The MSW Project focuses on a large array of wheelchair users, including those with spinal cord injury, spina bifida, and multiple sclerosis. Finally, the Powered Leg Project uses state-of-the-art-technology to create a lightweight powered leg system targeted for older or smaller persons with a lower limb amputation.

Project Number: 90RE5012 (Formerly H133E130014)  
Start Date: October 01, 2013  
Length: 60 months  
NIDILRR Officer: Pimjai Sudsawad, ScD  
NIDILRR Funding: FY 13 $923,442; FY 14 $924,560; FY 15 $924,502; FY 16 $920,402; FY 17 $922,220

Abstract: This project develops and evaluates innovative rehabilitation strategies, techniques, and interventions to enhance health, participation, and employment outcomes among adolescents and young adults with physical, cognitive, and neurodevelopmental disabilities. Center projects include two research studies: R1: An exploratory study to identify the primary cognitive and motivational variables that impact self-management ability, and behaviors among adolescents and young adults with neurodevelopmental disabilities; and R2: A randomized clinical trial of a serious game developed to enhance self-management ability among adolescents and young adults with spinal cord dysfunction. The Center has four development activities: D1: The development of an effective system of data collection, analysis, and display tools to assist healthcare teams who support individuals with disabilities to prioritize, address, measure, and track success in achieving personally optimal levels of health and participation; D2: The development of a dynamic scheduling system based on state-of-the-art artificial intelligence (AI) techniques that augments human cognition to support the management of health and participation of young adults with disabilities; D3: The development of a cloud-based mobile system for dynamic, personalized self-management plans, allowing continuous coordination among the adolescent or young adult with a physical disability, clinical staff, and caregiver networks, and providing each with different capabilities for viewing, updating, acting on, and reporting progress on the shared plans and related medical information; and D4: The development of a visual, interactive, AI-enhanced intervention that uses reinforcement learning to target health management behaviors among transition age adolescents and young adults with neurodevelopmental disabilities. This project is an interdisciplinary collaboration of clinicians and researchers from the School of Medicine, the College of Engineering, the College of Pharmacy, and the School of Information within the University of Michigan.

Newark, NJ 07102-1824
foulds@njit.edu

Principal Investigator: Richard A. Foulds, PhD
Public Contact: 973/596-3335

Project Number: 90RE5021
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 15 $924,577; FY 16 $924,776; FY 17 $924,818; FY 18 $924,858; FY 19 $924,558

Abstract: This project conducts research and development activities focused on wearable robots for independent mobility and manipulation. This RERC is a joint effort of the New Jersey Institute of Technology (NJIT) and the Kessler Research Foundation comprising three research and two comprehensive development projects, plus a portfolio of training activities. Two of the research projects employ three commercially available, lower extremity exoskeletons: One explores the potential of simultaneous spinal cord stimulation to improve exoskeleton use by individuals with spinal cord injury; the second studies the possible improvement in gait after stroke caused by using exoskeletons early in the rehabilitation process. The third project studies the benefit of home-based robotic rehabilitation of the upper extremities in persons who have had a stroke, employing the new upper extremity exoskeleton being developed by the NJIT. One development project explores the application of robotic admittance control as means of allowing users of a lower extremity exoskeleton to have complete control over the movement of their legs. The users make walking-like movements with their hands (or fingers) which are sensed and used to control the movement of the exoskeleton legs. Haptic feedback of the leg movement, conveyed to the hands, provides essential feedback to the user. The project also explores the ability of additional powered degrees of freedom to allow a combination of autonomous and user initiated balance. The second development project extends the NJIT-developed upper extremity orthosis to meet the needs of children with muscular dystrophy and people of all ages with incomplete tetraplegia due to SCI. Admittance control is used as it offers a superior way to counterbalance gravity and the mass of objects to be lifted, thus letting the exoskeleton respond reliably and accurately to limited residual muscle forces. Training activities include a new continuing education (2-3 day) course for clinicians and physicians on wearable robotic applications and a new graduate course for engineering students on the design of wearable robots. Material from the RERC is included in the Kessler Post-Doctoral and Rehabilitation Residency curricula as well as to NJIT’s existing graduate courses on biorobotics, neuromuscular engineering, and neurorehabilitation. Additional training includes a new graduate certificate to be given after the completion of four graduate courses, as well as the infusion of wearable robot experience into masters theses, undergraduate capstone design projects, and mentoring of pre-college students.

Project Number: 90RE5005 (Formerly H133E100002)
Start Date: October 01, 2010
Length: 60 months

NIDILRR Officer: Kenneth D. Wood, PhD

NIDILRR Funding: FY 10 $950,000; FY 11 $950,000; FY 12 $950,000; FY 13 $950,000; FY 14 $950,000; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 12/31/2016)

Abstract: This project advances knowledge translation for universal design using a Knowledge-To-Action Model. It generates strategically important research, development, training, and dissemination deliverables that integrate universal design principles with the generally accepted models, methods, and metrics in the building and product manufacturing industries. Research and dissemination activities address three broad domains of the built environment: (1) housing, (2) public buildings, and (3) community infrastructure. Research projects produce new knowledge about needs and priorities in universal design and critical human factors data essential to resolving design and engineering problems in each of the three domains. One research project establishes a knowledgebase for home modification service delivery and standards; another studies the effectiveness of current universal design standards and conducts targeted human performance studies to improve the evidence base for public building design. A third project evaluates, organizes, and improves knowledge to support and improve current policy initiatives and standards related to universal design of public rights-of-way. One set of development initiatives improves and creates consensus standards and evidence-based guidelines to implement universal design concepts through a certification and accreditation process. Another applies best practices in new product development to produce exemplar products and environments with industry partners. Training activities increase understanding and build capacity for a wide range of stakeholders through online education for professionals, research and development experiences for advanced graduate students, and outreach and assistance to design schools. Dissemination outputs include traditional refereed and trade publica-
tions, an extensive website with downloadable information products, and outreach activities related to newly emerging federal policy. The State of the Science Conference involves stakeholders in identifying knowledge gaps in practice. Collectively, these projects generate strategically important deliverables that address high priority needs that increase the adoption of universal design within the built environment.

Project Number: 90RE5022
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 15 $924,992; FY 16 $924,993; FY 17 $924,996; FY 18 $924,998; FY 19 $924,995

Abstract: The RERC on Universal Design and the Built Environment uses a Knowledge-To-Action Model to advance accessibility and universal design (UD) in the four domains of the built environment: (1) housing, (2) commercial and public buildings, (3) community infrastructure, and (4) transportation. The RERC activities address key needs for knowledge and demonstrate the value of evidence-based practice through improved building regulations and adoption of voluntary UD standards. Strategically important research, development, training, and dissemination activities integrate accessibility and UD principles with the generally accepted models, methods, and metrics in the building and product development industries. Short, intermediate, and long-term outcomes improve physical access, health, and social participation for people with disabilities while also being beneficial for the broader population of users of the built environment. Project R1 conducts evaluations of buildings and facilities in which UD features have been incorporated to assess their effectiveness in practice, strengthen the business case for UD, and provide evidence to support increased adoption of UD. Project R2 conducts human factors research on prevention of slips and falls, use of wayfinding apps, and cost effective methods to evaluate UD products during the design process. Project DV1 develops software tools to improve the implementation of accessibility and UD standards, including an interface for UD certification. Project DV2 engages nine industry partners to create exemplar UD products and environments. Training activities increase knowledge and capacity about accessibility and UD for a wide range of stakeholders, including individuals with disabilities and their advocates. The RERC offers continuing education for design professionals and service providers through conferences, online modules, and collaborations with partners.
already serving these audiences. Interdisciplinary graduate education opportunities build the expertise of the next generation of researchers and practitioners. To reach a broad audience, dissemination activities include a wide array of print and electronic media, all accessible from a web portal. Outreach includes participation in international, national, and local networks and events.

Project Number: 90RE5023
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 15 $924,872; FY 16 $924,764; FY 17 $924,978; FY 18 $924,954; FY 19 $924,899

Abstract: The primary goals of the Information and Communication Technology (ICT) Rehabilitation Engineering Research Center for Community Living, Health, and Function (LiveWell-RERC) are to: (1) promote ICT access to existing and emerging technologies for all people regardless of ability, and (2) develop and validate ICT applications to improve the capacity for independent living and community participation. To accomplish these goals this project includes three research and three development projects. Each project examines important aspects of ICT access. Discovery of User Needs and Preferences for Information and Communication Technologies identifies and confirms users’ needs and access issues related to ICT use, and establishes priorities for potential ICT development independent of technology platforms or form factors. Factors Affecting Acceptance of ICT – People with Disabilities and Caregivers discovers and reports on barriers and opportunities to accessibility and use of wearable, home monitoring and automation technology. Improving Safety and Activity Independence in the Home/Community following TBI is designed to improve safety, increase activity and participation, lessen family burden, and improve life quality through use of self-report measurement paired with technology-based environmental feedback that informs on ability, realistic “next step” goals, treatment, and progress. Development activities include: (1) Technology/Policy Watch and Emerging Issues for ICT Access, to identify mainstream scientific and technology developments that can impact ICT access, policies, guidelines, and standards; (2) Tech Factory – Meeting User Needs by Developing ICT & Software, is comprised of two complementary efforts to respond rapidly to new mainstream ICT development that can be leveraged to meet the needs of people with disabilities; and (3) Use of Behavioral Informatics to Support Safety and Activity Independence in the Home and Community, builds a virtual coach to complement or
replaces the hands-on support and assistance provided by a life coach or family member. Finally, training and dissemination activities promote the adoption of new knowledge into practice. This includes student capacity building, as well as consumer and industry engagement to develop and maintain tools and channels for communicating information on accessible ICT produced by the LiveWell-RERC. The LiveWell-RERC is a partnership between Duke University, the Shepherd Center, and Northeastern University. Additional collaborators include the AGE-WELL National Center of Excellence and University of Toronto in Canada; The Center on Knowledge Translation for Technology Transfer (KT4TT); Side by Side Brain Injury Clubhouse; and commercial partners ilumivu, Samsung, and Verizon.

Project Number: 90RE5011 (Formerly H133E130004)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 13 $923,878; FY 14 $924,054; FY 15 $922,383; FY 16 $923,440; FY 17 $923,446

Abstract: The RERC on Physical Access and Transportation empowers consumers, manufacturers, and service providers in the design and evaluation of accessible transportation equipment, information services, and physical environments. Project activities build upon previous work to focus on enabling technology and universal design to support independent and efficient multi-modal travel in daily life, including its significant role in employment and social participation. Research and development activities provide new tools, research findings, guidelines, and products that advance the field of transportation and “last mile” (e.g., the portion of a trip from public transportation to the rider’s final destination) issues. Research Project 1 focuses on understanding real-time trip information and community dialog as methods for empowering accessible travel. Research Project 2 expands the evidence base for boarding and disembarking policies, practices, and products with an in-depth examination of vehicle ramp and interior design in large transit vehicles. Research Project 3 studies para-transit usage and the usability of the “last mile.” Development Project 1 leverages existing technologies to implement software systems to help riders during multi-modal trips. Development Project 2 partners with bus manufacturers, service providers, and transit agencies to produce standards and regulations, reference designs, and vehicle interior concepts ready for commercialization. This project’s training activities increase understanding and build capacity for accessible transportation and pedestrian rights-of-way for a wide range of stakeholders through an online continuing education program, multi-disciplinary research and development experiences for university students, and advanced graduate students. Dissemination outputs include traditional refereed and trade publications; an extensive website with downloadable information products and design tools; and outreach activities with professional, business, and standards development organizations. Finally, a State-of-the-Science conference brings together all stakeholder groups to envision how future transportation systems can support independent transit use and incorporate universal design as a guiding philosophy.

Principal Investigator: Bambang Parmanto, PhD
Public Contact: 412/383-6649

Project Number: 90RE5018 (Formerly H133E140039)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $949,413; FY 15 $949,361; FY 16 $947,365; FY 17 $949,360; FY 18 $949,301

Abstract: The goal of this RERC is to mitigate accessibility barriers to information and communication technology (ICT) for persons with disabilities (PwDs) with functional and device limitations, provide affordable access to ICT for underserved populations, and develop innovative ICT to improve health and function, social participation, and employment among PwDs. The theme of “From Cloud to Smartphone: Empowering and Accessible ICT” guides the Center’s research and development activities which address cognitive and vocational rehabilitation, communication technology assessment and training, tele-rehabilitation infrastructure, and prevention and management of secondary conditions through six projects: (1) Cloud Accessibility WebAnywhere, (2) Accessible TeleWellness, (3) Accessible Mobile Vocational Coaching, (4) Speech and Language Teletherapy to Rural Underserved Areas, (5) Adaptive Accessible mHealth Transcoding, (5) Longitudinal Accessibility of Web 2.0, and (6) Privacy and Security for PwDs. Center collaborators include the University of Pittsburgh School of Health and Rehabilitation Sciences, the Computer Sciences Human-Computer Interaction Institute at Carnegie-Mellon University, and Physical Medicine and Rehabilitation at the DePaul School of Hearing and Speech.

NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $948,188; FY 15 $949,461; FY 16 $949,224; FY 17 $949,976; FY 18 $949,600

Abstract: This project conducts rigorous evidence-based research for designing effective augmentative and alternative communication (AAC) technologies and interventions, develops and evaluates innovative AAC engineering solutions driven by consumer needs, and provides comprehensive training and dissemination to ensure that all individuals, including those with severe disabilities, have access to effective AAC to enhance the communication of individuals with complex communication needs (CCN). The Center’s research and development activities (R & D) are organized around three themes: (1) improving access to technologies for individuals with CCN who have severe motor impairments by investigating and developing new access techniques (e.g., brain control interfaces and multimodal access); (2) developing language support technologies to enhance communication for those with significant language/cognitive limitations (e.g., technologies that facilitate the transition to literacy, provide contextually relevant smart prediction, and support video visual scene displays to enhance participation in school, work and community routines); and (3) improving the AAC human-computer interface to reduce cognitive processing demands and enhance communication. Additionally, the Center brings together a team of rehabilitation engineers and scientists to deliver targeted training and dissemination to build greater capacity and maximize the effective translation of R & D for real-world use.

Public Contact: Kate Vanderheiden 301/405-2043

Project Number: 90RE5015 (Formerly H133E130028)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 13 $925,000; FY 14 $925,000; FY 15 $925,000; FY 16 $925,000; FY 17 $925,000

Abstract: This RERC is focused on accessibility of information and communication technologies, for persons across disability types and socio-economic levels. Accessibility issues addressed by this RERC stem from the interaction of four trends in information technology: (1) technology is increasingly required for all aspects of life (education, employment, health, safety, transportation, community participation, home management); (2) accessibility solutions do not exist for many groups – especially people with non-“mainstream” disabilities; (3) solutions that exist are often unaffordable; and (4) the number of different technology platforms, operating systems, and technology types that an individual must be able to use is increasing faster than assistive technology (AT) vendors can address. The RERC builds on and coordinates with the ongoing work of an international consortium (“Raising the Floor”) engaged in development of an underlying inclusive infrastructure that can greatly simplify accessibility and reduce costs for users and developers. This “Global Public Inclusive Infrastructure” (GPII) is designed to make assistive technologies and other access solutions available for many more users, much more efficiently and cost-effectively. (Both the consortium and the GPII concept were originated in the predecessor RERC.) The RERC’s research and development activities include: (1) Continuing development of the GPII concept – evolving it to address the changing technology landscape and the growing understanding of its role based on discussions with accessibility and mainstream stakeholders; (2) Moving the GPII from concept, papers, and laboratory prototypes, through to field implementations to test the efficacy and viability of the concept with real-world conditions, users, and limitations/realities; specifically: (a) Development and testing of a package for deploying and applying the GPII in public libraries of all sizes, with a focus on providing libraries with cost-effective ways of serving users with a wider range of abilities – including those with cognitive, memory, and digital-literacy related barriers such as elders and first-time users; (b) Development and testing of a decision support tool based on the GPII Unified Listing, that provides users and clinicians with a new capability for tracking and selecting ever-changing
solutions for users – including not only comprehensive information on assistive technologies, but also not-previously-available information on the access features that are built into mainstream technologies;
(3) Facilitating and promoting access built directly into mainstream ICT products through technology transfer programs and research support for industry standards groups and governmental agencies working on accessibility standards.

Length: 60 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 10 $872,886; FY 11 $950,000; FY 12 $950,000; FY 13 $950,000; FY 14 $890,264; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 9/29/2017)
Abstract: This project conducts research and development projects aimed at addressing the needs of children with orthopedic disabilities. The overall goal of the project is to transfer and commercialize the research to offer new tools, better technologies, and improved treatment strategies for children with cerebral palsy, clubfoot, spina bifida, spinal cord injury, osteogenesis imperfecta (OI), and other conditions that cause mobility and manipulation problems. The project designs and develops devices and improved protocols that will help alert doctors, therapists, caregivers, and family members of joint overload concerns. Those devices include the development of an elliptical machine to improve neuromuscular control and stability in children. Other development projects are a novel pediatric robotic gait trainer, a biplanar (3-D) fluoroscopic imaging system that allows researchers to see the internal motion of the bones inside the foot, and a customized orthotic (brace) based on sensor technologies to treat pediatric flat foot. The research projects include: gait analysis of children with OI and severe clubfoot deformity to determine strain on the femur and humerus in those using crutches in order to modify activities or design better devices to absorb forces (and thus prevent fractures) and to better direct surgeons so they are aware of high load areas; using MRI and fMRI imaging for children with cerebral palsy to assess if there are changes in brain activity as a result of surgery or robotic-assisted rehabilitation of the arms and legs; evaluation of home-based robot-guided therapy, combined with interactive game elements to keep children interested, and tele-assessment to determine effectiveness in maintaining mobility in children with cerebral palsy; and mobility modeling of the upper and lower extremities (arms and legs) to determine the relationship between internal joint forces, assistive devices, ankle arthroereisis (implants), and longer-term tissue level effects as they relate to pain and function.

NIDILRR Funding: FY 13 $748,126; FY 14 $748,192; FY 15 $748,208; FY 16 $748,455; FY 17 $748,957

Abstract: This project researches and develops methods to enable software providers to easily and rapidly implement inclusive user experiences so that consumers are empowered to fully participate in cloud and web systems. The project is guided by four main principles: (1) rapid utilization, (2) cloud services, (3) universal design, and (4) a focus on users with low vision and cognitive disabilities. Research and development activities are built upon cutting-edge efforts in computer science, human-computer interaction, and machine learning. The research projects are focused on forming a better understanding of how end users want and should interact with and utilize enabling software components. Key areas of research include crowd-sourced assistance, adaptive user interfaces, and authentication. The development projects are focused on implementing prototypes and moving them rapidly towards deployment and eventual commercialization. They are designed to draw from the research projects and ensure rapid transition of new knowledge through a variety of utilization pathways.

$474,685

Abstract: This project aims to improve health and functional outcomes of wheelchair users by increasing their knowledge of appropriate wheelchair use and their role in the wheelchair service delivery process, and providing supportive technologies to assist them in leading a healthy lifestyle through the development and testing of a two virtual coaches. The Wheelchair/Seating Usage Coach is a suite of interactive mobile apps and portable sensing devices that teach safe and effective use of a wheelchair (e.g., wheelchair fit, propulsion techniques, wheelchair maintenance, and use of seat functions), and assists wheelchair users in navigating the service delivery process. The Lifestyle Coach is a suite of interactive mobile apps and portable sensing devices that assist wheelchair users to self-monitor and manage their weight and physical activity. The United Spinal Association and peer support groups in the Pittsburgh area and other regions assist in the development and testing of these virtual coaches. The project expects to commercialize the portable sensing devices and disseminate the mobile apps through app stores, partner organizations, professionals pursuing continuing education credits, professional conferences, and social media. The coaching tools can be incorporated into a community-based program that teaches self-management skills applied to wheelchair use and healthy lifestyle for wheelchair users.
Prosody and Voice Characteristics of Children with Cochlear Implants

Principal Investigator: James Mahshie, PhD
Public Contact: 202/994-2052

Project Number: 90IF0042 (Formerly H133G120272)
Start Date: October 01, 2012
Length: 36 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 12 $199,967; FY 13 $199,498; FY 14 $198,256; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 5/31/2017)
Abstract: This project examines the prosodic and voice characteristics of 40 children with cochlear implants (CIs) in two groups – a 4-5 year old group and a 7-8 year old group. For comparison, matched groups of hearing children are also studied. In addition to examining how prosodic and voice characteristics differ between younger and older children with CIs, this work permits identification of those characteristics that differ from those of hearing children and that persist despite experience with the implant. This project also examines the relative contribution of prosodic and voice attributes to overall speech intelligibility in CI children, analyzing the co-occurrence of prosodic and voice issues with measures of other features such as vocabulary and articulation that can influence spoken language communication. Finally, the project explores selected acoustic factors in the CI children’s productions to explain the acoustic and production bases for their prosody and voice difficulties.

Project Number: 90IF0038 (Formerly H133G120204)
Start Date: October 01, 2012
Length: 36 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 12 $599,189; FY 13 $1 (Funds for FY 2013 were funded using FY 2012 program money); FY 14 $1 (Funds for FY 2014 were funded using FY 2012 program money); FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 9/29/2017)

Abstract: This project develops an online Virtual Home Modifications Education Assistant (VHMEA) for educators and students in building construction, design, occupational therapy, and rehabilitation disciplines; professionals in housing fields; users of the built environment; and consumers with disabilities. When complete, the VHMEA features an online, virtual home that demonstrates the need for home modifications for people with disabilities, allowing users to encounter problems, solve them, and examine the results of modifications and universal design (UD) efforts. The VHMEA trains users on how modifications and UD can reduce issues of disability and aging by ameliorating environmental barriers. Project aims are to: (1) demonstrate the impact of barriers and facilitators in the built environment; (2) develop a dynamic teaching tool that will allow educators and students to participate across distances, eliminating educational barriers; (3) allow students to learn home modifications and the use of assistive technologies by doing; (4) create a user experience that will increase the use of UD principles in teaching and practice; and (5) help consumers make choices on accommodations and improve self-advocacy. The VHMEA allows users to explore the 3-D virtual home through the use of customizable character avatars. The home simulates barriers and the uses of UD, targeted accommodations, and assistive technologies. It provides interactivity with simulated features of the home. Multiple users can interact with each other and the environment, and explore with avatars that simulate multiple disabilities and the effects of aging in the home. Accommodation solutions are keyed to the Assistivetech.net database of products for individuals with disabilities (www.assistivetech.net), allowing users to reference real-world solutions to problems. Large classes as well as small group or individuals may use VHMEA for instruction as distance education, an in-class demonstration tool, or solo exploration by consumers.
ALIGN v.2.0: Identification and Quantification of Real-Time Barriers to Community Mobility

Georgia Tech Research Corporation
505 Tenth Street, NW
Atlanta, GA 30318-5775
jon.sanford@coa.gatech.edu

Principal Investigator: Jon Sanford
Public Contact: 404/894-1413

Project Number: 90IF0123
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $199,940; FY 17 $199,963; FY 18 $199,962
Abstract: This project builds upon the Application for Locational Intelligence and Geospatial Navigation (ALIGN) prototype developed and pilot tested as part of the RERC on Technologies for Successful Aging with Disability. This project: (1) identifies and validates key real-time factors (i.e., pedestrian volumes and timing of traffic of signals); (2) refines the database structure and data acquisition processes; (3) applies a weighting system to real-world factors to generate route mobility scores; (4) develops an enhanced routing algorithm; (5) develops the backend capability to collect actual use data to inform continual refinement; (6) refines and tests usability of the interface; (7) demonstrates feasibility through real-world utility testing; and (8) develops a management, marketing, and distribution strategy. Project outcomes include a proof-of-concept prototype ALIGN v.2.0 with routing algorithms that enable the application to be customized with location-specific data enhancing the mobility of people with mobility disabilities for any geographic area.
Field Initiated Projects (FIPs)

Investigating Performance Indicators in Accessible and Inclusive Public Transportation

The Regents of the University of Michigan
503 Thompson Street
Ann Arbor, MI 48109-1340
crdsouza@umich.edu

Principal Investigator: Clive R. D’Souza, PhD
Public Contact: 734/763-0542

Project Number: 90IF0094
Start Date: September 30, 2015
Length: 36 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 15 $199,954; FY 16 $199,544; FY 17 $198,227

Abstract: This project aims to determine factors in public transit vehicle design and operations that impact user performance (accessibility, safety, and usability) and users’ perceptions and mode preference (fixed-route bus, complementary paratransit, demand response), and in turn affect transit system performance. Two research studies are conducted to accomplish the project objectives. The first study involves a quantitative analysis of data obtained from a local transit agency combining operations (fixed-route, paratransit, and demand-response) and passenger information over a two year period within a defined geographical area to determine dependencies between transit system performance and the performance (accessibility, safety, and usability) of users with mobility disabilities. The analysis uses datasets routinely gathered by transit agencies, including automated vehicle location, in-vehicle video surveillance records, archived demographic and trip information of paratransit service riders, and passenger surveys. The second study engages individuals with diverse mobility disabilities (including users of wheeled mobility devices, ambulation aids, and individuals that are blind or visually impaired) in a field study yielding kinematic, physiological, and self-reported contextual data to model relationships between physical, psychosocial, and environmental factors at the individual level. Individuals with disabilities, community partners, and transportation service providers play a key role in the project as consultants, Advisory Board members, and study participants - contributing their expertise and first-person perspectives to this project. Dissemination activities focus on translating project findings into outputs and formats that are tailored to key stakeholder groups; including traditional refereed and trade publications for researchers; downloadable information products on a community partner’s website tailored to transportation service providers, individuals with disabilities, and their advocates; and collaborative outreach activities with community partners.

**Public Contact:** 313/577-7879; Fax: 313/577-7636

**Project Number:** 90IF0092  
**Start Date:** September 30, 2015  
**Length:** 36 months  
**NIDILRR Officer:** A. Cate Miller, PhD  
**NIDILRR Funding:** FY 15 $195,489; FY 16 $192,631; FY 17 $193,956

**Abstract:** This project aims to enhance diagnostic accuracy in identification of traumatic brain injury (TBI), using a novel application of eye-tracking technology during standard cognitive testing, based on the hypothesis that persons with verified TBI and persons who feign TBI each show distinct oculomotor patterns during cognitive evaluation. The primary target population is adults referred for assessment of TBI-related cognitive impairment. The study employs a known-groups design that comprises four groups: adults with moderate to severe TBI, adults with mild TBI, healthy adults instructed to put forth full effort, and healthy adults coached to simulate TBI. These groups are tested using adapted standard cognitive tests, including tests of malingering, to include eye tracking. Principal dependent variables relate to classification accuracies. Principal predictors are traditional scores from the tests plus indices of oculomotor response (e.g., distribution of attention in areas of interest, fixation patterns and time, pupil dilation, and blinks) combined with performance indices (e.g., correct/incorrect responses). The project is innovative in that no prior research has systematically investigated visual gaze combined with elements of decisional process applied clinically to distinguish cognitive impairment and dissimulation.
Effect of Guidance Surfaces on Travelers with Vision and Mobility Impairments

Western Michigan University
1903 West Michigan Avenue
Kalamazoo, MI 49008-5200
robert.wall@wmich.edu

Principal Investigator: Robert Wall Emmerson, PhD
Public Contact: 239-387-3072

Project Number: 90IF0127
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 16 $587,055; FY 17 (This project was fully funded in the first year); FY 18 (This project was fully funded in the first year)

Abstract: This project focuses on international standards for materials and installation of tactile guidance surfaces for crosswalks with the goal of improved safety and guidance for pedestrians with visual disabilities. The project includes a review of international standards and use of surfaces for guiding people who are blind to crosswalks and helping them align, and collects data on the most promising materials and installation methods. With increasingly complicated modern intersections, people who are blind have more trouble finding crosswalks, aligning to cross, and crossing a street in a straight line. In the US, there is no standard for material or installation for tactile guidance surfaces to help people who are blind to locate a crosswalk or align correctly. International standards and pilot data suggest some surface treatments that might improve safety without creating barriers for people with mobility impairments. This project collects data with people with mobility and visual impairments to determine what materials and installation pose the least problem for them. The project then assesses the best materials and installation from this phase with people who are blind to see which offers the best information for finding crosswalks and aligning to cross a street. The project team combines expertise from a research university, experienced professionals in the field of blindness and mobility, and a nationally recognized civil engineering firm. In addition to data from people with mobility and visual impairments, project outputs include a guidance document that can be used by cities and municipalities to standardize their approach to using tactile guidance surfaces for people who are blind.
WorkingWell: Developing a Mobile Employment Support Tool for Individuals with Psychiatric Disabilities

Project Number: 90IF0069 (Formerly H133G140089)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 14 $199,619; FY 15 $199,149; FY 16 $199,779

Abstract: This project develops and tests WorkingWell, an innovative, easy-to-access, self-directed, and individualized mobile employment support tool (smartphone “app”) for individuals with psychiatric disabilities, available when and where the user needs it. WorkingWell targets autonomy-supportive constructs derived from Self-Determination Theory, and builds on previous research and the Individual Placement and Support (IPS) model of supported employment to help people succeed at work. This project aims to: (1) develop the information architecture, functionality, technical specifications, and general design for the WorkingWell prototype via iterative, user-centered design including focus groups of users and employment specialists, and expert review; (2) develop the fully functional WorkingWell prototype using state-of-the-art processes informed by iterative, formative testing of the usability, accessibility, and acceptability of prototype components; and (3) test the acceptance and feasibility of WorkingWell through a one-week feasibility trial and a three-month pre- and post-test demonstration field test with individuals receiving IPS supported employment, usage metrics, and post-implementation feedback interviews with a sample of users and employment specialists. The goal is to create a validated application that can be easily installed onto a mobile phone to facilitate wide-scale and far-reaching dissemination of IPS and follow-up support for people with severe psychiatric disabilities.
The Development of a Virtual Reality Program to Improve Executive Functioning in Individuals with TBI

Kessler Foundation
300 Executive Drive, Suite 70
West Orange, NJ 07052
dkrch@kesslerfoundation.org

Principal Investigator: Denise Krch, PhD
Public Contact: 973/324-8392; Fax: 973/243-6984

Project Number: 90IF0054 (Formerly H133G130189)
Start Date: October 01, 2013
Length: 36 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 13 $199,624; FY 14 $199,578; FY 15 $199,716; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project develops an innovative treatment that is strongly motivating, yet relevant to real-life function for people with traumatic brain injury (TBI): the Virtual Reality Executive Function Training (VREFT). Many studies have shown that executive function (EF) impairments are a key problem following TBI, and deficits in EF have been shown to impact multiple areas of the lives of people with disabilities, including societal and family functioning and employment. EFs are complex and dynamic in nature, making it a very difficult area of function to address using traditional rehabilitation tools. In order to rehabilitate EF skills, interventions must allow patients the opportunity to practice implementing sequences of actions and the complex behavioral patterns required of everyday interactions. Whereas traditional clinical treatment environments often lack the sequence of actions and reactions that occur in real life, the technology of virtual reality (VR) allows for the creation of an intervention environment with realistic spatial and temporal scenarios that closely mimics real-life, thus increasing the intervention’s ecological validity. The project development objectives are to: (1) Design and develop a functional, interactive virtual environment that simulates the complexity of occupational scenarios; (2) develop and implement a set of cognitive tasks in the virtual environment that specifically train problem solving, set shifting, and divided attention; and (3) implement adaptive task difficulty to optimize training progress. The completed VREFT prototype is tested in a pilot evaluation trial with individuals with TBI and moderate-to-severe EF impairments.

kesslerfoundation.org/researchcenter/hpel/index.php

Principal Investigator: Peter Barrance, PhD
Public Contact: 973/324-3550

Project Number: 90IF0077 (Formerly H133G140183)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 14 $199,878; FY 15 $199,983; FY 16 $199,994

Abstract: This project refines the process for prescribing in-shoe footwear modifications, leveraging in particular the weight-bearing MRI technology developed under a previous NIDILRR field initiated project Improved Weight Bearing Evaluation of Knee Osteoarthritis. This project consists of two phases: (1) investigation of the immediate effect of incremental lateral in-shoe wedging on both static and dynamic descriptors of lower extremity biomechanics, as assessed using weight bearing MRI and gait analysis; and (2) a short term interventional trial in which the clinical effect of patient-specific in-shoe wedging is compared against the performance of a neutral (un-wedged) orthotic. Functional mobility tests and questionnaire reporting are utilized to evaluate the clinical effect on osteoarthritis-related pain and disability.
Audio-Tactile Web Accessibility with Haptic Gloves

Principal Investigator: Yevgen Borodin, PhD
Public Contact: 516/313-7356

Project Number: 90IF0117
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $200,000; FY 17 $200,000; FY 18 $200,000

Abstract: This project conducts research aimed at improving the utility of web access for people who are blind or have low-vision. The goal of this project is to better understand how the effectiveness of non-visual web browsing may be improved with tactile interfaces in general and haptic gloves in particular. Project objectives include: (1) designing audio-tactile interfaces for general browsing, text entry and editing, and dynamic interaction with web interfaces; and (2) developing a haptic glove with finger tracking and tactile feedback, and input functionalities enabling research activities. Outcomes include: (1) to design and implement software for novel haptic interfaces for web browsing, (2) to understand tactile behaviors and strategies employed by people who are blind and those with low-vision, (3) to provide insight into how dynamic haptic feedback can be used to improve computer interaction, (4) to provide diverse educational outcomes for university students and people affected by vision loss, (5) to create FeelX – a working audio-tactile system capable of providing haptic feedback, and (6) to enhance the web browsing productivity of people who are blind or have low-vision leading to improved access to education and employability. This project is a partnership between the Web Accessibility Lab at Stony Brook University and Lighthouse-Guild.

MyLife: Development of a Cloud-Based Transition ePortfolio for Individuals with Cognitive Disabilities

Assistech Systems LLC
99 West Tenth Avenue, Suite 325
Eugene, OR 97401
tkeating@cognitopia.com
www.cognitopia.com

Principal Investigator: Thomas Keating, PhD 541/912-4329
Public Contact: 866/573-3658

Project Number: 90IF0080 (Formerly H133G140192)
Start Date: October 01, 2014
Length: 36 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 14 $199,989; FY 15 $199,857; FY 16 $199,855
Abstract: The goal of the MyLife e-Portfolio is to provide a cognitively accessible life-experience communication tool that grows and changes throughout transition and later life, providing an easily accessible life and work history in appropriate formats to students with disabilities, families, educators, and other transition-team members. Students with cognitive disabilities face significant challenges to involvement in transition planning and realizing meaningful outcomes in employment, post-secondary educational opportunities, and independent living. MyLife is a cloud-based application, enabling shared creation and management of an electronic transition portfolio for secondary transition students with cognitive disabilities such as autism and intellectual disability. MyLife is evaluated through a usability field study to aid iterative development followed by a repeated-measures study to assess impact of the full application on self-determination and transition outcomes. The project collaborates on testing and evaluation with a school-based transition program serving 18-21 year olds pursuing a modified diploma.
Energy Management System for Battery Powered Mobility Devices Based on Wireless Power Transfer Concept to Promote Community Living and Participation

Utah State University
1415 Old Main Hill
Logan, UT 84321

Principal Investigator: Zeljko Pantic, PhD
Public Contact: 919/593-4052

Project Number: 90IF0116
Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 16 $199,903; FY 17 $199,232; FY 18 $199,942

Abstract: The goal of this project is to create a state-of-the-art, hands-free solution that targets persons with severe disabilities struggling for independence and frustrated by the limited functionality of their powered mobility device. The solutions is the creation of novel hardware and software components that lead to a comprehensive management solution for recharging the batteries of powered mobility devices based on the emerging wireless power transfer (WPT) charging technology. This project is divided into three sections, each with its own objective. Section I’s objective is to understand the needs of users by utilizing human-in-the-loop design principles to conduct usability tests and final testbed integration and validation. The objective of Section II is to develop new WPT charging infrastructure. Finally, the objective of Section III is a software and hardware platform for adaptive, reconfigurable EMS and user interface.

Start Date: September 30, 2016
Length: 36 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 16 $197,179; FY 17 $199,632; FY 18 $199,298

Abstract: The goal of this project is to enhance the process of producing accessible descriptions for textbook images for students with print disabilities. Graphical representations of information are widely used in education for science, technology, engineering, and mathematics. These graphics pose a particular challenge for users who have print disabilities, defined as persons who cannot effectively read print because of visual, physical, perceptual, developmental, cognitive, or learning impairments. Creating accessible instructional materials (AIM) by students with print disabilities is essential to promote better educational, and consequently better employment outcomes for this population in an increasingly technologically-oriented world. This project develops a set of open source software tools to improve current workflows in the authoring of image descriptions for scanned textbooks. The project evaluates the effectiveness of the developed tools both in terms of the efficiency of image description volunteers, and the accuracy and perceived quality of the produced descriptions.
Development of a Passive Prosthetic Ankle with Energy Return that Matches that of a Natural Ankle

Project Number: 90IF0040 (Formerly H133G120256)
Start Date: October 01, 2012
Length: 36 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 12 $199,862; FY 13 $199,733; FY 14 $199,920; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 5/31/2017)
Abstract: The goal of this project is to develop an inexpensive ankle prosthesis that behaves the same as a natural ankle. Current commercially available prostheses (e.g., SACH, ESAR feet) allow the amputee to walk, but with significant limitations. The primary functions of a natural ankle during walking are: (1) the absorption of ground reaction forces, and (2) the generation of forces to propel the body forward. Existing devices absorb ground reaction forces, but do not generate sufficient or appropriately timed forces to propel the body forward during push-off. This project develops a purely passive prosthetic ankle, which is low in cost and light in weight, with active behavior that allows the amputee to walk with near-normal gait. The device uses a network of springs in a multi-degree-of-freedom mechanism to provide the active and nonlinear behavior normally provided by a natural ankle. It does this without using sensors or actuators. The force generated along the leg during walking is converted into ankle torque used to propel the body forward during push-off. As a result, the need for a relatively large motor to generate push-off torque is eliminated.

NIDILRR Officer: William V. Schutz, PhD, MSW, MPH  
NIDILRR Funding: FY 13 $199,377; FY 14 $197,380; FY 15 $196,477; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project develops and validates a decision-making protocol that speech-language pathologists (SLPs) can use in assessing individuals with severe communication disabilities in order to make the best recommendations for the most effective augmentative and alternative communication (AAC) technologies. A comprehensive assessment and recommendation of appropriate AAC systems is a significant factor in the success of intervention for individuals with severe communication disabilities. Many SLPs report that they are not comfortable providing AAC services. In spite of increased graduate education in AAC, recent research shows that general practice SLPs do not have the skills to perform consistently effective assessments in this area. This protocol provides SLPs with practice guidelines to consistently and efficiently complete quality assessments that result in an appropriate match between the communication needs of an individual with severe disabilities and an AAC system, thereby allowing full participation in daily activities. Project objectives are to: (1) Develop effective AAC assessment protocols for adults and children with a variety of motor or language impairments, (2) establish content validity of the protocols and refine them as necessary, (3) establish consequential and face validity of the protocols, and (4) disseminate the results of the project.

NIDILRR Officer: Joyce Y. Caldwell
NIDILRR Funding: FY 14 $200,000; FY 15 $200,000; FY 16 $200,000

Abstract: This project develops a technology-based assessment and documentation system for home evaluation of individuals with disabilities returning home from institutional settings. The complexity of home evaluation requires the home evaluation expert to detail and integrate the myriad factors that affect a person’s ability to live independently. Currently, evaluators rely on pen-and-paper assessments and time-consuming tools that limit the number of evaluations that can be conducted. The aim of this project is to modernize this process with HESTIA, an in-depth, multi-faceted assessment to identify problems in the home environment that hamper a person’s ability to successfully live as independently as possible. HESTIA incorporates advances in handheld computing such as smart technology data collection through computer-based question branching, Bayesian-like predictive models, and cloud knowledgebase access to help a practitioner collect and integrate large amounts of complex data. HESTIA embeds intelligent measurement tools such as smart sensors that interpret distances for satisfactory door widths and meters that determine light and sound levels in the home. The tools are based on prototype mobile apps that use the sensors indigenous to hand-held devices available on the market. Three data-collection modules measure a person’s body structure and function, home environment accessibility, and performance in day-to-day activities. HESTIA combines the data, creating integrated reports to facilitate the home evaluation team’s identification of customized goals and select specific home interventions. Project activities include content development for HESTIA, development of three data collection and integrative report modules, and preliminary product validation.
Improving Rehabilitation and Reducing Re-Occurrence of Diabetic Foot Ulcers by Shifting Plantar Pressure with Exo-Tendon and Exo-Skeletal Footwear Systems

Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $74,997
Abstract: This project brings novel footwear towards commercialization which reduces plantar loading and accelerates and improves rehabilitation after diabetic foot ulcer and minimizes its reoccurrence towards helping people resume and maintain full employment and function. Project objectives include: (1) Iterative prototyping of non-motorized load-reducing footwear, integrating digital instrumentation to enable objective clinical measurement; (2) limited performance testing in both healthy volunteers and target diabetic patient population; and (3) capturing data for future digital modeling. This footwear has the potential to enable researchers, orthotics and prosthetics companies, and footwear companies to see new data that illuminates the opportunities for biomechanical leverage in footwear construction to off-load plantar pressure without motor assist. The expected products for Phase I are: (1) two prototype pair of pressure-reducing footwear, (2) instrumentation to characterize plantar pressure as well as lateral and frontal pressure peripheral to the ankle, and (3) a plan for Phase II effort.

Enhancing Quality of Life for Disabled Patients via High Humidified Flow Portable Oxygen System

Compact Membrane Systems, Inc.
335 Water Street
Newport, DE 19804-2410
rcook@compactmembrane.com

Principal Investigator: Stuart Nemser, PhD
Public Contact: Ryan Elizabeth Cook 302/999-7996

Project Number: 90BI0026
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $75,000

Abstract: The goal of this project is to develop a lightweight and compact system that provides 51 percent oxygen enriched air at four to six liters per minute equivalent pure oxygen to individuals with chronic obstructive pulmonary disease (COPD). Existing systems may not deliver a high-enough supply of oxygen to support these individuals who may be capable of activity and for whom increased activity would be medically beneficial. The system under development is a membrane-based, portable system to continuously supply four to six liters per minute (LPM) of humidified oxygen equivalent which can operate on commercial rechargeable batteries for four hours. Electronic systems provide adjustability plus ability to use AC and DC power supplies. This system provides the first ever four to six LPM-sustainable portable oxygen therapy (SPOT) weighing less than eight pounds. The system inherently provides humidified oxygen which minimizes drying out of nasal passages. In Phase I, this project fabricates the membranes and demonstrates productivity, oxygen purity, and self-humidification, then optimizes the membrane for long-term performance. The project conducts engineering and economic evaluations, as well as performance testing with respiratory patients.

NIDILRR Officer: Timothy Beatty
NIDILRR Funding: FY 16 $74,968

Abstract: This project develops a crowd-sourced English-to-ASL translation environment (CrEATE) to provide online English-to-ASL translation services and other assistive products for Deaf persons whose first language is American Sign Language (ASL) with the goal to improve the access of Deaf persons to English text in educational, job, health, and everyday settings. The projects builds on SigningAvatar technology, used by Vcom3D to create the Sign4Me English-to-ASL translation app and the Signing Science series of Dictionaries, and introduces key innovations in animation and in crowdsourcing needed to allow anyone who is proficient in English and ASL to contribute to the English-to-ASL translation capability. Vcom3D partners with Technical Education Research Centers (TERC) to conduct evaluations with high school and university students to determine the usability and accuracy of the CrEATE tools and to assess the potential role in advancing the access of Deaf persons to online English content. Research and development outcomes include a mobile app and server that enables collaboration among Deaf persons and their educators to translate English text to animated ASL; and indirectly an English-to-ASL translation service, enabled by the contributions of its users, resulting in increased access by Deaf persons to written information that is available on the Web.
Digital Aided Descriptions (DAD): Encouraging Learning Among Children with Visual Disabilities Through Creativity and Dialogue

Closed Caption Latina Corp dba Dicapta
1511 East State Road 434, Suite 2001
Winter Springs, FL 32708-5644
mvdiaz@dicapta.com

Principal Investigator: Maria Victoria Diaz
Public Contact: 407/389-0712

Project Number: 90BI0027
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $74,773

Abstract: The goal of this project is to provide children with visual disabilities accessible technology that will enhance their community living and participation in an educational setting. The main objective is to give these children access to visual images through added description, while improving their literacy skills through a collaborative process with their peers without visual disabilities. The customizable and user-friendly Digital Aided Descriptions (DAD) web platform is aimed toward children grades K to 6. Phase I of this project includes the development of a prototype, and an evaluation of feasibility and usability conducted in cooperation with Educational Vision Services, NYC Department of Education. Test results provide the foundation for Phase II where DAD is refined and finalized. Anticipated outcomes include progress in vocabulary and reading comprehension for both children with vision impairments and their classmates, enhanced socialization and engagement of children in a cooperative learning environment, and increased access to images used in education. Potential customers include Local Education Agencies, school districts, assistive technology providers, and federal and state technology assistance centers. The bilingual (English-Spanish) capabilities of DAD provide opportunities for distribution around the world.
WhenWear Advisor: A Cloud-Based Tool to Help Supervisors Increase Employment Options for Workers with Intellectual Disabilities

CreateAbility Concepts, Inc.
12821 East New Market Street
Carmel, IN 46032
steve@createabilityinc.com

Principal Investigator: Stephen M. Sutter 317/777-0356
Public Contact: 317/564-4677; Fax: 317/484-8401

Project Number: 90BI0029
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $75,000

Abstract: This project combines commercially-available tablets and neural networks with cloud computing to develop the WhenWear Advisor system to assist employees with intellectual disabilities (ID) to independently and successfully accomplish vocational tasks when provided with the proper automated prompts. Project objectives include: (1) determining end user requirements, (2) developing a proof-of-concept prototype of the system, (3) evaluating the utility of the prototype with the actual supervisors who represent a cross-section of the range of needs of a mobile worker, and (4) verifying the validity of the models created by the supervisor. Projects outcomes include: (1) supervisors being able to quickly generate high quality instructions for use in the employee electronic coach device, and (2) the resulting instructional prompts enabling the employee with an ID to perform at higher levels. The expected product is an intelligent cloud-based service that assists the supervisor in the creation of high quality instructional prompts, enabling workers with ID perform at higher levels and obtain higher salaries in community integrated employment.

SoundFit Ultrasonic Performance Diagnostic for Lower-Body Prostheses

FTL Labs Corporation
218 Strong Street
Amherst, MA 01002-1855
mike@ftllabscorp.com

Principal Investigator: Michael White, PhD
Public Contact: 303/317-6566

Project Number: 90BI0033
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 16 $75,000

Abstract: This project utilizes line-of-sight ultrasound transceivers for upper limb prosthetic design and fitting to address the needs of the larger lower-extremity patient population. The goal of this project is to develop a lower-limb socket optimization tool that can provide prosthetists quantifiable and actionable data to inform socket design. The objectives are to: (1) develop an ultrasonic socket fitment monitoring technology suitable for lower-extremity prosthetics; (2) develop visualization software that improves socket design and fitment for all clinical prosthetics providers; and (3) determine the best procedures and exercises for evaluating lower-extremity prosthesis performance. Anticipated outcomes include: (1) availability of a new enabling technology to quantitatively establish socket performance for individuals with lower-limb amputations; (2) initial efficacy testing that demonstrates the benefits of ultrasound-assisted fitment in a clinical setting; and (3) high performance lower-limb prosthetics will be more affordable and attainable. The expected products include a commercially-available “SoundFit” ultrasound fitment kit, clinician instructions for superior fitment and prosthetics performance, and scholarly articles that quantify ultrasonic fitment procedures to elucidate future development of prosthetic devices.
A Socket-Suspension Monitoring System for Lower Limb Amputees with Roll-on Liners

Assist Equipment Development, Inc.
10030 Green Level Church Road, Suite 802 #1238
Cary, NC 27519-8791
aedncsu@gmail.com
www.aedevelopment.us/

Principal Investigator: Ming Liu
Public Contact: 401/632-2963

Project Number: 90BI0034
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 16 $75,000

Abstract: The focus of this project is to develop a low-cost, wearable, easy to use, continuous socket/suspension monitoring system (SSMS) that tracks the relative displacement between the amputees’ residual limb and their socket or pistoning through the use of magnetic sensors. To do this, the project (1) designs and constructs the SSMS and demonstrates its capability through a bench top experiment; (2) identifies mounting locations of the SSMS to ensure that the SSMS generates reliable information about pistoning based on experimental data collected from below knee amputees; and (3) compares measurements from the SSMS and a clinical pistoning measurement approach to validate the capacity for the SSMS to monitor pistoning. The information collected from this system: (1) assists amputees in the management of their residual limb; (2) enables clinicians and prosthetists to track the performance of the socket’s suspension and make prompt clinical decisions; and (3) permits insurance companies to gather quantifiable and reliable evidence to identify prosthetic components and procedures that could reduce long-term health care costs.

Indoor Navigation Aid for Individuals with Visual Impairments in Unfamiliar Spaces

Vortant Technologies, LLC
88 High County Road
Weaverville, NC 28787-9374
phil@vortant.com

Principal Investigator: Philip R. Schaefer
Public Contact: 828/645-1026, ext. 114

Project Number: 90BI0031
Start Date: September 30, 2016
Length: 6 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 16 $74,775

Abstract: This project develops a technology solution to address the indoor navigation needs experienced by people with visual disabilities. Current navigation aids use GPS technology, which cannot be used indoors, or pre-loaded maps. This navigation aid may be used in indoor or outdoor spaces with no prior mapping required. The project obtains input and insights from end users and other stakeholders, resulting in hardware and smartphone apps in a proof-of-concept system. Usability testing and evaluation includes potential end users to prove feasibility and user acceptance of the design.
Accessible Environmental Information Application for Individuals with Visual Impairments

Sendero Group, LLC
739 Miller Drive
Davis, CA 95616-3620
www.SenderoGroup.com
www.Wayfinding.org

Principal Investigator: Michael May
Public Contact: 888/757-6810; Fax: 888/757-6807

Project Number: 90BISB0003
Start Date: September 30, 2016
Length: 24 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 16 $287,140; FY 17 $287,830

Abstract: This project is developing a scalable Accessible Environmental Information Application (AEI) with seamless outdoor to indoor navigation and a unified beacon database for people with visual disabilities. This application provides indoor orientation information to assist in navigating indoor public spaces including malls, airports, conference venues, and baseball stadiums. This project is expanding existing outdoor navigation systems with this AEI that provides orientation and location information indoors where GPS is unavailable. The objectives of this project are to: (1) evaluate the leading indoor navigation techniques to assess synergistic technological capabilities; (2) continue development of the AEI application to incorporate Phase I feedback and refine interface; (3) incorporate additional third party beacon databases; (4) create an open source beacon sharing standard and database; (5) analyze the success of the developed application in real world situations; and (6) complete project summaries and reporting.
Embedded Access to Signing of Science Terms and Definitions

Vcom3D, Inc.
12124 High Tech Avenue, Suite 250
Orlando, FL 32817-8382
eds@vcom3d.com

Principal Investigator: Edward Sims
Public Contact: 321/710-4841

Project Number: 90BISB0004
Start Date: September 30, 2016
Length: 24 months
NIDILRR Officer: William V. Schutz, PhD, MSW, MPH
NIDILRR Funding: FY 16 $287,170; FY 17 $286,867

Abstract: This project develops, deploys, and evaluates Embedded Access to Signing of Science Terms and Definitions (EAS): a client-server software system that delivers American Sign Language (ASL) and Signed English (SE) language support to Deaf and hard-of-hearing (Deaf/HH) students accessing any Web page that includes science, math, or healthcare information. The goal of this project is make scientific and technical Web content accessible to Deaf/HH students and adults in their own first language as well as in English, such that they may understand, perform independent research, and make informed decisions based on information available on any Web site of interest, even though the grade level of the content may exceed their English language skills. The objectives are: (1) to increase the science vocabulary and understanding of Deaf middle and high school students, their educators, and interpreters, (2) to more fully engage the students in science and in STEM and healthcare careers, and (3) to prepare Deaf/HH students and adults to make informed decisions based on scientific understanding. The long-term anticipated outcomes include: (1) improved Deaf/HH student engagement, performance, and career opportunities in STEM subjects, (2) improved teacher and interpreter knowledge of scientific terms and their signs, and (3) enhanced capability of Deaf/HH persons to make informed decisions about healthcare, environment, and daily living. The expected products are (1) a cloud-based, extensible lexicon/repository of at least 6,000 signs and definitions for science, math, and healthcare terms, in English, ASL, and SE; and (2) Web browser extensions and mobile apps that automatically highlight any word in any Web page for which signs and signed definitions are included in the lexicon, which, upon clicking, will render signed animations of the terms and definitions. These products will be commercialized for use by individuals, groups of users, and organizations serving the Deaf/HH population.

HomePortal – A Universal Home Environment for Individuals who are Blind or Have Visual Impairments

CreateAbility Concepts, Inc.
5610 Crawfordsville Road, Suite 2401
Indianapolis, IN 46224-3727
steve@createabilityinc.com

Principal Investigator: Stephen M. Sutter 317/777-0356
Public Contact: 317/564-4677; Fax: 317/484-8401

Project Number: 90BI0022
Start Date: September 29, 2015
Length: 24 months
NIDILRR Officer: Joseph A. DePhillips
NIDILRR Funding: FY 15 $287,497; FY 16 $287,499

Abstract: In previous Phase I research, this project demonstrated the technical merit, feasibility, and cost efficiency of combining commercially available technology with sophisticated pattern recognition and speech recognition and synthesis technology with an innovative approach and state-of-the-art software to deliver HomePortal, a universal console system to aid with daily living activities and remove barriers in the home for elderly individuals with multiple disabilities. During Phase II, the project builds upon the previous research to (1) complete the HomePortal system and application, (2) expand the features and functions, (3) perform extensive usability evaluations of the system in a range of settings, and (4) transition to commercialization. HomePortal is developed with natural support mechanisms in mind to promote independence, enhance self-esteem, and create opportunities for self-direction with a respective, non-invasive approach. This allows for activities of daily living to be accomplished with less assistance and without compromising safety.
The Intelligent Brace:
A Compliance Monitoring System for Scoliosis

Liberating Technologies, Inc.
325 Hopping Brook Road, Suite A
Holliston, MA 01746
jen.johansson@liberatingtech.com
www.liberatingtech.com

Principal Investigator: Jennifer Johansson
Public Contact: 508/893-6363; Fax: 508/893-9966

Project Number: 90BI0010 (Formerly H133S140097)
Start Date: October 01, 2014
Length: 24 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $288,502; FY 15 $286,578; FY 16 (No-cost extension through 9/29/2017)

Abstract: The goal of this project is to provide real-time monitoring and data logging to help both the patient and clinician determine if and when a scoliosis brace is being worn effectively. There is widespread use of bracing for treatment of adolescent idiopathic scoliosis, and recent studies have begun documenting its efficacy and establishing a positive correlation between brace wear and treatment success. However, these studies have also indicated that user compliance is a large factor in the efficacy of scoliosis brace treatment. Two factors comprise wear compliance: (1) the quantity of wear (i.e. does the actual wear time meet the prescribed wear time?), and (2) the quality of wear (i.e. is the fit as tight as prescribed?). Without both of these criteria being met, the effectiveness of the brace treatment is compromised. The Intelligent Brace for Scoliosis utilizes advanced Micro-Electro-Mechanical Systems technology to measure the pressure at clinically important sites within the brace to determine both the quality and quantity of fit. With the Intelligent Brace, the patient receives immediate feedback if the brace is improperly adjusted, allowing them to obtain an optimal fit and maximum benefit from the brace. In addition, it would provide currently unavailable measures of wear compliance to the clinician on the quality of fit of the brace to better inform brace treatment.

Therapeutic Intermittent Compression Socket

Liberating Technologies, Inc.
325 Hopping Brook Road, Suite A
Holliston, MA 01746
todd.farrell@liberatingtech.com
www.liberatingtech.com

Principal Investigator: Todd Farrell, PhD
Public Contact: 508/893-6363; Fax: 508/893-9966

Project Number: 90BI0020
Start Date: September 30, 2015
Length: 24 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 15 $283,031; FY 16 $291,900
Abstract: The purpose of this project is to develop a device that provides rapid intermittent compression to the residual limb of amputees that do not have good blood flow in their limbs. During Phase II, the project develops an actuator that: (1) mimics the pressures and rise times of currently available pneumatic intermittent compression systems, (2) produces a compression profile that has been shown to be clinically effective, (3) can be fit to residual limbs with different shapes and sizes, (4) can be easily incorporated into prosthetic socket, and (5) has had its efficacy demonstrated on human subjects. The device is portable to provide the user with therapy throughout the day, which frees the user from being confined to a chair for up to six hours each day in order to receive the prescribed amount of therapy. The goal of the device is to reduce the number of ulcers that form, help those ulcers that do form to heal, and ultimately reduce the number of reamputation surgeries that need to occur by increasing blood flow in the limb.
Wheelchair Optimal Route Planning for Public Urban and Indoor Spaces

Innovative Design Labs, Inc.
95 Seventh Avenue, NE
Minneapolis, MN 55413
info@innovativedesignlabs.com
www.innovativedesignlabs.com/projects.html

Principal Investigator: John Condon
Public Contact: 612/567-8554; Fax: 763/463-4817

Project Number: 90BI0002 (Formerly H133S140099)
Start Date: October 01, 2014
Length: 24 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 14 $273,041; FY 15 $301,745; FY 16 (No-cost extension through 9/29/2017)
Abstract: This project creates an easy-to-use navigation and route-planning aid system for wheelchair users to optimize wheelchair-specific paths through complex urban landscapes and indoor environments. Since the Americans with Disabilities Act Accessibility Guidelines were established in 1990, the ability of wheelchair users to navigate public spaces has greatly improved. However, there are still many areas in which modification for accessibility was not “readily achievable,” and therefore, may not be conducive to wheelchair travel. The system under Phase II development tracks the location of wheelchair users in indoor locations and provides wheelchair specific mobility guidance using a crowd-sources model of data collection. The system is comprised of navigation electronics attached to the wheelchair, and a software application to provide a wheelchair user with a graphical, intuitive interface for cloud-based online routing tools. This system improves access and independence for people with limited mobility and allows wheelchair users freedom of movement between public and commercial buildings safely and efficiently.
Semantics-Aware Web Screen-Reading Assistant

Charmtech Labs, LLC
1500 Stony Brook Road
Stony Brook, NY 11794-4600
borodin@charmtechlabs.com

Principal Investigator: Yevgen Borodin, PhD
Public Contact: 888/533-7884; Fax: 631/323-5959

Project Number: 90BI0023
Start Date: September 30, 2015
Length: 24 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 15 $287,500; FY 16 $287,500

Abstract: This Phase II project builds upon previous research to develop a Semantics-Aware Web Screen-Reading Assistant that empowers people with vision impairments to interact with the Web more naturally and efficiently via a spoken-dialog interface that is aware of high-level semantic entities such as an article section, a date picker widget, etc. The Assistant organizes the web content into a collection of meaningful semantic entities by using the semantic cues in HTML5 and ARIA specifications, as well as automatically identifying such entities with intelligent content analysis algorithms. The ability to interact with semantic entities enables users to say commands such as “Read the article,” “Log in,” “Next result,” as well as interact with common widgets such as the Date-Picker by saying “Next month,” “Which day is March 13th,” etc. The Assistant provides a spoken-dialog interface to interact with users, interprets and disambiguates user utterances, maintains a dialog with the user, and automates browsing actions on behalf of the user. With the Assistant, users utilize fewer shortcuts, spend less time listening through irrelevant content, perform browsing tasks more efficiently, and, very importantly, do so without having to let go of the screen readers they are used to.
Interactive E-Learning to Promote Successful Postsecondary Employment Outcomes for Students with Intellectual Disabilities

3-C Institute for Social Development, Inc.
4364 Alston Avenue, Suite 300
Durham, NC 27713
childress@3cisd.com
www.3cisd.com/funding/grants/view/
federal-grants-contracts/90BI0021-01-00

Principal Investigator: Debra Childress, PhD
Public Contact: 919/677-0102, ext. 515

Project Number: 90BI0021
Start Date: September 30, 2015
Length: 24 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 15 $306,034; FY 16 $268,957

Abstract: This project creates a Web-based Occupational Resource Kit (W.O.R.K.), the first self-paced, adaptive job skills intervention designed specifically to meet the learning styles and social-emotional needs of students with intellectual disabilities. W.O.R.K. enhances students’ preparedness for postsecondary employment, optimizing the likelihood of success in the workforce following completion of high school. Project objectives include: (1) conduct iterative software development and testing with key stakeholders to inform the development of the program content and interface; (2) develop implementation materials, such as the Online Implementation Center, where providers can access program functions and implementation support tools; and (3) conduct pilot testing of the product with secondary students with intellectual disabilities to assess the usability and feasibility of the product in its intended educational delivery setting. In developing W.O.R.K, the project (1) engages secondary students with intellectual disabilities in a customized online interactive environment for scaffolded learning and practice, (2) increases educators’ access to the intervention through easy-to-use and feasible technology, (3) strengthens the home-school partnership through integrated resources, reports, and activities for easy sharing with parents, and (4) enhances educators’ skills for implementing the intervention through online professional development tools. The W.O.R.K. product provides instruction, support, and interactive exercises based on individual needs to promote the development of critical employment, self-determination, and advocacy skills of students with intellectual disabilities thereby supporting these individuals in achieving and maintaining employment.
Physiologically Compatible Hemodialysis Through Advanced Dialysate Regeneration

Chemica Technologies
2611 Southwest Third Avenue, Suite 250F
Portland, OR 97201-4957
taku@chemica.com
www.chemica.com/medicaldevices.htm

Principal Investigator: Takuji Tsukamoto, PhD
Public Contact: 503/352-0262; Fax: 503/352-0263

Project Number: 90BISB0002
Start Date: September 30, 2016
Length: 24 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 16 $322,222; FY 17 $252,492

Abstract: This project develops an advanced, portable hemodialysis regeneration system that significantly enhances the quality of life of end-stage renal disease (ESRD) patients. ESRD impairs physiological systems and functions, and is associated with disability, high morbidity and mortality. Hemodialysis is prescribed for the majority of individuals in the final stages of renal failure. Minimizing the loss of nutrients and improving dialysis delivery (length, frequency, and location) enables individuals with ESRD to feel better, have more energy, work more, and engage in activities in their communities. Project investigators use surface chemistry and material science techniques to develop an advanced dialysate regeneration system able to remove a broad spectrum of uremic toxins while minimizing the loss of nutrients such as amino acids, vitamins, and essential ions. Technical objectives include: (1) performing scale-up production of the components of the advanced dialysate regeneration system (DRS-2); (2) designing and constructing the prototype module (cartridge) to house the DRS-2; (3) proving the safety and efficacy of the DRS-2 in vitro; (4) performing overall efficacy and quality tests of the DRS-2 using spent dialysate; and (5) evaluating and summarizing Phase II processes and results.
Knowledge Translation

For NIDILRR, knowledge translation (KT) encompasses the multidimensional, active process of ensuring that new knowledge gained through the course of research ultimately improves the lives of people with disabilities and furthers their participation in society. KT involves not only knowledge validation, dissemination, and utilization but also the transfer of technology, particularly products and devices, from the research and development setting to the commercial marketplace to make possible widespread utilization of the products or devices. NIDILRR funds a number of KT projects focusing on different content areas, not only to assist NIDILRR grantees in their knowledge translation efforts through technical assistance, training, and other activities, but also to generate new knowledge and understanding of KT in the context of disability and rehabilitation.

Start Date: October 01, 2011
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 11 $800,000; FY 12 $799,999; FY 13 $799,999; FY 14 $800,000; FY 15 $799,999; FY 16 (No-cost extension through 9/29/2017)

Abstract: The mission of the Model Systems Knowledge Translation Center (MSKTC) is to enhance the rigor and relevance of the model systems research and to communicate this research effectively to all potential audiences. This project has three goals: (1) enhanced understanding of the quality and relevance of the findings of NIDILRR’s Spinal Cord Injury (SCI), Traumatic Brain Injury (TBI), and Burn Model Systems (MS) programs; (2) enhanced knowledge of advances in SCI, TBI, and Burn research among consumers, clinicians, and other end users of such information; and (3) the centralization of SCI, TBI, and Burn Model Systems resources for effective and uniform dissemination and technical assistance. These goals serve to guide the Center’s strategies and activities to create an impact on the target population, including the MS grantees and other researchers as well as the broader audience of people with disabilities and their families, clinicians and practitioners, and policymakers and advocates through services in three areas. Service Area 1 uses a systematic approach to identify, evaluate, and synthesize evidence-based research findings. Tasks under Service Area 1 include: (1) establishing and maintaining a Technical Review Committee, (2) establishing standards for systematic reviews, (3) conducting reviews and publishing results, and (4) conducting quick turnaround reviews. Service Area 2 offers a strategic approach in knowledge translation (KT) support to grantees. Tasks under Service Area 2 include: (1) KT technical assistance and training, (2) communities of practice focused on each injury area among all audiences, and (3) conducting consumer needs research. Service Area 3 creates a central location to host all the KT resources and uses a multifaceted approach to knowledge dissemination, in order to ensure that audiences have timely access to relevant information that (1) helps facilitate the knowledge translation process; (2) informs decisions surrounding rehabilitation options in the areas of SCI, TBI, and Burn; and (3) informs the professional practices to key audiences. Tasks under Service Area 2 include: (1) website redesign and maintenance, (2) MSKTC multimedia development, (3) an online dissemination toolkit development, and (4) outreach and dissemination.

Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 16 $791,998; FY 17 $791,950; FY 18 $791,950; FY 19 $791,950; FY 20 $791,950

Abstract: The Model Systems Knowledge Translation Center (MSKTC) advances a knowledge translation (KT) paradigm among Model System grantees to ensure that spinal cord injury (SCI), traumatic brain injury (TBI), and burn injury (Burn) research is relevant and accessible to people with disabilities and their families; researchers; practitioners, and clinicians; and policy makers and advocates. The goals of this project are to enhance understanding of SCI, TBI, and Burn rehabilitation research; increase awareness and use of SCI, TBI, and Burn Model Systems research findings by appropriate stakeholders; centralize SCI, TBI, and Burn Model Systems resources for effective and uniform provision of training, technical assistance, and dissemination; and increase capacity of Model System grantees to engage in KT activities. MSKTC designs and implements KT activities to accomplish the following objectives: conduct research on effective KT methods to increase awareness and use of Model Systems research; develop research-based, user-friendly products grounded in KT science; conduct KT training and technical assistance activities to increase KT capacities of Model System grantees; disseminate MSKTC resources to all potential stakeholders; and implement utilization activities to promote stakeholders’ awareness and use of Model Systems research for informed decision making. The overarching outcome of MSKTC is to improve the lives and services for people with SCI, TBI, and Burn. MSKTC generates
research-based information resources for all stakeholders and makes them available on the MSKTC website. This project is a partnership of the American Institutes for Research (AIR), Inova Health System, George Mason University, University of Alabama at Birmingham, and American Association of People with Disabilities.
TEST - Translating Evidence to Support Transitions: Improving Outcomes of Youth in Transition with Psychiatric Disabilities by Use and Adoption of Best Practice Transition Planning

University of Massachusetts Medical School
55 Lake Avenue North

Project Number: 90DP0080
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 15 $149,707; FY 16 $149,248; FY 17 $149,789; FY 18 $149,936; FY 19 $149,877

Abstract: The goal of this project is to increase use and adoption of best practices in planning the transition of high school students to postsecondary employment and/or school enrollment; specifically, students with emotional behavioral disturbance (EBD) receiving special education services. This includes transition planning with the ultimate goal to improve postsecondary outcomes for this population through knowledge translation, testing, and dissemination of NIDILRR-funded research findings. The project develops materials, procedures, and guides for implementing three research-informed best practices in high school transition planning: (1) written goals for a concentration of career and technical coursework during high school, (2) student-led transition planning efforts, and (3) representation of adult-serving disability agencies and colleges on transition teams. The TEST project is guided by the National Implementation Research Network Stage-Based Implementation Framework and has five project objectives that correspond to this framework: (1) Developing research-informed materials and procedures for use by transition planning teams that are tailored to youth with EBD in close coordination with end-users and a stakeholder team; (2) pilot-testing resulting TEST procedures and materials in one school district with an implementation stakeholder team, finalizing TEST procedures and materials; (3) providing TEST implementation support and technical assistance to transition teams in one state and developing a TEST implementation guide; (4) presenting TEST best practices and the implementation guide at a national capacity building institute for high school special education transition planning teams; and (5) widely disseminating TEST materials. Project outcomes include the development of guides and curricula for practicing and implementing best practices in transition planning for students with EBD and the wide-scale adoption and use of TEST practices, improving employment and education outcomes for students with EBD. This project is led by the University of Massachusetts Medical School’s Transitions Research and Training Center and the Systems and Psychosocial Advances Research Center. This project also benefits from assemblage of prominent organizations and individuals with expertise in adoption and use of best practices for transition support for students with disabilities, knowledge translation, research on transition, and local transition efforts.

Project Number: 90DP0054 (Formerly H133A130014)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 13 $924,512; FY 14 $924,511; FY 15 $924,511; FY 16 $924,564; FY 17 $924,559

Abstract: The objective of this project is to study and apply the theory and practice of knowledge translation (KT) to the knowledge outputs of NIDILRR technology grantees. Goals of this project are to increase the rate of successful technology transfer (TT) of rehabilitation projects by NIDILRR grantees to the marketplace and into engineering standards, increase understanding among rehabilitation engineers and disability researchers in development of TT processes and practices that lead to successful TT, and increase capacity of NIDILRR grantees to plan and engage in TT activities. Research Project 1, Grantee Evidence of TT Practices, uses case-based examples from grantees in technology innovation processes to demonstrate how their actions and decisions affect TT outputs and outcomes. Research Project 2, Profile of Industry TT Receptivity and Capacity, optimizes the likelihood of accomplishing TT by evaluating industry opportunities and constraints. Development Project 1, Generate Three Need to Know (NtK) Model Variants, utilizes planning and charting processes across three non-commercial output categories (standards and protocols, freeware, and instruments and tools) to increase capacity in TT and expand the original NtK Model for commercial products. Development Project 2, Collaborative Commercialization, utilizes partnerships between NIDILRR grantees and corporations to bring new or improved commercial products to the marketplace through two utilization activities: (1) Delivering Practice-Level TT Training, and (2) Demonstrating Program-Level NtK Model Uptake by External Agencies. These activities increase grantees’ ability to plan, implement, and manage TT capacity by teaching how to accommodate best practices within personnel, time, and resource constraints while demonstrating the use of the NtK Model by other government and advisory agencies. KT4TT operates at the School of Public Health and Health Professions, University at Buffalo (SUNY), in partnership with Western New York Independent Living Inc., and a team of international consulting experts.

Project Number: 90DP0008 (Formerly H133A100021)
Start Date: October 01, 2010
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 10 $399,994; FY 11 $399,994; FY 12 $399,992; FY 13 $399,992; FY 14 $399,995; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 4/29/2017)
Abstract: This project establishes a comprehensive program to identify, organize, and disseminate international research and development knowledge relevant to the disability and rehabilitation community in the US. The Center for International Rehabilitation Research Information and Exchange (CIRRIE-3) includes four coordinated sets of activities: database, dissemination, exchange, and cultural competence education. CIRRIE-3 continues to expand its Database of International Rehabilitation Research. In this cycle it is adding features making it comparable to major commercial databases. CIRRIE-3 continues to disseminate its previously created international information resources while developing new resources, including bibliographies on topics of interest to NIDILRR-funded projects; databases of cross-walks of rehabilitation instruments to the ICF and resources on universal design; and access to international literature on development methods for assistive technology. Additionally, CIRRIE-3 is developing a comparative profile of US and international research in 50 topic areas and conducting a conference in 2011 on the WHO World Report on Disability and Rehabilitation. CIRRIE-3 is conducting a program for international exchanges of research and development personnel from NIDILRR-funded projects and counterparts in other countries. Approximately 60 exchanges are occurring over the 5-year cycle. The focus of the program is on building productive research and development collaborations. CIRRIE-3 continues to develop educational resources for use in training future rehabilitation professionals to work effectively with persons with disabilities who were born in other countries. CIRRIE-3 is developing simulations involving cross-cultural rehabilitation with high fidelity manikins and standardized patients trained to mirror foreign-born rehabilitation clients. The CIRRIE-3 program is global in scope and encompasses all of the NIDILRR domains of disability and rehabilitation research and development.

Pittsburgh, PA 15213-3320
boninger@pitt.edu

Principal Investigator: Michael L. Boninger, MD; Lynn Worobey, PhD; Cindy Cai, PhD
Public Contact: 412/648-6979

Project Number: 90DP0078
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 15 $150,000; FY 16 $150,000; FY 17 $150,000; FY 18 $150,000; FY 19 $150,000

Abstract: This project focuses on the knowledge translation of transfer training and wheelchair maintenance into practice in order to improve transfers and wheelchair maintenance leading to decreased pain and increased independence for individuals with mobility disabilities. The multi-institution, consumer-focused team: (1) Develops and continually refines high-quality training products to translate wheelchair transfer and maintenance research to wheelchair users, their support systems, and clinicians; (2) integrates stakeholder feedback throughout all stages of material development; (3) creates self-assessment versions of the transfer assessment instrument and wheelchair maintenance training questionnaire as educational tools to enable wheelchair users to track progress and identify areas requiring further training; (4) disseminates and promotes utilization of materials to wheelchair users and their support systems including clinicians providing their care, nationally, and internationally; and (5) evaluates utilization of materials through focus groups, social media, satisfaction surveys, self-assessments, and population changes in reported pain and wheelchair breakdown. The University of Pittsburgh Model Center on Spinal Cord Injury is partnering with American Institutes for Research (AIR) and is joined by the United Spinal Association, and the Spina Bifida Association to bring connections to the target audience and enable stakeholder participation.

Project Number: 90DP0027 (Formerly H133A120012)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 12 $750,000; FY 13 $750,000; FY 14 $750,000; FY 15 $750,000; FY 16 $750,000

Abstract: This project serves as a primary knowledge translation (KT) resource for NIDILRR-funded researchers, developers, and KT brokers; addressing the need for access to and skills in implementing best practices; undertaking systematic reviews and other high-quality syntheses of research; and translating research findings and using them to make critical decisions. To address these needs, the Center provides an array of training, dissemination, utilization, and technical assistance activities, including: supports for the production of high quality systematic reviews and research syntheses, including long-term, individualized technical assistance; tools and training to assist in extracting data, assessing quality, and using evidence from systematic reviews in identifying research gaps and formulating research questions; training and assistance to help NIDILRR grantees meet the challenges of evidence standards; training and assistance addressing KT planning, including use of planning templates and tools; supports for NIDILRR grantees in the development of evidence-based knowledge products; establishment of a Consumer Review Panel to provide guidance in ensuring that knowledge products and KT strategies are relevant and accessible to knowledge users; ready access to an array of KT strategies, with information about evidence of their effectiveness, and support for their use among NIDILRR grantees; facilitation of collaborative work and information-sharing among NIDILRR grantees, through working groups and communities of practice; for knowledge users, awareness of and ready access to evidence-based knowledge through accessible web-based resources and social media; tools for knowledge users that facilitate the assessment of quality of systematic reviews and research syntheses, and the identification and utilization of high quality research evidence; and strategies to help NIDILRR grantees engage knowledge users in all phases of KT, from seeking and creating knowledge through its application.

Project Number: 90DP0077
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 15 $500,000; FY 16 $500,000; FY 17 $500,000; FY 18 $500,000; FY 19 $500,000

Abstract: The Center on Knowledge Translation for Employment Research has as its purpose: (1) to identify findings related to improving employment outcomes among individuals with disabilities that NIDILRR-funded researchers and other entities have produced, with a focus on the high-needs populations of adults with autism, and transition-aged youth and young adults with disabilities; (2) to determine what needs for research-based information are most pressing for stakeholders, such as individuals with disabilities and their families, vocational rehabilitation practitioners, the business community, and policymakers; and (3) to investigate and test knowledge translation strategies that can increase these stakeholders’ appropriate use of identified research findings that meet their reported needs. To address those purposes, this project (1) reviews NIDILRR-funded and other findings to identify how to meet stakeholders’ pressing information needs related to improving employment outcomes for specific populations of individuals with disabilities with especially high needs; (2) conducts research studies to test ways of helping target audiences to access and use the research-based practices identified (i.e., testing knowledge translation strategies); (3) develops research-based informational resources related to stakeholders’ informational needs and to NIDILRR researchers’ capacity to plan and implement KT activities and measure their outcomes; (4) widely disseminates project findings; (5) provides technical assistance to researchers to support their utilization of project resources regarding the incorporation of effective knowledge translation strategies into their research, development, and dissemination activities; (6) promotes collaboration among NIDILRR-funded researchers working in the employment field, and between these researchers and their stakeholder audiences that can benefit from use of their research findings.

Translating Evidence About Traumatic Brain Injury to Practice Within Washington State Department of Corrections

University of Washington
1959 Northeast Pacific Street, HSB BB-919
Seattle, WA 98195
mharniss@uw.edu

Principal Investigator: Mark Harniss, PhD; Kurt Johnson, PhD
Public Contact: 206/685-0289; Fax: 206/543-4779

Project Number: 90DP0079
Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 15 $150,000; FY 16 $150,000; FY 17 $150,000; FY 18 $150,000; FY 19 $150,000

Abstract: This project focuses on translating evidence about traumatic brain injury (TBI) into practice within the Washington State Department of Corrections (DOC). The goal is to improve interactions with offenders with TBI by helping front line staff understand what TBI is; how offenders might be affected by TBI; what they could do that would help in day-to-day management of problems faced by offenders with TBI (e.g., memory, communication, mood, impulsivity); how TBI might affect engagement in treatment programs; how TBI affects compliance with DOC rules and regulations; and how TBI might affect transition from corrections to community living. The goal is to affect change at two levels in the DOC by increasing awareness and knowledge about TBI system-wide, and developing and piloting intensive knowledge translation (KT) activities with front line staff who work with specific target populations (e.g., veterans, women, or individuals with disabilities) in order to translate knowledge into practice. These activities can then be generalized to other correctional facilities within the DOC. In order to achieve these goals, the project identifies and prioritizes research-based products on TBI from current and completed NIDILRR-funded projects that are most relevant for the DOC. Factsheets and evidence-based materials developed by previous NIDILRR-funded grants serve as starting points for integrating research-based evidence into practices within corrections. The project assesses the current level of TBI knowledge and programming within the DOC to identify knowledge gaps and potential barriers and facilitators to the use and adoption of NIDILRR-sponsored TBI evidence in DOC. Finally, the project develops and implements a comprehensive KT plan, including system-wide strategies and an intensive pilot intervention, as well as evaluating the effectiveness of knowledge translation strategies and overall processes, and providing a summary of findings for recommendations of informed practice within DOC and the broader criminal justice community.

Public Contact: 206/685-4889; Fax: 206/543-2779

Project Number: 90DP0053 (Formerly H133A130004)
Start Date: April 12, 2013
Length: 60 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 13 $350,000; FY 14 $350,000; FY 15 $350,000; FY 16 $350,000; FY 17 $350,000

Abstract: The purpose of the National Data and Statistical Center for the Burn Model Systems (BMS Data Center) is to (a) maintain and enhance a longitudinal database following individuals with burn injury, (b) support research on health outcomes in burn injury conducted by both researchers in the NIDILRR Burn Model Systems Centers (BMS Centers) and external to the BMS Centers, and (c) provide annual reports to the public. The project enhances the technological foundation of the BMS Database by adding more sophisticated reporting features; enhances the capacity of BMS Data Centers to collect high quality data on individuals with burn injury from all racial and ethnic backgrounds through training and technical assistance; improves the capacity of researchers within and outside of the BMS Centers to engage in research and statistical analysis of the longitudinal database through technical assistance and direct participation in research, statistical analysis, and writing; collaborates with other NIDILRR-funded data centers in spinal cord injury and traumatic brain injury and with national organizations that collect large datasets on burn injury, such as the American Burn Association’s National Burn Repository, to increase efficiency and reduce redundant effort; and improves the quality of information provided to the public through better reports and the development of consumer-friendly materials. The primary outcome across all five years of the project is the development of significant research evidence about the effects of burn injury on the lives of burn survivors through the maintenance and enhancement of a robust, high quality, longitudinal database; and through training and technical assistance to those who use it.
Spinal Cord Injury Model Systems

Project Number: 90DP0011 (Formerly H133A110002)
Start Date: October 01, 2011
Length: 60 months

NIDILRR Officer: Kenneth D. Wood, PhD

NIDILRR Funding: FY 11 $625,000; FY 12 $625,000; FY 13 $625,000; FY 14 $625,000; FY 15 $625,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: With the ultimate goal of advancing knowledge of spinal cord injury (SCI) outcomes, the National Spinal Cord Injury Statistical Center (NSCISC) provides resources and services that support the longitudinal Spinal Cord Injury Model System (SCIMS) Database, ensure high-quality data, and promote rigorous research. Project activities are planned with several target populations in mind: individuals with SCI, SCIMS centers, researchers who intend to use the database, and any person who needs SCI statistics. The web-based data management system is upgraded with advanced functionality and user-friendly features to enhance security, quality control, and data retrieval/reporting as well as support SCIMS module projects and research. High-quality reliable data are ensured through utilization of a network of experts; refinement of the Standard Operating Procedures; implementation of a comprehensive certification program for data collectors; monitoring data quality and conducting site visits; and enforcement of on-site quality assurance procedures, training, and technical assistance. A series of analyses are conducted to identify underlying factors that contribute to racial/ethnic differences in enrollment, retention, and responsiveness to interview questions, along with continued assessment of intercultural competence status and needs as a guide for the development of training materials. To increase the quantity and quality of SCIMS Database research, this project has four objectives: (1) intramural and collaborative research; (2) internship, award, and other training programs; (3) development of education and information resources for investigators; and (4) individual consultation and technical assistance. To enhance SCIMS Database continuity, two previously established mechanisms (subcontract and centralized data collection) are utilized for continued collection of follow-up data from unfunded SCIMS centers, and procedures are enacted to ensure high-quality reliable data. Moreover, this project implements an evaluation plan designed to assess the quality and quantity of project outputs with the impacts of advancing knowledge in SCI rehabilitation outcomes and facilitating changes in policy and clinical practice through SCIMS research.

NIDILRR Funding: FY 16 $662,500; FY 17 $662,500; FY 18 $662,500; FY 19 $662,500; FY 20 $662,500

Abstract: National Spinal Cord Injury Statistical Center (NSCISC) provides resources and services that support the Spinal Cord Injury Model Systems (SCIMS) Program and Database, with the goals of ensuring high-quality data in the Database and promoting rigorous SCIMS research and collaboration. Project activities are conducted with several target groups in mind: individuals with spinal cord injury (SCI), SCIMS Centers, and individuals who intend to access/use the Database for SCI information or research. The objectives include: (1) maintenance of the SCIMS Database through a secure web-based data management system; (2) assurance that high-quality data is collected from participants of all races/ethnicities through standard operating procedures, certification of Data Collectors, data quality monitoring, SCIMS Center site visits, cultural diversity needs assessment, training, and technical assistance; (3) improved accessibility and utilization of the SCIMS Database through implementation of a comprehensive public access plan, as well as through collaborative research, internship, award, workshops, information resources, and individual consultation and technical assistance; and (4) continuity of the SCIMS Database through subcontracts and centralized data collection for continued collection of follow-up data from defunded Centers. Outcomes for this center include improved representativeness of Database participants to the SCI population at large, increased quantity and quality of Database research and collaboration, established standards on culturally appropriate SCI research, and advanced knowledge in SCI outcomes. Products from this center include a web-based system that provides a secure environment and user-friendly features for data management and reporting; website-provided informational tools for searching SCI statistics and resources for researchers; annual statistics reports and consumer-friendly infographics; as well as research presentations and publications.

Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 16 $662,500; FY 17 $662,500; FY 18 $662,500; FY 19 $662,500; FY 20 $662,500

Abstract: The Traumatic Brain Injury Model Systems National Data and Statistical Center (NDSC) provides innovative technologies, training, and resources to the Traumatic Brain Injury Model Systems (TBIMS). Building upon a comprehensive system of data management, communication technologies, and operating procedures that emulate the best practices of clinical research organizations, the NDSC increases the rigor and efficiency of scientific efforts to longitudinally assess the experience of individuals with TBI and advance TBI rehabilitation. NDSC has nine project goals: (1) maintain the TBIMS National Database (NDB) providing for confidentiality, quality control, and data retrieval capabilities, using cost-effective and user-friendly technology; (2) provide training/technical assistance to TBIMS on subject retention, data collection procedures, data entry methods, appropriate use of study instruments, and monitoring data quality; (3) provide knowledge, training, and technical assistance to TBIMS on culturally-appropriate methods of longitudinal data collection and participant retention; (4) provide statistical/methodological consultation to TBIMS; (5) implement a mechanism for continued follow-up data collection from defunded TBIMS; (6) collaborate with Spinal Cord Injury and Burn Data Centers and the Model Systems Knowledge Translation Center (MSKTC); (7) coordinate on research projects of mutual interest with NIDILRR-funded projects; (8) involve individuals with disabilities in planning and implementing the research, training, and dissemination activities, and in evaluating its work; and (9) identify anticipated outcomes that are linked to stated grant objectives. NDSC introduces new innovations including web-based data collectors training; resources to support the important work of the TBIMS committees, module studies, and special interest groups; advanced longitudinal analytic strategies, and several proposed NDB analysis projects; new cultural competency resources and language translation services; collaboration with the MSKTC on a TBIMS exhibit and materials; and new collaborative partnerships. The success of the project is assessed by five measurable outcome goals: (1) advance TBI rehabilitation by increasing the scientific rigor and utilization the TBIMS NDB/Modules, as measured by an increase in the annual rate of peer-reviewed journal articles that cite the TBIMS NDB/Modules.
as the primary source of research data; (2) maintain the TBIMS NDB/Modules using cost-effective and user-friendly technologies as measured by user acceptance of new technologies/methodologies as indicated by annual customer evaluations; (3) ensure high-quality, reliable data in the TBIMS NDB/Modules by providing comprehensive technical support as measured by center quality support visit reports and data quality reports; (4) improve data collected from NDB participants of all racial/ethnic backgrounds as measured by an increase in the follow-up rate of minorities; and (5) enhance continuity of the TBIMS NDB by developing mechanisms/strategies for following participants enrolled by defunded centers as measured by improvement of follow-up rates of TBIMS NDB participants.

NIDILRR Funding: FY 11 $850,000; FY 12 $850,000; FY 13 $850,000; FY 14 $850,000; FY 15 $850,000; FY 16 (No-cost extension through 6/30/2017)

Abstract: The purpose of the Americans with Disabilities Act (ADA) Network Knowledge Translation Center (ADA Network-KTC) is to ensure that information and products developed and identified through the ten ADA regional centers are of high quality, based on the best available research evidence, and are deployed effectively to multiple key stakeholders; and to develop processes and technology to facilitate highly collaborative and efficient progress toward accomplishing these goals. Stakeholders include: employers, researchers, educators, policy makers, staff of state and local government agencies, individuals with disabilities, family members, and project staff in the ADA regional centers and other related federal and privately-funded organizations. To achieve this purpose the ADA Network-KTC has four project goals. Goal 1: Optimize the efficiency and impact of the ADA National Network’s training, technical assistance, and information dissemination by: (1) maintaining and further developing the ADA National Network’s website and ADA Document Portal, (2) developing an online system to enable the ADA Regional Centers to share training and technical assistance materials, (3) facilitating joint development of ADA products by the ADA Regional Centers to maximize resources and avoid duplication, and (4) organizing and providing logistical and financial support for annual meetings of the ADA Regional Centers. Goal 2: Increase the use of available ADA-related research findings to inform behavior, practices, or policies that improve equal access in society for individuals with disabilities by: (1) identifying topics of importance to ADA stakeholders in collaboration with the ADA Centers and other key informants, and by conducting systematic reviews of the evidence; (2) identifying topics for future research (knowledge gaps) to help individuals understand their rights and responsibilities under ADA; and (3) synthesizing information from systematic reviews, research publications, and expert consensus to develop stakeholder materials. Goal 3: Increase awareness and utilization of ADA-related research findings by appropriate ADA stakeholder groups by: (1) collaborating with the ADA Centers on developing individual KT plans that support a national KT implementation plan for the ADA National Network, and (2) coordinating and hosting one ADA research conference in year 5. Goal 4: Improve understanding of ADA stakeholders’ need for and receipt of ADA Network Services over time, including services to
address emerging issues related to compliance with ADA requirements by: (1) operating and maintaining the outcome measurement system; (2) collaborating with NIDILRR and the ADA Regional Centers to improve usability and accessibility; (3) developing a data sharing plan to facilitate program improvement and research; (4) monitoring data quality, and providing training and technical assistance on use of the database, and (5) development and implementation of a system for measuring and tracking outcomes of the ADA National Network.

NIDILRR Funding: FY 16 $850,000; FY 17 $850,000; FY 18 $850,000; FY 19 $850,000; FY 20 $850,000

Abstract: The purpose of the Americans with Disabilities Act (ADA) Network Knowledge Translation Center (ADA Network-KTC) is to ensure that information and products developed and identified through the ten ADA regional centers are of high quality, based on the best available research evidence, and are deployed effectively to multiple key stakeholders; and to develop processes and technology to facilitate highly collaborative and efficient progress toward accomplishing these goals. Stakeholders include: employers, researchers, educators, policy makers, staff of state and local government agencies, individuals with disabilities, family members, and project staff in the ADA regional centers and other related federal and privately-funded organizations. To achieve this purpose the ADA Network-KTC has four project goals. Goal 1: Optimize the efficiency and impact of the ADA National Network’s training, technical assistance, and information dissemination by: (1) maintaining and further developing the ADA National Network’s website and ADA Document Portal, (2) developing an online system to enable the ADA Regional Centers to share training and technical assistance materials, (3) facilitating joint development of ADA products by the ADA Regional Centers to maximize resources and avoid duplication, and (4) organizing and providing logistical and financial support for annual meetings of the ADA Regional Centers. Goal 2: Increase the use of available ADA-related research findings to inform behavior, practices, or policies that improve equal access in society for individuals with disabilities by: (1) identifying topics of importance to ADA stakeholders in collaboration with the ADA Centers and other key informants, and by conducting systematic reviews of the evidence; (2) identifying topics for future research (knowledge gaps) to help individuals understand their rights and responsibilities under ADA; and (3) synthesizing information from systematic reviews, research publications, and expert consensus to develop stakeholder materials. Goal 3: Increase awareness and utilization of ADA-related research findings by appropriate ADA stakeholder groups by: (1) collaborating with the ADA Centers on developing individual KT plans that support a national KT implementation plan for the ADA National Network, and
(2) coordinating and hosting one ADA research conference in year 5. Goal 4: Improve understanding of ADA stakeholders’ need for and receipt of ADA Network Services over time, including services to address emerging issues related to compliance with ADA requirements by: (1) operating and maintaining the outcome measurement system; (2) collaborating with NIDILRR and the ADA Regional Centers to improve usability and accessibility; (3) developing a data sharing plan to facilitate program improvement and research; (4) monitoring data quality, and providing training and technical assistance on use of the database, and (5) development and implementation of a system for measuring and tracking outcomes of the ADA National Network.

Start Date: September 28, 2015
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 15 $1,583,388; FY 16 $1,948,101; FY 17 $1,868,203; FY 18 $1,922,781; FY 19 $1,977,360
Abstract: The National Rehabilitation Information Center (NARIC) maintains a research library of more than 65,000 documents and responds to a wide range of information requests, providing facts and referral, database searches, and document delivery. Through telephone and online information referral, NARIC disseminates information gathered from NIDILRR-funded projects, other federal programs, and from journals, periodicals, newsletters, and multimedia. NARIC maintains REHABDATA, a bibliographic database on rehabilitation and disability issues, both in-house and online. Users are served in English and Spanish by telephone, mail, electronic communications, or in person. Current tasks include expanding the collection with international research, including data originally collected by the Center for International Rehabilitation Research Information and Exchange (CIRRIE); acquisition of digital media; maintaining and expanding a digital archive of original research documents; and knowledge translation activities in support of NIDILRR’s mission including citation analysis, long term project tracking, and promotion of NIDILRR-sponsored research. NARIC also prepares and publishes the annual NIDILRR Program Directory, available in database format from NARIC’s web site, and several regular publications highlighting NIDILRR research.

**NIDILRR Funding:** FY 13 $687,578; FY 14 $661,730; FY 15 $681,106; FY 16 $701,060; FY 17 $722,564

**Abstract:** AbleData provides objective information on assistive technology and rehabilitation equipment available from domestic and international sources to consumers, organizations, professionals, and caregivers within the United States. This project maintains and expands the AbleData database of assistive technology, develops information and referral services that are responsive to the special technology product needs of consumers and professionals, and provides data to major dissemination points to ensure wide distribution and availability of the information to all who need it. The AbleData database contains information on more than 40,000 commercially produced and custom-made assistive devices. All of the project’s resources are available free of charge on its website. Requests for information are answered via telephone, mail, electronic communications, or in person.
ADA National Network Projects

The Americans with Disabilities Act (ADA) opens more opportunities for persons with disabilities. It also places certain responsibilities on employers, transit and communication systems, state and local governments, and public accommodations. To assist covered parties to understand and comply with the ADA, NIDILRR has funded a network of grantees to provide information, training, and technical assistance to businesses and agencies with duties and responsibilities under the ADA, as well as to conduct ADA-related research. The current program includes ten regional centers, one collaborative research center, and one ADA knowledge translation center.

Project Number: 90DP0087
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Brian Bard
NIDILRR Funding: FY 16 $1,000,000; FY 17 $1,000,000; FY 18 $1,000,000 ; FY 19 $1,000,000; FY 20 $1,000,000

Abstract: The New England ADA Regional Center meets the increasingly complex challenges of providing outreach, training, technical assistance, information dissemination, and capacity building of the ADA core services. Project activities include an extensive training and information agenda with products designed for ease of use and maximum impact, and tailored to meet the needs and preferences of people with rights and responsibilities under the ADA. Services include information and training for individual, business, and government needs at the local, regional, and national levels. To address ADA knowledge and implementation gaps, the Center has established new research partnerships and two research priorities: (1) to collaborate with statisticians to generate nuanced state-level data of emerging and projected reasons for disability, and (2) a randomized digital survey of regional municipalities to assess barriers to non-compliance in collaboration with the MIT Department of Urban Studies and Planning. This research seeks to identify the emerging and projected profile of people with rights under the ADA at the state level, understand the factors that impede municipalities from implementing the ADA, and identify an intervention or an innovative approach that can facilitate implementation of the ADA at the municipal level. Center outputs include state-wide data sets that tell the story of disability today and in the coming years, a set of new digital and interactive information tools including the Title II Action Guide, and distance learning web courses, as well as information tools developed in response to the municipal survey. To increase capacity building among priority audiences, two new initiatives focus attention on accessibility for an aging population and those with behavioral health and substance use issues. New England is home to the three US states with the oldest average populations – Maine, Vermont, and New Hampshire. Under the ADA, the rights of aging populations everywhere are covered by the broad protections of the American Disabilities Act, as are those in recovery from substance use. Those rights are not widely understood among the public, nor in some cases among public officials or businesses. A mission of the New England ADA Regional Center is, through every action, to refresh an understanding of the ADA in New England for the 21st century as a tool for more inclusive society. This center serves Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, and Connecticut.

Project Number: 90DP0088
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Timothy Beatty
NIDILRR Funding: FY 16 $1,112,165; FY 17 $1,112,165; FY 18 $1,112,165; FY 19 $1,112,165; FY 20 $1,112,165

Abstract: The goal of the Northeast ADA Regional Center is to educate and empower the diverse range of ADA stakeholders throughout the region to increase their knowledge of the ADA, to make better decisions regarding disability inclusiveness, and to implement the ADA in their own lives, workplaces, businesses, and communities. The center provides high-quality services that are relevant and responsive to the needs of individuals and organizations who have rights and responsibilities under the ADA. While this project serves all ADA stakeholders, the project focuses on three groups identified as high need: (1) healthcare professionals, (2) small employers including state and local government’s Title I functions, and (3) facility access professionals. Outcomes include: Improved ADA stakeholders’ understanding of their rights and responsibilities under the ADA; identification of barriers to ADA compliance and development of innovative approaches to address these barriers; continuous improvement of the understanding of ADA stakeholders’ needs for and use of Center services; systematic enhancement of efficiency and effectiveness of Center services; and increasing the implementation of the ADA across the diverse stakeholders throughout the region. To ensure achievement of these outcomes, the Center engages in an array of activities in three core areas: (1) Stakeholder engagement activities through ADA services, (2) measurement and tracking, and (3) research. The Center’s research project, which focuses on implementation of the ADA in small local businesses, cuts across all of the supporting objectives, and builds upon and shapes activities in the other two core areas. This intervention research is designed to identify barriers and carriers to ADA implementation, and test innovative approaches for eliminating these barriers within small business organizations. These activities have been designed to ensure direct engagement with ADA stakeholders through different modalities and at different levels of intensity. These activities include outreach, information dissemination, technical assistance, training, and capacity building. The Center’s measurement and tracking activities include evaluation, needs assessment, and collaboration with local, regional, and national partners. This center serves New York, New Jersey, Puerto Rico, and the US Virgin Islands.

NIDILRR Funding: FY 16 $1,112,165; FY 17 $1,112,165; FY 18 $1,112,165; FY 19 $1,112,165; FY 20 $1,112,165

Abstract: The Mid-Atlantic ADA Regional Center identifies and disseminates the effective practices of individuals and entities which promote improved integration of individuals with disabilities into all areas of community life. The center has three areas of focus: Training, technical assistance, and information dissemination on all titles of the ADA, with a sharpened focus on educating individuals with disabilities about their rights; capacity building and outreach through local networks; and research in areas where barriers still occur for individuals with disabilities. The Mid-Atlantic ADA Center implements an operational plan of specific objectives and tasks associated with each of the following major project goals: (1) Improve the understanding and interpretation of the rights and responsibilities under the ADA for both individuals and entities, by expanding existing Mid-Atlantic ADA Center Networks, the hospitality initiative, and relationships with individuals with disabilities, the aging population, and organizations that represent these stakeholders; (2) identify barriers to compliance with the ADA and develop innovative strategies to eliminate such barriers through research activities focusing on the needs of State and Local governments and individuals with disabilities; (3) identify emerging issues and develop innovative strategies to address ADA compliance issues experienced by individuals with disabilities who are aging and youth with disabilities by strengthening the working relationships with Centers for Independent Living, Vocational Rehabilitation, Area Agencies on Aging, and Aging and Disability Resource Centers; and (4) enhance the efficiency and effectiveness of the ADA Network Services by building the capacity of the Mid-Atlantic ADA Networks to serve Region III through training, technical, assistance, and information dissemination. Specific and detailed training, dissemination, and technical assistance activities to pursue these goals are augmented by carefully designed activities to study and validate best practices and policies through a comprehensive quantitative/qualitative research design as well as by direct cooperation with the ADA Knowledge Translation (KT) Center, other Regional ADA Centers, and other NIDILRR-funded research centers to identify areas of research need and to participate in mutual research projects. This center serves Pennsylvania, Delaware, Maryland, Virginia, West Virginia, and the District of Columbia.

NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 11 $1,241,643; FY 12 $1,242,940; FY 13 $1,244,127; FY 14 $1,242,860; FY 15 $1,243,316; FY 16 (No-cost extension through 9/29/2017)

Abstract: The Southeast ADA Center Consortium consists of over 100 organizations and entities across 8 states representing all Americans with Disabilities Act (ADA) stakeholders, including people with disabilities, businesses, state and local government agencies, service providers, vocational rehabilitation agencies, and others. The Southeast ADA Center: (1) facilitates implementation of and compliance with the ADA through training, technical assistance, and broad dissemination of accurate, timely information; (2) conducts outreach to a diverse audience of stakeholders; (3) builds the ADA knowledge and implementation capacity of the state and local affiliates; and (4) advances the social, civic, and economic participation of people with disabilities through targeted outreach, knowledge translation, and capacity building in the region. The Center improves understanding by ADA stakeholders of their rights and responsibilities under the ADA and related laws, and improves knowledge about evidence-based best practices for advancing civil rights and increasing disability equality using a Knowledge-to-Action-based framework for knowledge translation that incorporates outreach, training, dissemination, technical assistance, and capacity-building to the next level and ensures behavioral and practice-oriented changes by ADA stakeholders. A comprehensive plan of continuous quality improvement and evaluation tracks these mid-term outcomes to demonstrate change across the region.

NIDILRR Officer: Timothy Beatty
NIDILRR Funding: FY 16 $1,246,000; FY 17 $1,246,000; FY 18 $1,246,000; FY 19 $1,246,000; FY 20 $1,246,000

Abstract: The goals of the Southeast ADA Regional Center are to (1) promote voluntary compliance, effective implementation, and transcendence of the ADA; (2) increase ADA understanding and awareness; (3) encourage meaningful partnerships among government, business, and disability communities to facilitate effective ADA implementation; and (4) conduct leading-edge research to reduce and eliminate barriers to employment and economic self-sufficiency, so as to increase civic and social participation of Americans with disabilities. Project objectives include: (1) expanding the Center’s provision of technical assistance, training, and dissemination of ADA information; (2) identifying structural, program, and technological barriers to ADA compliance by using the Center’s innovative participatory action research (PAR) model to increase access to financial institutions and related services; (3) using new data collection to identify and respond to stakeholder’s needs for services and supports from the Center and the ADA National Network; and (4) enhancing the efficiency and effectiveness of ADA Network Services by building on regional and national leadership, collaboration, and record of success. The Center’s core outcomes and deliverables include: (1) Expansion of training initiatives: furthering growth of ADA Trainer Network-Southeast in collaboration with partners, development of a new web course on all ADA Titles for access to financial institutions, WADA ADA Live!, Tax Access with community non-profit partners, and continued improvement of online courses; (2) development and expansion of ADA materials: targeted outreach and development of materials to meet the diverse needs of multicultural groups, including individuals who speak Spanish and the aging community, continuation of ADA Anniversary Tool Kit, legal briefs and alerts current with ADA developments, enhancement of project’s accessible website and social media outreach; (3) continued provision of highest quality technical assistance: advice through the toll-free number, email, social media, and website forms; development of new web-
site portals for stakeholders; (4) implementation of PAR research model: evaluate and increase access to financial institutions; develop a Financial Inclusion Scale (FIS) to be widely shared at regional and national levels; and (5) improved access to services of the ADA National Network: enhanced collaboration with regional ADA Centers, ADA Knowledge Translation Center, NIDILRR, and Administration on Community Living to increase outreach to all targeted stakeholders and rigorously evaluate effectiveness of services. The Center is a project of the Burton Blatt Institute (BBI) at Syracuse University (SU) in partnership with various organizations including: Affiliate Leadership Network of 8 State Affiliates and their network of 52 local affiliates; training partnership with Southeast Center Director’s Association that includes majority of Centers for Independent Living (CILs) in the Southeast; Aging and Disability Advisory Group; Multi-Cultural Outreach Collaboration with Morehouse College, Urban Leagues in Atlanta, and Louisville and Lexington, Kentucky, and Mississippi Valley State University; Bluegrass ADA Employment Consortium; Association of People Supporting Employment First (APSE); and Financial Research Advisory Group. This center serves Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.
The Great Lakes ADA Center promotes awareness and compliance with the Americans with Disabilities Act (ADA). Project goals and objectives center on the provision of high quality, timely, and accurate technical assistance, training, and material dissemination to identified target audiences. The Great Lakes ADA Center provides responsive and proactive services utilizing a comprehensive service delivery model. The technical assistance, training, and information needs of the individuals and their families, employers, business, government, educational entities, design professionals, and employment programs serving veterans with disabilities are part of an ongoing needs assessment, and programs and activities are tailored accordingly. Project activities and goals include: (1) operation of a toll-free number and use of current and emerging technologies for information and referral; (2) enhancement of the Center’s existing regional network of individuals and organizations who can provide on-site consultation, technical assistance, and training as needed; (3) conducting and sponsoring training events and activities at the local, state, and regional level focused on raising awareness of the ADA; (4) development and dissemination of technical assistance and training products and tools that are evidence based; (5) identification and dissemination of best practices related to the recruitment, hiring, and retention of qualified individuals with disabilities by employers and employment training programs; (6) promotion of the acquisition and utilization of accessible information technology by employers, business, government, and educational institutions; and (7) utilization of existing and emerging technology to promote the exchange of information including websites, list serves, e-newsletters, mobile applications, social media, multi-faceted distance learning strategies and techniques, self-paced learning, and web-based assessment tools. Through partnerships and collaboration at the local, state, regional, and national level, the Center maximizes resources ensuring that a high quality and quantity of activity occurs.

NIDILRR Funding: FY 11 $1,110,822; FY 12 $1,110,958; FY 13 $1,110,458 ; FY 14 $1,111,192; FY 15 $1,111,032; FY 16 (No-cost extension through 9/29/2017)

Abstract: The Southwest ADA Center at ILRU provides outreach, training, technical assistance, information, dissemination, and capacity building to the target population of individuals and entities with rights and responsibilities under the Americans with Disabilities Act (ADA), including local, regional, and national groups representing stakeholders. Special target audiences include: minority individuals with disabilities, postsecondary institutions, small businesses, veterans with disabilities, individuals newly covered by the ADA Amendments Act (ADAAA) of 2008, employers, hospitality industry, and emergency preparedness professionals. The purpose of the Southwest ADA Center is to maximize the full inclusion and integration into society of individuals with disabilities, especially individuals with severe disabilities, and to improve services authorized under the Rehabilitation Act. The goal of the Center is to improve understanding by stakeholders of their rights and responsibilities under the ADA by implementing a sustained program of ADA Network Services, which include: (1) high impact training at national, regional, state, and local levels with a large cadre of experienced, qualified, and well-trained instructors using the highest quality training materials vetted by the ADA Knowledge Translation (KT) Center, other ADA Centers, affiliates, trainers, and targeted stakeholders, including materials from U.S. Departments of Justice and Education, other ADA Centers, federally funded projects, and ILRU; (2) dissemination of knowledge about the rights and responsibilities of the ADA utilizing technology ranging from print mail to the latest popular social media tools and networking websites to reach the broadest audiences; (3) timely, relevant, accurate technical assistance activities that respond to the needs of individuals and entities that are well-managed, appropriately staffed, and evaluated regularly to identify trends to improve future services; (4) a collaborating group of 55+ experienced, skilled, and well-respected individuals and organizations from Region VI and around the country to assist ILRU’s highly skilled and experienced personnel in delivering proposed services to targeted stakeholders; (6) collaboration with the ADA KT Center to record and analyze data about stakeholder requests for information and services; and (7) enhancement of efficiency and effectiveness of the overall ADA Network Services by partnering with the ADA KT Center and Regional Centers to develop and distribute products and services relevant to ADA stakeholders in multiple regions.

Abstract: The goal of the Southwest ADA Regional Center (SWADA) is to maximize the full inclusion and integration of individuals with disabilities so they can fully participate in their communities through the ADA. SWADA serves federal region VI and conducts activities to address barriers for people with disabilities in employment, access to state and local government programs and services, and access to places of public accommodations. SWADA provides several services to benefit individuals and entities with rights and responsibilities under the ADA (ADA stakeholders): high impact training with experienced, qualified, and well-trained trainers; dissemination of information about the ADA utilizing methods ranging from print mail to the latest popular social media tools and networking websites to reach the broadest audiences; timely, relevant, accurate technical assistance that responds to the needs of the requesting individuals and entities; innovative research into access barriers experienced by people with disabilities and improving the capacity of entities to serve them; and collaboration with affiliates and the ADA Network Services to efficiently deliver these services nationwide. SWADA improves the knowledge of stakeholders on their rights and responsibilities under the ADA and improves the capacity of service providers to provide ADA trainings, technical assistance, and dissemination to their consumers. ADA stakeholders utilize the knowledge and capacity to address barriers and improve access for people with disabilities. SWADA Center products include: Training modules for businesses, health care providers, and corrections; trainings to various targeted entities; webinars on emerging legal and disability issues; publications; protocol for referring cancer survivors to vocational rehabilitation or ADA National Network services; and best practices for removing barriers to service animal users. This center serves Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 16 $1,000,000; FY 17 $1,000,000; FY 18 $1,000,000; FY 19 $1,000,000; FY 20 $1,000,000

Abstract: The Great Plains ADA Regional Center continues to expand services as the ADA National Network Regional Center for federal Region VII, serving Kansas, Iowa, Missouri, and Nebraska. The mission of the Center is to ensure the full opportunity for participation of persons with disabilities and their families in all facets of American life by providing professional-quality services to Americans with Disabilities Act (ADA) stakeholders. Target populations include all entities and individuals with disability-related issues that have rights and responsibilities under the ADA. The Great Plains ADA Regional Center: (1) implements a sustained program of outreach, training, technical assistance, information dissemination, and capacity building (collectively ADA Network Services); (2) provides information to ADA stakeholders on both longstanding ADA requirements as well as the ADA Amendments Act, the 2010 Standards for Accessible Design, and subsequent judicial/regulatory changes; (3) identifies best practices through collaborative initiatives addressing emerging critical issues such as Olmstead implementation, emergency preparedness, and the professionalization of ADA Coordinators; (4) sponsors the National ADA Symposium, which offers a comprehensive matrix of training opportunities presented by nationally recognized authorities and experts in their fields; and (5) partners with the ADA Network Knowledge Translation Center and other ADA Regional Centers to develop, provide, and distribute ADA training and technical assistance materials and other informational products and services. Through a collaborative structure of partnerships with local, regional, and national organizations, the Center provides core service delivery of ADA knowledge to the stakeholders of Region VII.

Project Number: 90DP0094
Start Date: September 30, 2016
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 16 $1,000,000; FY 17 $1,000,000; FY 18 $1,000,000; FY 19 $1,000,000; FY 20 $1,000,000
Abstract: The Rocky Mountain ADA Regional Center provides information, guidance, and training on the Americans with Disabilities Act (ADA) tailored to meet the needs of individuals and organizations in Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming. The Center presents a comprehensive program of training, dissemination, and technical assistance activities designed to move toward full implementation of the ADA throughout the region. The Center continues its program of technical assistance based on the concept of mass customization to address the specific needs of stakeholders across the region. The training program takes advantage of technology and customized curricula to ensure maximum impact of training activities. Dissemination efforts provide tailored materials that offer actionable information for the specific needs of stakeholders. The Center also has an extensive plan of evaluation and ongoing regional needs assessment research to maximize the efficiency and effectiveness of the ADA Network services.
ADA National Network
Region IX - AZ, CA, HI, NV, and the Pacific Basin

Pacific ADA National Network Regional Center - Region IX

Project Number: 90DP0021 (Formerly H133A110024)
Start Date: October 01, 2011
Length: 60 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 11 $1,246,000; FY 12 $1,246,000; FY 13 $1,246,000; FY 14 $1,246,000; FY 15 $1,246,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: The Pacific ADA Center implements an integrated, multi-dimensional initiative that facilitates enhanced awareness, understanding, compliance, and implementation of the Americans with Disabilities Act (ADA) in all states and territories within the region. The program places special emphasis on collaborations by expanding the existing Pacific Region ADA Network of affiliate and local community organizations to maximize meeting the grassroots-level needs of ADA stakeholders (such as employers, businesses, state and local governments, and individuals with disabilities), as well as the development of resources in the emerging areas of accessible information technology and emergency preparedness. Pacific ADA Center goals include: (1) improving understanding regarding rights and responsibilities and implementation of the Americans with Disabilities Act of 1990, as amended (ADA), the ADA Amendments Act of 2008 (ADAAA) and corresponding regulations for Title I from the U.S. Equal Employment Opportunity Commission, the regulations for Title II and III of the ADA published by the U.S. Department of Justice in 2010, as well as emerging compliance issues in information technologies and emergency preparedness, and continuing developments in ADA case law, policy, and implementation through comprehensive training, dissemination, and technical assistance activities to individuals with rights and responsibilities under the ADA; (2) improving understanding of ADA stakeholders’ needs for, and receipt of, Region IX services over time through data entry and analysis of Center activities in conjunction with the ADA National Network made up of the ADA Knowledge Translation (KT) Center and other ADA Regional Centers; and (3) enhancing the efficiency and effectiveness of ADA information dissemination, awareness, and referral activities by establishing effective, coordinated local, regional, and national resource networks, including by partnering with the ADA KT Center and other regional ADA Centers to develop, implement, and evaluate materials, products, trainings, and services that are useful to ADA stakeholders. The Pacific ADA Center conducts a comprehensive evaluation that monitors the quality, scope, and effectiveness of all Center programs and activities, including a quantitative evaluation program that tracks programmatic outputs related to Center services, and a qualitative evaluation program designed to assess the impacts and outcomes of its work.

**Abstract:** The Northwest ADA Regional Center (NWADA) provides a sustained program of outreach, training, technical assistance, capacity building, information dissemination, and research services and activities. The goals and objectives of this project are: (1) to improve understanding by ADA stakeholders of their rights and responsibilities under the ADA, including addressing established ADA requirements and more recent legislative and regulatory changes, as well as emerging areas of focus; (2) to identify of barriers to compliance with the ADA, and to develop and implement innovative approaches for eliminating these barriers; (3) to improve understanding of the ADA stakeholders’ need for and receipt of ADA Network services over time, including services which address emerging issues related to compliance with ADA requirements; and (4) to enhance efficiency and effectiveness of ADA Network Services and delivery. Project research focuses on understanding and addressing health care access issues while engaging a broad representation of recipient and provider health care groups across the states served by the NWADA. This center serves Alaska, Idaho, Oregon, and Washington.

Project Number: 90DP0026 (Formerly H133A120008)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: Pimjai Sudsawad, ScD
NIDILRR Funding: FY 12 $613,091; FY 13 $614,007; FY 14 $613,688; FY 15 $613,828; FY 16 $613,651

Abstract: This project examines what factors are influencing societal participation of citizens with disabilities within and at community and regional levels. The project conducts multiregional strategic gap analyses across three primary participation areas mandated by the ADA: community living, community participation, and work/economic. This includes mining of existing large population and community datasets to inform the benchmarking of key participation disparities and promising practices at state, regional, and community levels also includes collecting new individual data with people who are trying to move out of nursing homes and institutions into the community post-ADA and Olmstead Decision to add their participation experiences and issues, voices that have not been represented in existing ADA and participation research. As a second aim, this consortium of ADA Regional Centers and a network of disability and ADA stakeholders utilizes a participatory Strategic Gap Analysis process to (1) identify key indicators of high priority and high feasibility to collect in communities, (2) create a Community Participation Action Toolkit (CPAT) for assessing these indicators within communities, (3) pilot test this Toolkit within 18 communities across 6 collaborating ADA Center regions, (4) analyze results and translate back to communities in the form of benchmarking reports, and (5) create a toolkit of resources to accompany CPAT for both ADA Centers and community stakeholders to plan initiatives in their communities to reduce disparities and increase full participation. The aim is to create a tool and a systematic process for assessing community participation at the community level that could be shared with communities via the ADA Center collaboration, and formally linked to ADA Center information resources and technical assistance, as well as future participatory research initiatives.
Capacity Building for Rehabilitation Research and Training

A stated objective of NIDILRR’s long-range plan is to provide for the training of emerging talent and leadership in research and development. To that end, NIDILRR builds the Nation’s capacity to conduct research and development activities that make positive contributions to the lives of individuals with disabilities across the domains of employment, community living and participation, and health and function. Activities funded in this area include fellowship and advanced rehabilitation research training programs where emerging talent and leadership in research and engineering are developed. These activities include opportunities for individuals with disabilities as well as individuals from minority backgrounds.

Public Contact: 405/530-7530; Fax: 405/962-1638

Project Number: 90RT5024 (Formerly H133B130023)
Start Date: October 01, 2013
Length: 60 months
NIDILRR Officer: Shelley Reeves
NIDILRR Funding: FY 13 $875,000; FY 14 $875,000; FY 15 $875,000; FY 16 $875,000; FY 17 $875,000

Abstract: This project engages minority entities (MEs) to generate new knowledge leading to improved outcomes for persons from traditionally underserved racial and ethnic populations and communities and to enhance research capacity and infrastructure at minority-serving institutions. The project works with six MEs to address research infrastructure challenges and enhance the research skills of their individual faculty scholars and students. The following themes are addressed through five major studies and numerous capacity-building activities: (1) describe and evaluate an emerging research team mentorship model across six different MEs; (2) examine factors that contribute to disability and rehabilitation research leaders’ career development and success to increase the number of talented researchers available to mentor ME junior investigators; (3) forecast the impact of new US citizen and legal permanent resident populations and trends on state vocational rehabilitation agencies’ (SVRAs) systems capacity to serve immigrants of color with disabilities; (4) describe SVRAs and Veteran Affairs co-service strategies aimed at placing veterans of color with disabilities into employment; (5) examine ME faculty scholars’ personal/intrinsic factors and extrinsic rewards that motivate them to conduct disability and rehabilitation research; and (6) pilot-test an emerging research capacity-building and infrastructure model across six different MEs. This project is developing and implementing a partnership plan that ensures that all activities are predominantly focused on research capacity and infrastructure building. The project plans a state-of-the-science conference in the fourth year to discuss the research topics identified and devotes attention to demonstrating how findings are translated to practical applications in research, service initiatives, and policy development for persons of color with disabilities and ME research capacity-building efforts.

A Comparison of Reactive and Voluntary Lateral Step Training to Improve Balance and Reduce Falls in Persons Post-Stroke

Vicky Gray, PT, PhD
University of Maryland School of Medicine
Department of Physical Therapy and Rehabilitation Science
Allied Health Building, Room 115
100 Penn Street
Baltimore, MD 21201

Principal Investigator: Vicky Gray, PT, PhD
Public Contact: 410/706-3778

Project Number: 90SF0005 (Formerly H133F140027)
Start Date: October 01, 2014
Length: 12 months

NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 14 $75,000; FY 15 (No-cost extension through 9/29/2016); FY 16 (No-cost extension through 9/29/2017)

Abstract: This project compares the effects of two exercise training approaches, rapid voluntary lateral step training and reactive lateral step training on lateral balance control in persons with chronic stroke. Each approach is evaluated by improvements in (1) step initiation time and execution speed, first step length and height; (3) functional balance and mobility assessed by the Community Balance and Mobility Scale; and (3) prospective falls. The goal of the project is to develop a mechanism-based therapeutic intervention to improve protective stepping strategies and lateral balance function and reduce falls in persons post-stroke. The project also disseminates information through conferences such as the Combined Sections Meeting and the Canadian Physiotherapy Association. Study results will be published in rehabilitation journals.
Barriers and Unmet Needs for Reproductive Health Care Experienced by Women with Early Onset Mobility Impairments

Linda Marie Long-Bellil, PhD, JD
35 Brentwood Drive
Holden, MA 01520-1931
linda.long@umassmed.edu

Principal Investigator: Linda Marie Long-Bellil, PhD, JD
Public Contact: 508/856-8417

Project Number: 90SF0018
Start Date: September 30, 2016
Length: 12 months
NIDILRR Officer: Amanda Reichard, PhD
NIDILRR Funding: FY 16 $80,000

Abstract: This project utilizes a qualitative study to explore the experiences of women with early onset mobility impairments with reproductive health care, their unmet needs and the impact that inadequate care may have on their health and function, life choices, and role participation. Nearly 25 years after passage of the Americans with Disabilities Act (ADA), people with disabilities still face substantial barriers to adequate and appropriate health care. Women with mobility impairments report that many practices are inaccessible to them and that providers too often see them as asexual, failing to address their needs for preventative screening and discouraging their desire to become pregnant and raise children. Providers’ failure to address their reproductive health care needs can adversely affect women with mobility impairments throughout the life span. This project uses interviews with approximately 32 women with early onset mobility impairments to explore these issues as they affect women throughout the life span.
Development of a Pneumatic Power Assist Wheelchair (PneuPAW)

University of Pittsburgh
Human Engineering Research Laboratories
6425 Penn Avenue, Suite 400
Pittsburgh, PA 15206-4037

Principal Investigator: Hongwu Wang, PhD
Public Contact: 412/624-1255

Project Number: 90SF0019
Start Date: September 30, 2016
Length: 12 months
NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 16 $80,000

Abstract: The goal of this project is to develop a novel pneumatically powered pushrim activated power assist wheelchair (PneuPAW) and investigate its compliance with ANSI/RESNA wheelchair standards, and usability via focus group study. Independent mobility is critically important for many aspects of life. Whether performing activities of daily living, attending school, or sustaining a vocation, mobility limitations can have a significant negative impact on the ability to succeed and quality of life. The wheelchair is one of, if not the most, common and effective assistive device available for people with significant mobility impairments. Pushrim-activated power-assist wheelchairs (PAPAWs) are alternatives to manual and electric powered wheelchairs for individuals with spinal cord injury or dysfunction who are at risk for complications such as upper limb injury and fatigue when using a manual wheelchair. The PneuPAW in production is expected to cost less than the current commercial devices (e.g., e-Motion and Xtender) due to the simplified design without batteries and electronics. The PneuPAW will have a market advantage over current PAPAWs due to its lighter weight, improved versatility, and equivalent or better performance. The new technology could stimulate innovation and results in lighter weight, more reliable, and environmentally-friendly power assist wheelchairs. The outcomes of this research offer a helpful and medically necessary alternative that can prevent upper limb disorders common to long-term manual wheelchair propulsion and promote or maintain health and improve mobility. PneuPAW requires less effort to propel, especially in environments such as inclines, uneven terrain, and carpeted surfaces as compared to manual wheelchairs. When compared to standard power wheelchairs, PneuPAW is lighter and easier to transport which could make it possible for individual with disabilities go to work since lack of transportation is reported as one of the barriers for employment of people with disabilities. By demonstrating feasibility and utility of PneuPAW, this project may result in an entirely new type of drive system for wheelchair technology that has weight and usability advantages over electric systems.

Workers with Psychiatric Disabilities and Self-Employment Through Microenterprise

Laysha Ostrow, PhD
785 Quintana Road, Suite 219
Morro Bay, CA 93442
laysha@livelearninc.net
www.livelearninc.net/entrepreneurship

Principal Investigator: Laysha Ostrow, PhD
Public Contact: 213/373-3850

Project Number: 90SF0020
Start Date: September 30, 2016
Length: 12 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 16 $70,000

Abstract: This research project examines self-employment and microenterprise or “small business” ownership as a strategy to improve career and financial outcomes for individuals with psychiatric disabilities. Individuals who are labeled with mental disorders experience high rates of unemployment, discrimination, and lack of access to education and work opportunities. Recent innovations in health policy and technology can facilitate self-employment, and make this an opportune time to bring this topic to the forefront of attention as a policy solution. Despite many particular challenges faced by people with psychiatric disabilities in wage employment, self-employment can be a uniquely valuable option for improving career outcomes. The specific objectives of the study are: First, an environmental scan to explore improving career outcomes for individuals with psychiatric disabilities through self-employment by examining current employment policies and practices, vocational rehabilitation services, technologies and accommodations, and tailored business development opportunities. Second, a nationwide survey to identify the barriers that individuals with psychiatric disabilities have faced in wage employment and disability systems, and how they have overcome and capitalized on their passion and ability to contribute to social change and economic development through self-employment in a microenterprise.

The Refined Health Action Process Approach for
Physical Activity Self-Regulation in People with MS

Chung-Yi Chiu, PhD
1206 South Fourth Street
Champaign, IL 61820-6953
chiucy@illinois.edu

Principal Investigator: Chung-Yi Chiu, PhD
Public Contact: 217/244-6435

Project Number: 90SF0011
Start Date: September 30, 2015
Length: 12 months
NIDILRR Officer: Theresa San Agustin, MD
NIDILRR Funding: FY 15 $70,000; FY 16 (No-cost extension through 6/30/2017)

Abstract: This project evaluates an expanded and refined Health Action Process Approach (ReHAPA) model to promote physical activity (PA) for people with multiple sclerosis (MS). Physical activity (PA) has considerable benefits for people with MS, yet many persons with this immune-mediated disease of the central nervous system are physically inactive and sedentary. Recent evidence indicates that nearly 80% of people with MS are not meeting public health guidelines for moderate-to-vigorous PA, and PA levels further decrease over time in persons with relapsing-remitting MS. This information indicates that many people with MS are not benefiting from PA as a health promotion behavior, and accordingly may have increased risks of other comorbid conditions such as obesity, cardiovascular disease, and type-II diabetes. ReHAPA is a theory-driven motivational model of PA promotion for people with MS. The model includes seven latent variables: antecedents of motivation, barriers and facilitators, multiphasic self-efficacy, motivation, props of volition, self-regulation skills, and PA. The study will provide useful information on motivational and volitional factors influencing PA behaviors in people with MS and findings can be used to design an effective PA intervention for people with MS.
Creating a Multidimensional Model of Engagement for Young Adult with Psychiatric Disabilities in Adult System Team-Based Community Outreach and Support Services

Vanessa Vorhies Klodnick, PhD, LCSW
4101 North Ravenswood Avenue
Chicago, IL 60613-2193
v.v.klodnick@gmail.com

Principal Investigator: Vanessa Vorhies Klodnick, PhD, LCSW
Public Contact: 773/844-7380

Project Number: 90SF0008
Start Date: September 30, 2015
Length: 12 months

NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 15 $70,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: Evidence-based practices are needed that both engage and support young people with serious mental health conditions in tackling the many challenges the transition to adulthood poses. This project examines engagement processes of adult system team-based community outreach and support services aimed at supporting community integration and independent living among young adults with psychiatric disabilities. The specific aims of this study are to: (1) investigate how adult system team-based services aimed at supporting community integration and independence engage young adults; (2) explore how engagement is impacted by individual, family, and system level processes; (3) examine characteristics and patterns of “engagement” in team-based community outreach and support services through triangulation of data sources; and (4) develop a multidimensional definition of engagement and model explaining engagement specifically for young adults in team-based community outreach and support services.
Promoting Community-Based Physical Activity Early Post-Stroke: An Adaptation of the 14-Weeks to a Healthier You Program

Carmen E. Capo-Lugo, PhD
633 North Saint Clair Street, 20th Floor
Chicago, IL 60611-3234
carmen.capolugo@northwestern.edu

Principal Investigator: Carmen E. Capo-Lugo, PhD, PT
Public Contact: 312/503-3742

Project Number: 90SF0010
Start Date: September 30, 2015
Length: 12 months
NIDILRR Officer: Kenneth D. Wood, PhD
NIDILRR Funding: FY 15 $70,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: This project develops a patient-centered program that promotes the maintenance of healthy levels of community-based physical activity immediately after discharge from acute rehabilitation following stroke. Although mortality due to stroke is decreasing, stroke continues to be a leading cause of serious long-term disability. Stroke commonly causes mobility disabilities that impair daily physical activity and, in turn, physical inactivity is associated with a greater risk for stroke recurrence and the development of cardiovascular comorbidities. While rehabilitation can reduce disability caused by stroke, functional recovery is often halted once rehabilitation services stop. Hence, a particularly critical period is that which immediately follows rehabilitation discharge, in which individuals post-stroke must engage in sustained physical activity and long-term healthy behaviors in order to continue with their functional recovery and prevent stroke-related comorbidities. The specific aims of this project are to: (1) identify post-stroke facilitators and barriers to community-based physical activity by means of questionnaires and focus groups and (2) adapt the physical activity program, “14-Weeks to a Healthier You”, to enhance its patient-centeredness and address the needs of individuals post-stroke. The resulting stroke-adapted physical activity program could be used as a resource to bridge the end of rehabilitation with community-based physical activity.
Self-Generation of Prospective Memory in TBI

Erica Weber
Fifth Lawrence Street
Bloomfield, NJ 07003

**Principal Investigator:** Erica Weber
**Public Contact:** 617/645-3678

**Project Number:** 90SF0015
**Start Date:** September 30, 2016
**Length:** 12 months
**NIDILRR Officer:** Kenneth D. Wood, PhD
**NIDILRR Funding:** FY 16 $70,000

**Abstract:** This project evaluates the efficacy of self-generation to improve prospective memory (PM) in individuals with traumatic brain injury (TBI). PM is the ability to remember to perform an intended action at a specific point in the future (e.g., remembering to take prescribed medications on time). There is presently a lack of empirically-validated, theory-driven techniques to remediate PM deficits in TBI. One novel and potentially impactful approach to improving PM is self-generation, a process by which the individual must produce the material to be remembered. This project uses two approaches of increasing ecological validity (i.e., laboratory-based and naturalistic PM paradigms; translational “bench-to-bedside” approach). Additionally, this study explores relationships of self-generation PM benefit with relevant participant characteristics (e.g., neurocognitive performance, demographics, TBI severity) to clarify how and for whom this mechanism is most effective. These study aims are evaluated in 40 individuals with history of moderate-to-severe TBI, in the context of a larger neuropsychology and functional test battery. Results from this study are expected to directly inform future development of cognitive rehabilitation protocols in this population that will enhance daily functioning in those with disabilities.
Processing Speed Deficits in Multiple Sclerosis: Exploring the Complex Sensorial Cognitive Motor Interaction

Silvana Lopes Costa, PhD
333 River Street, Apt. 1016
Hoboken, NJ 07030
silvanalopescosta@gmail.com

**Principal Investigator:** Silvana Lopes Costa, PhD  
**Public Contact:** 973/204-1342

**Project Number:** 90SF0012  
**Start Date:** September 30, 2015  
**Length:** 12 months  
**NIDILRR Officer:** Kenneth D. Wood, PhD  
**NIDILRR Funding:** FY 15 $70,000; FY 16 (No-cost extension through 06/30/2017)

**Abstract:** This project examines the impact of sensorial, cognitive, and motor impairments on information processing speed (IPS) in individuals with multiple sclerosis (MS). Despite the prevalence and impact of sensorial, cognitive, and motor impairments in MS, the interactions between the three and their impact on IPS is poorly understood. This is critical given that in order to process information one needs to execute a series of basic processing steps that can be individually vulnerable to brain pathology. This project: (1) assesses the integrity of each of three functions (sensorial, cognitive, and motor) essential to process information efficiently (both accurately and temporally); examines the interaction between sensorial speed (temporal dynamics of visual processing), cognitive speed (attention, learning, and working memory), and motor speed (ocular-motor function and speech rate) on the execution of cognitive tasks often used in clinical and research settings as MS cognitive diagnostic tests (e.g. Symbol Digit Modalities Test); and tests the impact of deficits in these three information processing speed processes (sensorial, cognitive, and motor speed) on quality of life. The goal is to provide researchers and clinicians with more fine-graded diagnostic instruments that will most effectively identify IPS deficits in MS, with the potential to be extended to other neurological disorders. In addition, the results of this study will allow researchers to focus rehabilitation efforts on the source of the deficit.
Motivational Influences on Cognitive Fatigue in Individuals with Traumatic Brain Injury

Ekaterina Dobryakova  
Kessler Foundation  
Traumatic Brain Injury Research  
1199 Pleasant Valley Way  
West Orange, NJ 07052  
edobryakova@kesslerfoundation.org

Principal Investigator: Ekaterina Dobryakova, PhD  
Public Contact: 862/250-7323

Project Number: 90SF0009  
Start Date: September 30, 2015  
Length: 12 months  
NIDILRR Officer: Kenneth D. Wood, PhD  
NIDILRR Funding: FY 15 $70,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: This goal of this project is to identify whether motivation is a factor that impacts cognitive fatigue in individuals with traumatic brain injury (TBI) and if it can lead to the development of effective interventions that reduce cognitive fatigue and improve the quality of life in those with TBI. It has been suggested that cognitive fatigue is due to a disruption of the functioning of the fronto-striatal network, leading to an effort-reward imbalance. The striatum and the ventromedial prefrontal cortex play a vital role in effort calculation and reward valuation. This study investigates whether rewards associated with performing a task can modulate the expression of cognitive fatigue in individuals with TBI. Participants with and without TBI undergo functional MRI while performing a task that includes a reward and a no reward condition. During the reward condition, participants have a chance to receive a monetary reward, but not during the no reward condition, with fatigue ratings acquired at intervals during the scan. The study also examines functional and structural connectivity of the network to assess whether fatigue levels are related to the strength of functional and/or structural connectivity. Results are used to develop an intervention that involves self-motivation as a tool to cope with cognitive fatigue.
A Cultural Family Intervention after Brain Injury (CFIaBI) for African Americans

Kelli Williams Gary, PhD
730 East Broad Street
Richmond, VA 23298-0008

Principal Investigator: Kelli Williams Gary, PhD
Public Contact: 804/828-3412

Project Number: 90SF0014
Start Date: September 30, 2016
Length: 12 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 16 $70,000

Abstract: The goal of this study is to quantitatively identify and qualitatively describe barriers and facilitators that are culturally-based and that interfere with and enhance community integration (CI) and emotional well-being after a traumatic brain injury (TBI), resulting in the development of a cultural community-based TBI intervention for African-American families. Theoretical concepts from the Socio-Economic Model and input from a community advisory board provide the skeletal framework for development of the intervention. The project conducts mixed methods studies to determine content for a cultural family intervention that improves CI for African-Americans with TBI while also increasing emotional well-being for their caregivers, resulting in improved quality of life for both groups. Twelve African-American family dyads of individuals with TBI and their caregivers provide salient information for topic areas and input on content. Once developed, the intervention is tested for feasibility and effectiveness.
Pre-Employment Transition Services (PETS) for Young Adults with Disabilities

Washington State University
Cleveland Hall 358
PO Box 642114
Pullman, WA 99164
marcus.poppen@wsu.edu

Principal Investigator: Marcus Poppen, PhD
Public Contact: 509/335-6363

Project Number: 90SF0017
Start Date: September 30, 2016
Length: 12 months
NIDILRR Officer: Leslie J. Caplan, PhD
NIDILRR Funding: FY 16 $70,000

Abstract: This project addresses a gap in employment research and practice by: (a) exploring the relationships between Pre-Employment Transition Services (PETS) and rehabilitation outcomes through examining an existing data set that contains information on 4,443 young adults with disabilities who received and completed services from vocational rehabilitation (VR) programs in Oregon between 2003 and 2013, and (b) developing a new instrument to document and evaluate the coordination of the delivery of PETS in high schools. Despite national efforts, young adults with disabilities remain among the least represented demographic in the labor force. Disparities in employment outcomes persist throughout the lifespan of individuals with disabilities and reinforce the need to better understand and address the barriers that prevent positive employment outcomes for young adults with disabilities while they are still in school. Coordinating school-based transition services with VR is one strategy that has been shown to increase the odds of positive employment outcomes for young adults with disabilities; however, there is a need to understand more about why these practices are effective and develop instruments that will help to document and evaluate their implementation. This project addresses the need for such evidence, which has multiplied as a result of the reauthorization of the Workforce Investment and Opportunities Act of 2014 (WIOA) which mandates state VR agencies ensure the coordination and delivery of PETS to all potentially eligible students with disabilities in high school.

NIDILRR Funding: FY 11 $150,000; FY 12 $150,000; FY 13 $150,000; FY 14 $150,000; FY 15 $150,000; FY 16 (No-cost extension through 9/29/2017)

Abstract: The Advanced Rehabilitation Research Training at UC Davis (ARRT) provides core research methodology training, advanced research training, research experience, mentorship, and career development support for clinicians, allied health professionals, and post-doctoral students committed to developing productive careers in rehabilitation research. The aim of the ARRT is to produce rigorously-trained, extramurally-competitive, and scientifically-productive independent investigators or physician-scientists who improve the health outcomes, participation, and quality of life of individuals with disabilities. Over the course of five years, this ARRT trains 10 postdoctoral or physician trainees in a two-year comprehensive program to develop specialized and multidisciplinary research skills. The focus of the research training is a mentored period of hypothesis-driven clinical research in areas related to the rehabilitation of individuals with neuromuscular diseases or neurodevelopmental disorders. The training provides core research competency in the following areas: (1) rehabilitation concepts and research methodology, (2) clinical epidemiology and study design, (3) methods in clinical research, (4) strategies for writing grants and publications, (5) health informatics, (6) medical statistics, and (7) responsible conduct of research. Advanced coursework and clinical training in neuromuscular diseases and neurodevelopmental disorders completes the didactic coursework. Each trainee is required to develop his/her own research project and grant proposal, author a scientific publication, and present findings at professional meetings and conferences. Rigorous and periodic assessment of the individual trainee’s progress, as well as a periodic evaluation of the training program, ensure the development of successful research training providing a research foundation that cultivates continual mentorship and provides multidisciplinary research opportunities for trainees to engage in productive careers that benefit the lives of individuals with neuromuscular and neurodevelopmental disorders.

NIDILRR Officer: Thomas Corfman
NIDILRR Funding: FY 13 $150,000; FY 14 $150,000; FY 15 $150,000; FY 16 $150,000; FY 17 $150,000

Abstract: This project partners with the Veterans Health Administration to train postdoctoral fellows in conducting high-quality, multidisciplinary disability policy research in the area of community living and participation for veterans with disabilities. This project collaborates with a two-site Center of Innovation for Disability and Rehabilitation Research (CINDRR) to bring opportunities to the project fellows through immediate experience in ongoing disability policy-related projects focused on veterans with disabilities. Through the training program, the project (1) increases capacity in the field by providing postdoctoral training in disability policy research to six postdoctoral fellows, including at least one fellow from a minority or underserved population; (2) conducts disability policy research, which results in fellow participation in 10 collaborative research projects, 10 conference presentations, 10 research grant proposals, and 10 peer-reviewed publications; and (3) advances each postdoctoral fellow to the next stage in their research career through career development support. Dissemination activities include a Disability and Rehabilitation Policy Seminar, planned and implemented by fellows, which provides practical experience in establishing a network for research dissemination.

Project Number: 90AR5007 (Formerly H133P110004)
Start Date: October 01, 2011
Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 11 $149,988; FY 12 $149,989; FY 13 $149,826; FY 14 $149,978; FY 15 $149,987; FY 16 (No-cost extension through 9/29/2017)

Abstract: The University of Illinois at Chicago provides an intensive, interdisciplinary postdoctoral training program that actively engages scholars in research designed to improve the health, employment, and community engagement and participation outcomes for persons with disabilities. This advanced training program focuses on sub-populations of persons with disabilities who are most likely to encounter the greatest number of barriers in community life: minorities, persons with intellectual and developmental disabilities, persons with severe physical disabilities, and older adults. The training program emphasizes preparing scholars to conduct research that has real-world impact (i.e., guiding and changing services, programs, organizations, and policies that influence the lives of persons with disabilities). Areas of emphasis include: (1) translational scholarship that uses empirical knowledge to develop, refine, and test optimal services and environmental strategies to support these outcomes; and (2) transformational scholarship that employs participatory methodologies that involve stakeholders in the research process and directly improve services, programs, organizations, and policies. The postdoctoral training program recruits and enrolls seven highly qualified postdoctoral fellows from a variety of disciplines. Particular effort is made to recruit postdoctoral trainees with disabilities as well as those from ethnically diverse backgrounds. Each trainee completes an intensive advanced-training program (average of two years) designed to assure acquisition of key skills critical to successful research careers. The training program includes: (1) didactic preparation, (2) close mentoring by highly qualified researchers, (3) immersion in ongoing research, and (4) field placement in carefully selected programs or organizations that serve the target populations. Each trainee’s program is individually designed to assure that the trainee has access to the most rigorous and relevant concepts and research methodologies for his/her chosen focus (health promotion, employment, and/or community engagement and participation). The project monitors and assures high-quality training, and supports trainees to develop capacity to enter productive research careers that directly improve services, programs, policies, and societal attitudes toward people with disabilities.

Abstract: The goal of this program is to increase the number of postdoctoral engineers and scientists trained to perform research aimed at solving problems of persons with disabilities. To meet this objective, special attention is given to the following areas of expertise: neurologic disorders, musculoskeletal injuries, biomechanics, and prosthetics and orthotics. Targeted technical and scientific training is provided by faculty with relevant technical expertise in multiple departments at Northwestern University. This training is coordinated with intensive clinical and scientific instruction, and experience provided by faculty with relevant clinical expertise in multiple departments of the university. Postdoctoral trainees also receive training and develop experience in community-based settings. Postdoctoral trainees are recruited using regional and national advertising in appropriate engineering and scientific publications, and via appropriate web advertising and email list-servers. With the help of national organizations dedicated to improving minority participation in science, minority scientists/engineers are recruited to participate in the training programs. Similar efforts are made to attract scientists and engineers with disabilities.

Abstract: This training program targets individuals with advanced degrees in communication sciences and disorders and related fields, and engages them in rehabilitation research activities designed to address the communication needs of persons with disabilities. The program is structured to provide two years of intensive training to four post-doctoral fellows who are committed to a career in rehabilitation research. Fellows are supervised by a team of multidisciplinary mentors in a comprehensive program that has three major components: (1) didactic training; (2) a mentored clinical experience in stroke, traumatic brain injury (TBI), Parkinson’s disease, or other neurological disorder; and (3) immersion in a research practicum. The research practicum includes participation in ongoing research projects, and development and implementation of an independent research project. The capstone experience is the preparation and submission of a competitive grant application to an extramural funding agency.

Abstract: The University of Maryland Advanced Neuromotor Rehabilitation Training (UMANRRT) program trains post-doctoral fellows in interdisciplinary rehabilitation research with a primary focus on neuromuscular disorders including Parkinson’s disease and stroke. The UMANRRT program targets doctorally prepared professionals with backgrounds in bioengineering, physical therapy, occupational therapy, and the movement sciences. The overall goal of the UMANRRT program is training post-doctoral fellows to further develop and refine the skills needed to conduct high-quality, independent, interdisciplinary, funded research in the rehabilitation of clinical populations with neuromotor disorders. Specific project objectives include: (1) recruiting and selecting highly qualified candidates to become UMANRRT post-doctoral fellows; (2) providing a scientifically-based, multidisciplinary training program that includes collaboration among affiliated institutions; (3) providing mentoring and collaborative opportunities with established researchers at University of Maryland at Baltimore and affiliated institutions; (4) providing fellows with interdisciplinary neuromotor rehabilitation research leadership experience by involving them in research projects where at least one is led by the fellow; (5) providing opportunities for participation in presentations, publications, and grant development; and (6) providing opportunities to develop teaching and mentoring skills for transitioning to a junior faculty role.

Abstract: This project addresses a gap in medical rehabilitation residency programs, rehabilitation therapists training programs, and PhD programs in rehabilitation sciences in providing optimal training and mentoring in outcome measurement theory and methodology. This post-doctoral fellowship training program helps rehabilitation researchers develop and refine the contemporary outcomes measurement skills they will need to conduct high quality, independent rehabilitation research. Participating fellows obtain advanced knowledge in contemporary measurement theory and methodology, advanced research design, and statistical methods; work as part of a sophisticated research team and under direct supervision from an experienced research mentor; write scientific abstracts, presentations, and publications; develop skills in the responsible conduct of research and working with consumers; obtain experience in developing and presenting scientific presentations; and develop skills in writing research grant applications.

Abstract: This advanced rehabilitation research training project (ARRT) trains six post-doctoral fellows through a two-year training program in the area of psychiatric vocational rehabilitation. The training program is implemented in two consecutive cycles with three fellows in residence and is designed to provide broad-based, didactic training in psychiatric vocational rehabilitation and employment research, which is complemented with an intensive research practicum that combines mentored and independent research in one of the following specializations of employment-related research: vocational recovery research, interventional research, vocational rehabilitation policy and systems research, or transition-age and young adults. Throughout the program, the fellows are mentored, actively and intensely, by accomplished scholars, through a variety of modalities which allow them to acquire competencies in the following areas: research design/methodology; advanced statistics and instrument development; psychiatric vocational rehabilitation and employment research; participatory research methods and peer employment research; conduct of applied research; and grant and professional writing.

NIDILRR Funding: FY 15 $149,998; FY 16 $149,996; FY 17 $150,000; FY 18 $149,999; FY 19 $149,999

Abstract: This project trains six postdoctoral fellows, recruited from racial, ethnic, and/or disability minority backgrounds, who are interested in research careers. The overarching focus of this program is racial, ethnic, and disability-based health disparities among children and adults with disabilities. Each postdoctoral fellow receives training driven by an individual development plan, modeled on that created by the National Science Foundation. Project participants conduct a self-assessment, and with the guidance of a primary mentor from Brandeis University and two secondary mentors from institutions in greater Boston, develop an individual development plan. They then embark on a training and professional development program that includes (1) biweekly meetings with the primary mentor; (2) applied research experience on a funded research project of the primary mentor; (3) support and guidance from quarterly meetings with two secondary mentors; (4) coursework in advanced research methods, health services research, and disability from any of the 11 Boston Consortium universities (including Boston University, MIT, Boston College, Tufts, and Brandeis University); (5) participation in a biweekly postdoc seminar which will address fellows’ professional development; (6) mentored research on independent projects of the fellows’ choosing; and (7) advice, guidance, and community learning activities from the disability community represented by a Community Advisory Board. Through the course of this program, postdoctoral fellows author or coauthor six papers for peer-reviewed journal articles; attend at least four national scientific conferences; develop and submit one extramural grant proposal as principal investigator; and present their research findings in the disability community four times. Project mentors are drawn from the fields of disability studies, education, medicine, occupational therapy, public health, social policy, social work, and sociology. The project is overseen by a Community Advisory Board of individuals involved in the disability field in different ways, including self-advocates, clinicians, nonprofit executives, and community leaders.

Project Number: 90AR5020 (Formerly H133P140005)
Start Date: October 01, 2014
Length: 60 months
NIDILRR Officer: Dawn Carlson, PhD, MPH
NIDILRR Funding: FY 14 $150,000; FY 15 $150,000; FY 16 $150,000; FY 17 $150,000; FY 18 $150,000

Abstract: The ARRTP-CP trains six postdoctoral fellows and up to five physician resident trainees to advance the rehabilitation field in community living and participation, promoted by embracing community-based research approaches. This training program is guided by the principles of competency-based education and assessment to develop individualized training plans and the achievement of core competencies. The overall objectives of the ARRTP-CP are to: (1) provide research training in community living and participation in persons with disabilities; (2) orient training toward advancement of rehabilitation science by promoting community-based research that enables the development of sound disability policy; (3) prepare researchers to conduct studies in community-based settings, including home, school, and other environments; (4) foster advanced research skills that result in successful research proposals addressing issues relevant to persons with disabilities; and (5) build productive partnerships and collaborations that lead to successful careers to address the critical shortage of qualified rehabilitation scientists. Training in research methods focuses on diverse community-based research approaches designed to capture community living and environmental, social, and situational contextual factors. A core curriculum complements hands-on experience, and includes academic courses, seminars, and workshops to train fellows in qualitative methods (i.e. community-based participatory research - CBPR) supported by quantitative ones. Opportunities to complete a CBPR project, attend presentations and lectures at partner institutions and national conferences, and engage in networking round out the training program. This program is a collaborative effort among academic researchers at the University of Michigan’s School of Public Health, Institute of Social Research, and the Department of Physical Medicine and Rehabilitation and their partners at community-based organizations.

Project Number: 90AR5014 (Formerly H133P120011)
Start Date: October 01, 2012
Length: 60 months
NIDILRR Officer: A. Cate Miller, PhD
NIDILRR Funding: FY 12 $149,994; FY 13 $149,866; FY 14 $149,995; FY 15 $149,993; FY 16 $149,998

Abstract: This project trains postdoctoral fellows in skills necessary to become independent investigators in clinical rehabilitation research. Doctoral-level professionals from appropriate psychology fields of study (e.g., rehabilitation, clinical, counseling, and health psychology and neuropsychology) receive training through mentored independent research projects (IRPs) and ongoing multidisciplinary collaborative research projects. In addition to expanding their research expertise, fellows increase their knowledge of participatory action research (PAR) through collaborations with consumer disability advocacy groups, PAR-focused seminars, and/or partnership with a consumer whose disability is the focus of the fellow’s IRP. By completion of training, fellows are expected to complete a minimum of one IRP, participate on a minimum of one ongoing collaborative research project, present research results to professional and consumer groups and/or submit findings for publication in peer-reviewed journals, and participate in writing extramural grant proposals, including their own grant applications.

Abstract: The goal of this program is to improve the capacity of minority-serving institutions (MSI) to develop and support disability and rehabilitation training pipeline infrastructure that can facilitate the development of talent and produce qualified investigators of color who can lead and participate in research and development aimed at improving the employment status of individuals with disabilities from traditionally underserved racial and ethnic populations. To this end, the ARRT objectives are to: (1) implement a recruitment strategy that will attract four to six well-qualified MSI-based fellows, including individuals with disabilities, interested in pursuing research careers in the rehabilitation of individuals with disabilities for advanced research training; (2) provide fellows with a multidisciplinary training program that includes didactic research coursework and classroom instruction offered through alternative technological platforms (including online) that will increase their knowledge of scientific research methodologies, multicultural research best-practices, and solutions-focused translational approaches suitable to the field of rehabilitation; (3) implement mentoring through an interface between fellows and a peer-to-peer multiple mentor approach that consists of a primary mentor and a scientific mentorship panel comprised of context experts, multicultural specialists, methodologists, and a statistician from the LU-RRTC, Institute on Community Inclusion at the University of Massachusetts Boston (an Asian American and Native American Pacific Islander-serving institution), North Carolina Agricultural and Technical State University (an historically Black college/university or HBCU), South Carolina State University (HBCU), and Jackson State University (HBCU); (4) increase fellows’ scientific writing abilities by having them collaborate with researchers on grant writing and preparation of independent research findings for submission to peer-reviewed journals; (5) improve fellows’ presentation abilities to both professionals and consumers; (6) provide fellows with interdisciplinary research experiences; and (7) involve fellows in consumer-related experiences by providing opportunities to deliver clinical em-
ployment support interventions and/or participate in structured community-based settings with organizations representing individuals with disabilities such as Oklahoma Department of Rehabilitation Services, Goodwill Industries of Central Oklahoma, and Oklahoma City Public School District-Department of Special Education.

NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $149,991; FY 15 $149,993; FY 16 $150,000; FY 17 $149,966; FY 18 $149,997

Abstract: Career Advancement for Engineers in the Science of Rehabilitation (CAESOR) provides integrated engineering and clinical training for up to seven postdoctoral fellows, fostering a deep understanding of human function and needs, enabling them to design innovative rehabilitation devices, tools, and techniques to help people with disabilities and older adults live more satisfying and productive lives. CAESOR utilizes a rehabilitation research team consisting of a focused cadre of mentors with interdisciplinary expertise in engineering, clinical, and psychosocial disciplines to provide the trainees with a balanced exposure to research, clinical, and academic approaches to rehabilitation and disability issues. The program is specifically designed to give the postdoctoral trainees the skills needed to become independent researchers in rehabilitation engineering. The comprehensive training activities are designed to facilitate the development of skills and competencies in six key areas including technical, person-centered (clinical and psychosocial), research, communication, innovation, and leadership skills. The training program consists of five components, with each component addressing one or more of the six key skills: (1) immersion in a mentored rehabilitation research experience by matching postdoctoral trainees with highly successful research mentors; (2) complementary didactics including core and individualized components that teach and enhance the critical skills necessary for a successful research career (such as grant writing, ethics, and issues in human subject research), and topics that are not usually covered in traditional engineering curricula (such as medical and social aspects of disability, research methods, and statistical analysis); (3) involvement in mentored clinical experience to gain clinical insights into and better understanding of the clinical decision-making process; (4) structured professional development and networking activities; and (5) participation in a community practicum to understand the real user needs and contextual constraints of technology. The capstone experience for the postdoctoral trainees is the submission of an extramural research proposal.

Abstract: This project provides a multidisciplinary, doctoral-level rehabilitation research training in traumatic brain injury (TBI) that teaches six postdoctoral fellows techniques in rehabilitation counseling, speech-language pathology, public health, sports medicines, clinical laboratory sciences, diagnostic imaging, computer science, and kinesiology. The project (1) provides a multidisciplinary training program that emphasizes advanced research methodology, participatory in the initiation and carrying out of advanced research projects; (2) provides a clinical research experience utilizing both group designs and single-subject designs to further develop research skills in the rehabilitation of persons with TBI; (3) provides advanced research experience in a community-based research setting and community outreach to organizations serving individuals with TBI; (4) provides advanced research mentoring and opportunities for scientific collaboration with researchers in Kinesiology Vestibular Lab, Clinical Laboratory Science Lab, Public Health Sciences, Computer Modeling Lab, Sports Medicine Clinic, Concussion Management Research Lab, and the Department of Emergency Medicine at the Texas Tech University Medical School in El Paso; and (5) provides trainees with opportunities to publish findings and present papers in national, regional, local, and university outlets. The project’s training program leads postdoctoral researchers toward receiving the Certificate of Concussion Management.

NIDILRR Officer: Hugh Berry, EdD
NIDILRR Funding: FY 11 $149,999; FY 12 $149,999; FY 13 $149,999; FY 14 $149,999; FY 15 $149,999; FY 16 (No-cost extension through 9/29/2017)

Abstract: The Interdisciplinary Rehabilitation Research Training Program provides postdoctoral research opportunities to qualified individuals interested in academic and clinical careers related to disability, rehabilitation, and recovery. Postdoctoral fellows plan, conduct, and disseminate research involving rehabilitation outcomes with a focus on older persons with disabilities and chronic disease. The research is accomplished in collaboration with an interdisciplinary team focusing in one of the following areas: muscle biology of rehabilitation, clinical and community rehabilitation, and population-based health services rehabilitation. Each postdoctoral fellow identifies a primary mentor who is a member of one of three research teams, and has an established research program and a record of external funding. The trainee and mentor develop an individualized career development plan. The plan includes a core curriculum of formal (credit bearing) and informal learning experiences, seminars, and workshops that are completed by all the fellows. The career development plan includes a series of learning activities directly related to the trainees’ area of research focus. Outcomes include published research studies, presentations at national scientific meetings, submission of grant proposals, training in methods of dissemination, and participation in interdisciplinary research networks. The activities of each postdoctoral fellow are monitored by the primary mentor and members of the research team. All trainees complete a community-based practicum experience that includes structured opportunities to interact with health care providers and consumers in a community context. Fellows also have the opportunity to earn a Master’s degree in Public Health as part of the postdoctoral training program. Finally, the fellows are assisted by program faculty in identifying and securing professional positions providing the opportunity to conduct and disseminate the results of research advancing rehabilitation science and evidence-based practice.

Abstract: This project implements a highly effective advanced rehabilitation research training program (ARRT) for individuals with advanced degrees, committed to a career in rehabilitation research, with a focus on neurobehavioral recovery and intervention. Training and research activities address brain injury and other neurological disorders including Parkinson’s, stroke, and brain tumors. The program trains a diverse group of fellows, including persons with disabilities. Individualized research training plans emphasizing scientific rigor guide fellows’ choices of training activities. Multidisciplinary mentors, didactic experiences, and collaborative and independent research activities provide the foundation for the VCU ARRT program. Mentors include scientists from the fields of rehabilitation medicine, neuropsychology, neurosurgery, and vocational rehabilitation. Core courses on ethics, biostatistics, research design, and grant writing are complemented by graduate courses, seminars, grand rounds, and conferences. All fellows complete and submit a grant application during the second year of their fellowship. The ultimate goal of the VCU ARRT is to benefit rehabilitation practice and outcomes by increasing the number of highly skilled clinical research professionals.

NIDILRR Funding: FY 12 $149,997; FY 13 $147,559; FY 14 $149,999; FY 15 $149,999; FY 16 $149,998

Abstract: This ARRT program provides unique opportunities for rehabilitation researchers to acquire and apply modern psychometric techniques and for researchers trained in modern psychometric theory to develop expertise in rehabilitation and physical medicine. Postdoctoral trainees receive two years of advanced training that includes: (1) immersion in a mentored rehabilitation research experience, matching postdoctoral trainees with highly successful rehabilitation researchers; and (2) complementary didactics (core and individualized) to support trainee development. The overall goal of this project is to advance research capacity in rehabilitation research by providing researchers with training and mentoring opportunities that facilitate better outcomes measurement in rehabilitation research. Researchers with training in both rehabilitation and outcomes measurement are best positioned to develop, test, and evaluate psychometrically sound and clinically meaningful outcomes, translate research into practice, identify gaps in evidence that most affect people with disabilities, examine the prognostic information available to patients and providers, and examine behaviors, lifestyles, and choices within people’s control that may affect their health outcomes.

Start Date: September 30, 2015
Length: 60 months
NIDILRR Officer: Sarah Ruiz, PhD
NIDILRR Funding: FY 15 $79,103; FY 16 $148,677; FY 17 $148,935; FY 18 $149,203; FY 19 $81,242

Abstract: This project implements a five-year Advanced Rehabilitation Research Policy Fellowship (UW-ARRT-RP) for postdoctoral rehabilitation professionals. Through a collaborative partnership between the University of Washington and the Health and Aging Policy Fellows Program, administered by Columbia University, the primary goal is to increase the number of successful independent rehabilitation policy researchers who are prepared to conduct investigations related to healthcare policy in individuals with disabilities across the lifespan, with an emphasis on older adults. The program provides advanced training for four postdoctoral trainees, in two phases. The first year immerses fellows in a mentored rehabilitation research experience at UW, matching trainees with researchers in disability and rehabilitation. All trainees complete an individualized research development plan, as well as formal coursework in policy research. In year 2, fellows move into the policy intensive portion of the program, by participating in the residential track of the Health and Aging Policy Fellows Program in Washington, DC, working inside the Federal policymaking and policy-related research process as legislative assistants in Congress, or as professional staff members in executive-branch agencies or policy organizations. Both years of training include core and individualized didactics and coursework, as well as workshops and integrated mentorship. Fellows also complete a mentored policy research project, culminating in a presentation of findings at the end of Year 2. The UW-ARRT-RP also conducts ongoing formal evaluation of all aspects of the program.

Length: 60 months
NIDILRR Officer: Stephen Bauer, PhD
NIDILRR Funding: FY 14 $150,000; FY 15 $150,000; FY 16 $150,000; FY 17 $150,000; FY 18 $150,000

Abstract: This project offers advanced education and training in rehabilitation research to selected engineers and physician researchers in four areas that support opportunities for career-oriented contributions to the field of pediatric mobility: (1) musculoskeletal biomechanics and biomaterials, (2) assistive devices and robotics, (3) foot and ankle mobility, and (4) functional assessment/outcomes measurement. A team of two senior mentors and a physician/surgeon with qualifications specific to each of these research areas support candidates entering the program to enhance their current skills and offer additional, high-level training and experience. The postdoctoral trainees experience a program designed to provide a unique set of capabilities to succeed as a rehabilitation researcher. The program includes three essential elements: didactics, mentored research areas, and collegial and collaborative activities. Fellowship research requirements include the successful submission of an intramural proposal, pilot study completion and refinement, multiple journal article submissions, and submission of extramural proposals. The fellowship experience also includes an ‘away’ rotation at one of several research support laboratories including: the Lawrence Berkeley National Laboratory (CA), the UC Berkeley Department of Materials Science and Engineering (CA), the Hospital for Special Surgery Motion Analysis Laboratory (NY), the Thomas Jefferson University School of Health Professions (PA), and the Northwestern University Biodynamics Laboratory (IL). The fellowship also provides an international clinical rotation through videoconference with our colleagues in the Motion Analysis Laboratory at ITESM, Chihuahua, Mexico. Optional off-site rotations are also available through facilities in Cali, Columbia and Manila, Philippines.

- Rehabilitation Engineering Research Center on Technologies to Support Successful Aging with Disability (RERC TechSAge) ..................................................5-7
- Safe@Home: A Self-Management Program for Individuals with Traumatic Brain Injury and Their Families ..................................................2-25
- Southeast ADA National Network Regional Center - Region IV ..................................7-6
- Southeast Regional Spinal Cord Injury Model System (SR-SCIMS) ..............................3-33
- Southeast Regional Spinal Cord Injury Model System at Shepherd Center ......................3-32
- Virtual Home Modifications Education Assistant (VHMEA) for Educators, Students, and Consumers ..................................................5-30

### Illinois

- Advanced Rehabilitation Research Training: Interventions for Neurologic Communication Disorders ..................................................8-21
- Advanced Training in Translational and Engaged-Scholarship to Improve Community Living and Participation of People with Disabilities ........................................8-23
- Advanced Training in Translational and Transformational Research to Improve Outcomes for People with Disabilities .................8-19
- Creating a Multidimensional Model of Engagement for Young Adult with Psychiatric Disabilities in Adult System Team-Based Community Outreach and Support Services ........................................8-9
- Development of a Wearable Robot for Motor Rehabilitation in Acute Stroke ...................3-93
- Great Lakes ADA National Network Regional Center - Region V ...............................7-9
- Great Lakes ADA National Network Regional Center - Region V ...............................7-10
- Interpreting COPD Dyspnea Change: Sensitivity, Responsive, and Predictive Validity of the DMQ-CAT ........................................3-73
Machines Assisting Recovery from Stroke and Spinal Cord Injury for Reintegration into Society (MARS3) ..................................................5-10
Midwest Regional Spinal Cord Injury Care System (MRSCIS).................................................................3-34
Midwest Regional Spinal Cord Injury Model System (MRSCIS).................................................................3-35
Motivational Interviewing and Physical Activity Change in Parkinson's Disease ........3-74
Northwestern University Advanced Rehabilitation Research Training (ARRT) Program ..............................................8-22
Parents Taking Action: A Parent Training Intervention for Latino Immigrant Families ....................2-26
PRIDE (Partners of Refugees in Illinois Disability Employment).................................................................1-29
Promoting Community-Based Physical Activity Early Post-Stroke: An Adaptation of the 14-Weeks to a Healthier You Program ......8-10
Rehabilitation Engineering Research Center on Timing Investigation Dosage Implementation (TIDI) ....................5-11
Rehabilitation Research and Training Center (RRTC) on Family Support ...............................................2-4
Rehabilitation Research and Training Center on Developmental Disabilities and Health ......................3-4
Rehabilitation Research and Training Center on Self-Directed Recovery and Integrated Health Care .................................................3-6
Rehabilitation Sciences for Engineers and Basic Scientists: An Advanced Training Program ..........................8-20
Rehabilitation Sciences for Engineers and Basic Scientists: An Advanced Training Program .................8-24
Robot-Aided Diagnosis, Passive-Active Arm Motor and Sensory Rehabilitation Post Stroke ........................3-15
RRRTC on Developing Optimal Strategies in Exercise and Survival Skills to Increase Health and Function ........................................3-5
RRRTC on Psychiatric Disability and Co-Occurring Medical Conditions .................................................3-3
Technologies to Evaluate and Advance Mobility and Manipulation (TEAMM) Rehabilitation Engineering Research Center ...5-12
The Refined Health Action Process Approach for Physical Activity Self-Regulation in People with MS .......................8-8
Weight Management and Wellness for People with Psychiatric Disabilities ...........................................3-75

Indiana
Brain Research in Aggression and Irritability Network (BRAIN): Building Evidence-Based Approaches to Managing Traumatic Brain Injury ........................................3-54
Evaluating the Impact of a School-to-Work Collaborative on the Employment Outcomes of Transition-Aged Youth ......................................................1-15
Examining Determinants of Negative Attribution Bias in People with Traumatic Brain Injury .................................3-76
HomePortal – A Universal Home Environment for Individuals who are Blind or Have Visual Impairments ..........5-55
memBRAIN: A Non-Invasive Safety Net that Safeguards Young Adults with Autism Transitioning to Independent Living .................................................2-45
WhenWear Advisor: A Cloud-Based Tool to Help Supervisors Increase Employment Options for Workers with Intellectual Disabilities ........................................5-49

Kansas
Access to Success: Replication and Impact of a Training Program Supporting Post-Secondary Students in Requesting Disability Accommodations ...........................................2-27
Assessing Family Employment Awareness Training (FEAT) .................................................................1-30
Development and Evaluation of the Online and Applied System for Intervention Skills ....2-47
I-CONNECT PLUS: Enhancing Community Participation for Adolescents and Adults with ASD Using Online Instruction, Coaching, and Accessible Self-Management Technologies ................................2-17
Online and Applied Systems for Intervention Skills (OASIS) Parent Training Program: Translating Research to Practice ..........................2-18
Rehabilitation Research and Training Center on Community Living ............................................. 2-5
Rehabilitation Research and Training Center on Promoting Interventions for Community Living (RRTC/PICL) .......................................................... 2-6

**Louisiana**
Cooperative Learning and Individualized Mentoring to Build Self-Efficacy, Persistence, and Goal Attainment in Postsecondary African American Students ........................................ 2-28

**Maryland**
A Comparison of Reactive and Voluntary Lateral Step Training to Improve Balance and Reduce Falls in Person Post-Stroke ........................................ 8-4
Mid-Atlantic ADA National Network Regional Center - Region III ........................................ 7-5
National Rehabilitation Information Center (NARIC) ............................................................... 6-22
RRTC on VR Practices for Youth and Young Adults ................................................................. 1-3
Take Charge of Burn Pain: A Randomized Controlled Trial of a Web-Based Self-Management Intervention to Improve Burn Pain Outcomes ................................................................. 3-77
University of Maryland Advanced Neuromotor Rehabilitation Research Training (UMANRRT) .......................................................................................... 8-25

**Massachusetts**
Advanced Rehabilitation Research Training Program on Health and Functioning of People with Disabilities ................................................................. 8-28
Advanced Research Training Program in Employment and Vocational Rehabilitation of Persons with Psychiatric Disabilities ........................................ 8-27
Barriers and Unmet Needs for Reproductive Health Care Experienced by Women with Early Onset Mobility Impairments ......................................................... 8-5
Boston-Harvard Burn Injury Model System ................................................................. 3-22
Community-Based Non-Work: Developing Research-Based Guidance for States and Service Providers ................................................................. 2-30
Enhancing ACTivity and Participation for Persons with Arthritis (ENACT) ........................................ 2-7
Enhancing the Community Living and Participation of Individuals with Psychiatric Disabilities ................................................................. 2-20
Evaluation of "Project TEAM (Teens making Environmental and Activity Modifications)" : Effectiveness, Social Validity, and Feasibility ................................................................. 2-29
Increasing Community Participation Among Adults with Psychiatric Disabilities Through Intentional Peer Support ......................................................... 2-32
Integrated Scaling Approach: A Model for Large Scale Implementation of Effective Interventions for Employment ......................................................... 1-16
Measurement of Community Participation Using a Computer Adaptive Test (CAT) in Persons with Burn Injuries (PWB) .............................................. 2-19
NERSCIC: Improving the Lives of People with SCI Across the Lifespan Through Innovative Science and Technology ............................................. 3-36
New England ADA National Network Regional Center - Region I ........................................ 7-3
Parents Empowering Parents: National Research Center for Parents with Disabilities and their Families ................................................................. 2-21
Post-Doctoral Training in Rehabilitation Outcomes Measurement Research ........................................ 8-26
Recovery 4 US - Development of a Photovoice-Based Social Media Program to Enhance the Community Participation and Recovery of Individuals with Psychiatric Disabilities ................................................................. 2-31
Rehabilitation Research and Training Center on Advancing Employment for Individuals with Intellectual and Developmental Disabilities ............................................. 1-5
Rehabilitation Research and Training Center on Improving Employment Outcomes for Individuals with Psychiatric Disabilities ............................................. 1-6
SoundFit Ultrasonic Performance Diagnostic for Lower-Body Prostheses ........................................ 5-50
Spaulding Hospital-New England Regional Spinal Cord Injury Center ........................................ 3-39
Spaulding-Harvard Spinal Cord Injury Model System ................................................................. 3-38
Spaulding-Harvard Traumatic Brain Injury Model System ................................................................. 3-55
TEST - Translating Evidence to Support Transitions: Improving Outcomes of Youth in Transition with Psychiatric Disabilities by Use and Adoption of Best Practice Transition Planning ........................................6-6
The Intelligent Brace: A Compliance Monitoring System for Scoliosis ...............5-56
The Learning and Working During the Transition to Adulthood Rehabilitation Research and Training Center ......................1-7
Therapeutic Intermittent Compression Socket ...............................................................5-57
Vocational Rehabilitation and Developing Strategies to Meet Employer Needs in Changing Economic Environments ..........1-4

Michigan
Effect of Guidance Surfaces on Travelers with Vision and Mobility Impairments ..........5-34
Investigating Performance Indicators in Accessible and Inclusive Public Transportation ..........................................................5-32
Prevention of Long-Term Consequences of Mild Traumatic Brain Injury .................3-80
Targeting Sedentary Behavior Reduction in Adults with Cerebral Palsy Using a Real-Time Behavioral Intervention .................3-79
Technology Increasing Knowledge: Technology Optimizing Choice (TIKTOC) Rehabilitation Engineering Research Center (RERC) .........................................................5-13
The Menopause Transition in Women with Traumatic Brain Injury .........................3-78
The University of Michigan Advanced Rehabilitation Research Training Program in Community Living and Participation .............8-29
University of Michigan Spinal Cord Injury Model System ........................................3-40
Visual Gaze and Validity of Cognitive Evaluations ..................................................5-33

Minnesota
Anxiety Coach for Children: A Tool to Increase Community and Educational Participation .............................................2-46
Evaluating the Effectiveness of CareProfiler Post-Hire System for Staff Supporting People with Disabilities and Age-Related Needs: Cluster Randomized Trial ...............................1-31
Mayo Clinic Traumatic Brain Injury Model System ........................................................................3-56
National Core Indicators: Advance Exploration of Factors Affecting Quality of Life Outcomes of Adults with Intellectual Disabilities ..............................................2-33
Rehabilitation Research and Training Center on Home and Community Based Services Outcomes Measurement .................................................2-10
Research and Training Center on Community Living for People with Intellectual Disabilities .................................................2-9
Wheelchair Optimal Route Planning for Public Urban and Indoor Spaces ..................5-58

Mississippi
Employment for Individuals with Blindness or Other Visual Impairments ..................1-8

Missouri
Great Plains ADA National Network Regional Center - Region VII .....................7-14

Montana
Effort Capacity and Choice: Investigating a Dynamic Model of Participation ...........2-35
Motivating Self-Management Through Multi-Media Health Promotion ..................3-16
Partnering with People with Intellectual Disabilities to Address Violence ................2-34
Rehabilitation Research and Training Center on Disability in Rural Communities ........2-11

New Hampshire
Development Center to Enhance Evidence-Based Supportive Employment with a Technology-Based Management System ..................................................1-17
Rehabilitation Research and Training Center on Disability Statistics and Demographics (StatsRRTC) ........................................4-3
Rehabilitation Research and Training Center on Employment Policy and Measurement ......1-10
WorkingWell: Developing a Mobile Employment Support Tool for Individuals with Psychiatric Disabilities ......5-35

New Jersey
Evaluating the Impact of Employment Services in Supportive Housing ..............1-33
Improving Quality of Personal Care Assistance Services for People with SCI Through Online Education ..................3-82
Manual and Training Program to Promote Career Development Among Transition Age Youth and Young Adults with Psychiatric Conditions .....................1-18
Motivational Influences on Cognitive Fatigue in Individuals with Traumatic Brain Injury ........................................8-13
Northern New Jersey Spinal Cord Injury System ..................................................3-41
Northern New Jersey Spinal Cord Injury System ..................................................3-42
Northern New Jersey Traumatic Brain Injury System (NNJTBIS) .....................3-57
Patient-Specific In-Shoe Orthoses for Knee OA Prescribed Using Weight Bearing MRI .........................................................5-37
Processing Speed Deficits in Multiple Sclerosis: Exploring the Complex Sensorial Cognitive Motor Interaction .........................8-12
Rehabilitation Engineering Research Center on Wearable Robots for Independent Living ...5-14
Rehabilitation Research and Training Center: Individual-Level Characteristics Related to Employment Among Individuals with Disabilities ..............................................1-11
Self-Generation of Prospective Memory in TBI ..............................................8-11
The Development of a Virtual Reality Program to Improve Executive Functioning in Individuals with TBI .........................5-36
Treating Cognitive Deficits in Traumatic Spinal Cord Injury (SCI): A Randomized Clinical Trial .........................3-81

Treating Hidden Barriers to Employment: Integrated Treatment for PTSD in Supported Employment ........................................1-32

New York
Audio-Tactile Web Accessibility with Haptic Gloves ........................................5-38
Center for International Rehabilitation Research Information & Exchange (CIRRIE-3) ........................................6-8
Center on Knowledge Translation for Technology Transfer ........................................6-7
Examining Determinants of Community Participation Among Persons with Psychiatric Disabilities .........................2-36
Getting and Keeping People with Disabilities in the Workforce: Negotiating Work, Life, and Disability .............1-34
Mount Sinai Spinal Cord Injury Model Systems ..................................................3-43
New York Traumatic Brain Injury Model System (NY-TBI-MS) .....................3-58
Northeast ADA National Network Regional Center - Region II .....................7-4
RERC on Universal Design and the Built Environment ........................................5-17
RERC on Universal Design in the Built Environment ........................................5-15
Rusk Advanced Rehabilitation Research Training Postdoctoral Fellowship .......................8-30
Rusk Rehabilitation Traumatic Brain Injury Model System of Care at NYU ........3-59
Semantics-Aware Web Screen-Reading Assistant ........................................5-59
Southeast ADA National Network Regional Center - Region IV .....................7-7
The Community for All Project to Develop a Series of Six Online Toolkits to Improve Community Living and Participation for People with Intellectual and Developmental Disabilities .........................2-22
The Diversity Partners Intervention: Moving the Disability Employment Needle Through Value Added Relationships Between Talent Acquisition Providers and the Business Community ........................................1-19
Understanding and Increasing Supported Decision-Making's Positive Impact on Community Living and Participation Outcomes .......................................................... 2-23

North Carolina
A Socket-Suspension Monitoring System for Lower Limb Amputees with Roll-on Liners ........................................... 5-51
Indoor Navigation Aid for Individuals with Visual Impairments in Unfamiliar Spaces .......... 5-52
Interactive E-Learning to Promote Successful Postsecondary Employment Outcomes for Students with Intellectual Disabilities .......................................... 5-60
LiveWell - The Information and Communication Technology Rehabilitation Engineering Research Center for Community Living, Health, and Function .......... 5-19

Ohio
Central Ohio Regional SCI Model Systems (CORS CIS) .................................................. 3-45
Evaluating the Effectiveness of Online, Portal-Based Vocational Rehabilitation Services ........................................... 1-35
Improving Outcomes Using Aided Augmentative and Alternative Communication for Children who are Deaf or Hard of Hearing ........................................ 2-38
Northeast Ohio Regional Spinal Cord Injury Model System ........................................... 3-44
Ohio Regional Traumatic Brain Injury Model System ........................................... 3-60
Project CAREER: Development of an Interprofessional Demonstration to Support the Transition of Students with Traumatic Brain Injuries from Postsecondary Education to Employment ........................................... 1-21
Rehabilitation Research and Training Center on Interventions for Children and Youth with TBI ........................................... 3-8
SPAN - A Tool for Social Participation and Navigation ........................................... 2-37
Translate and Adapt VR Assessment Tools into ASL ........................................... 1-20

Oklahoma
Advanced Rehabilitation Research Training Project at the Langston University Rehabilitation Research and Training Center (LU-RRTC) on Research and Capacity Building for Minority Entities .......... 8-31
Langston University Rehabilitation Research and Training Center on Research and Capacity Building for Minority Entities .......... 8-3

Oregon
In the Classroom: Supporting Students with TBI ........................................... 2-39
Internet Safer and Stronger Program for Men with Disabilities (Men's SSP) ......... 2-41
MyLife: Development of a Cloud-Based Transition ePortfolio for Individuals with Cognitive Disabilities ........................................... 5-39
Our Lives: Safe and Strong Program Toolkit ........................................... 2-42
Physiologically Compatible Hemodialysis Through Advanced Dialysate Regeneration .... 5-61
Project EF: Executive Function in Infants and Toddlers Born Low Birth Weight and Preterm ........................................... 3-84
Research and Training Center for Pathways to Positive Futures: Building Self-Determination and Community Living and Participation ........................................... 2-13
TBITutor: An Intelligent Tutoring System to Improve Educational Outcomes in Youth with TBI ........................................... 3-83
Traumatic Brain Injury (TBI) Trainer Skill Builder ........................................... 2-40

Pennsylvania
ARRT - Career Advancement for Engineers in the Science of Rehabilitation .................. 8-33
Collaboration on Mobility Training (COMIT) ........................................... 3-17
Development of a Pneumatic Power Assist Wheelchair (PneuPAW) ............. 8-6

Projects by State
Disability and Rehabilitation Research Project on Inclusive Cloud and Web Computing ........................................5-27
Dynamic Supported Mobility for Infants and Toddlers with Cerebral Palsy .................................................3-85
Identifying Enabling Environments Affecting Adults with Psychiatric Disabilities ......................................2-44
Increasing Community Participation in Adults with Schizophrenia ..............................................................2-43
Innovation in Disability Empowerment and Service Delivery .................................................................3-19
Promoting Independence and Self-Management Using mHealth ............................................................3-18
Regional Spinal Cord Injury Center of the Delaware Valley .......................................................................3-46
Rehabilitation Engineering Research Center (RERC): From Cloud to Smartphone – Accessible and Empowering ICT .................................................................5-22
Rehabilitation Engineering Research Center on Augmentative and Alternative Communication (The RERC on AAC) .................................................................5-23
Rehabilitation Engineering Research Center on Physical Access and Transportation ...............................5-21
Rehabilomics: Revolutionizing 21st Century TBI Care and Research .........................................................3-62
Self-Management Assistance Through Technology (SMART) - Virtual Coaches for Wheelchair Users ...............5-28
Temple University Rehabilitation Research and Training Center on Community Living and Participation of Individuals with Psychiatric Disabilities .........................................................2-15
The Moss Traumatic Brain Injury Model System .......................................................................................3-61
Translating Transfer Training and Wheelchair Maintenance into Practice .......................................................6-9
University of Pittsburgh Model Center on Spinal Cord Injury ..................................................................3-47
University of Pittsburgh Model Center on Spinal Cord Injury ...............................................................3-48

South Carolina
A Multidisciplinary Approach to Translating New Knowledge into Practice to Promote Health and Well-Being after Spinal Cord Injury ..............................................................................3-20
Aging and Spinal Cord Injury:
A 45-Year Longitudinal Study .................................................3-88
Number, Primary, and Secondary Diagnoses, and Costs of Inpatient Hospitalizations in a Population-Based Cohort of People with Spinal Cord Injury .........................................................3-89
Prevalence of Chronic Disease After Spinal Cord Injury: A Longitudinal Study .............................................3-86
Rehabilitation Research and Training Center on Secondary Conditions in Individuals with SCI .........................3-9
Risk of Early Mortality After Spinal Cord Injury .........................................................................................3-87
Successful Employment and Quality Work Life After Severe Disability Due to Spinal Cord Injury .................1-22

Texas
ADA Participation Action Research Consortium .........................................................................................7-20
Center on Knowledge Translation for Employment Research ........................................................................6-11
Health and Function:
Advanced Rehabilitation Research Training (ARRT) at UTEP ........................................................................8-34
Interdisciplinary Rehabilitation Research Training Program ........................................................................8-35
Modulation of Catabolism Mediated by Catecholamine in Severely Burned Children: Analysis of Outcomes at Hospital Discharge, 6 Months, 1, 2, 5, 10, 15 and 20 Years Post-Injury ..............................................................................3-24
Multicenter Evaluation of Memory Remediation After Traumatic Brain Injury with Donepezil (MEMRI-TBI-D) ........................................................................................................3-21
North Texas Burn Rehabilitation Model System (NTBRMS) .........................................................................3-23
North Texas Traumatic Brain Injury Model System ....................................................................................3-63
Project WOWii: Developing and Testing a Web-Based Intervention to Promote Exercise Among Those with Spinal Cord Injury ..............................................................................3-90
Readmission and Disability Outcomes Related to Post Acute Care ..........................................................3-91
SEDL's Center on Knowledge Translation for Disability and Rehabilitation Research ........................................6-10
Southwest ADA National Network
Regional Center - Region VI ..........................7-12
Southwest ADA National Network
Regional Center - Region VI ..........................7-13
Texas Model Spinal Cord Injury System .............3-49
Texas TBI Model System of TIRR ......................3-64
The Relations Among Pain, Depression, and Resilience and their Prediction of Life Satisfaction in Men and Women with Spinal Cord Injury ..................................................3-92

Utah
Energy Management System for Battery Powered Mobility Devices Based on Wireless Power Transfer Concept to Promote Community Living and Participation ..........5-40

Virginia
A Cultural Family Intervention after Brain Injury (CFiaBI) for African Americans ........8-14
AbleData .........................................................6-23
Advanced Rehabilitation Research Training Projects .........................................................8-36
Effects of Customized Employment on the Employment Outcomes of Transition-Age Youth with Disabilities: A Randomized Clinical Trial ..................1-25
Facilitating Employment for Youth with Autism: A Replication Study of an Internship Model to Identify Evidence Based Practices .........................1-23
Rehabilitation Research and Training Center on Employment of Individuals with Physical Disabilities .................................................1-12
Research and Training Center (VCU-RRTC) on Employer Practices Leading to Successful Employment Outcomes for Individuals with Disabilities .........................................1-13
Virginia Commonwealth Traumatic Brain Injury Model System ..................................3-65

### Projects by Program Type

- Advanced Rehabilitation Research Training in Pediatric Mobility for Physicians and Engineers .......................................................... 8-39
- Advanced Rehabilitation Research Training in Rehabilitation Research Policy (UW-ARRT-RP) .......................................................... 8-38
- Advanced Rehabilitation Research Training Program on Health and Functioning of People with Disabilities .................. 8-28
- Advanced Rehabilitation Research Training Project (ARRT) .......................................................... 8-18
- Advanced Rehabilitation Research Training Project at the Langston University Rehabilitation Research and Training Center (LU-RRTC) on Research and Capacity Building for Minority Entities .......................................................... 8-31
- Advanced Rehabilitation Research Training Projects .................................................................................................................. 8-36
- Advanced Rehabilitation Research Training: Interventions for Neurologic Communication Disorders .......................................................... 8-21
- Advanced Research Training Program in Employment and Vocational Rehabilitation of Persons with Psychiatric Disabilities .......................................................... 8-27
- Advanced Training in Translational and Engaged-Scholarship to Improve Community Living and Participation of People with Disabilities .......................................................... 8-23
- Advanced Training in Translational and Transformational Research to Improve Outcomes for People with Disabilities .................................................................................................................. 8-19
- Advanced Training on Outcomes in Rehabilitation Research (UW-ATORR) .................................................................................................................. 8-37
- ARRT - Career Advancement for Engineers in the Science of Rehabilitation .................................................................................................................. 8-33
- Health and Function: Advanced Rehabilitation Research Training (ARRT) at UTEP .................................................................................................................. 8-34
- Interdisciplinary Rehabilitation Research Training Program.................................................................................................................. 8-35
- Northwestern University Advanced Rehabilitation Research Training (ARRT) Program .................................................................................................................. 8-22
- Post-Doctoral Training in Rehabilitation Outcomes Measurement Research .................................................................................................................. 8-26
Rehabilitation Sciences for Engineers and Basic Scientists:
An Advanced Training Program ..................8-20
Rehabilitation Sciences for Engineers and Basic Scientists:
An Advanced Training Program ..................8-24
Rusk Advanced Rehabilitation Research Training Postdoctoral Fellowship ........8-30
The University of Michigan Advanced Rehabilitation Research Training Program in Community Living and Participation ....8-29
University of Maryland Advanced Neuromotor Rehabilitation Research Training (UMANRRT) ..................8-25

**Burn Injury Model Systems**

Boston-Harvard Burn Injury Model System ..................................................3-22
Modulation of Catabolism Mediated by Catecholamine in Severely Burned Children: Analysis of Outcomes at Hospital Discharge, 6 Months, 1, 2, 5, 10, 15 and 20 Years Post-Injury ...........................................3-24
National Data and Statistical Center for the Burn Model Systems .....................6-13
North Texas Burn Rehabilitation Model System (NTBRMS) .............................3-23
Northwest Regional Burn Model System Center .............................................3-25

**Disability and Rehabilitation Research Projects**

A Lifestyle Intervention Targeting Enhanced Health and Function for Persons with Chronic SCI in Caregiver/Care-Receiver Relationships: Effects of Caregiver Co-Treatment ........................................3-13
A Multidisciplinary Approach to Translating New Knowledge into Practice to Promote Health and Well-Being after Spinal Cord Injury ........................................3-20
Center for International Rehabilitation Research Information & Exchange (CIRRIE-3) .................................................6-8
Center on Knowledge Translation for Employment Research ..........................6-11
Center on Knowledge Translation for Technology Transfer .............................6-7
Collaboration on Mobility Training (COMIT) .................................................3-17
Collaborative on Health Reform and Independent Living .................................2-24
Development Center to Enhance Evidence-Based Supportive Employment with a Technology-Based Management System ...........................................1-17
Disability and Rehabilitation Research Project on Inclusive Cloud and Web Computing .................................................5-27
Dose-Response Effects of Transformative Exercise in Improving Health and Function in Adults with Spinal Cord Injury and Multiple Sclerosis ........................................3-12
DRRP on Universal Design Practices to Enhance Work Outcomes ......................1-14
Effects of Customized Employment on the Employment Outcomes of Transition-Age Youth with Disabilities: A Randomized Clinical Trial ................................1-25
Enhancing the Community Living and Participation of Individuals with Psychiatric Disabilities ........................................2-20
Evaluating the Impact of a School-to-Work Collaborative on the Employment Outcomes of Transition-Aged Youth ..................1-15
Facilitating Employment for Youth with Autism: A Replication Study of an Internship Model to Identify Evidence Based Practices ................................1-23
Families with Disabilities Through the Life Cycle: Disability Culture Perspectives ........................................2-16
I-CONNECT PLUS: Enhancing Community Participation for Adolescents and Adults with ASD Using Online Instruction, Coaching, and Accessible Self-Management Technologies ..................................2-17
Innovation in Disability Empowerment and Service Delivery ................................3-19
Integrated Scaling Approach: A Model for Large Scale Implementation of Effective Interventions for Employment ..........1-16

Pre-Employment Transition Services (PETS) for Young Adults with Disabilities 8-15
Processing Speed Deficits in Multiple Sclerosis: Exploring the Complex Sensorial Cognitive Motor Interaction 8-12
Promoting Community-Based Physical Activity Early Post-Stroke: An Adaptation of the 14-Weeks to a Healthier You Program 8-10
Self-Generation of Prospective Memory in TBI 8-11
The Refined Health Action Process Approach for Physical Activity Self-Regulation in People with MS 8-8
Workers with Psychiatric Disabilities and Self-Employment Through Microenterprise 8-7

Field Initiated Projects (FIPs)

Access to Success: Replication and Impact of a Training Program Supporting Post-Secondary Students in Requesting Disability Accommodations 2-27
Aging and Spinal Cord Injury: A 45-Year Longitudinal Study 3-88
ALIGN v.2.0: Identification and Quantification of Real-Time Barriers to Community Mobility 5-31
Assessing Family Employment Awareness Training (FEAT) 1-30
Assistive Software Knowledgebase for Computers and Mobile Devices 1-28
Audio-Tactile Web Accessibility with Haptic Gloves 5-38
Community-Based Non-Work: Developing Research-Based Guidance for States and Service Providers 2-30
Cooperative Learning and Individualized Mentoring to Build Self-Efficacy, Persistence, and Goal Attainment in Postsecondary African American Students 2-28
Customized Employment for Individuals with Serious Psychiatric Disabilities 1-26
Development of a Multi-Faceted Software Evaluation for Home Reintegration: There's an App for That? 5-44

Development of a Passive Prosthetic Ankle with Energy Return that Matches that of a Natural Ankle 5-42
Development of a Urinary Symptom Measurement Instrument 3-71
Dynamic Supported Mobility for Infants and Toddlers with Cerebral Palsy 3-85
Effect of Guidance Surfaces on Travelers with Vision and Mobility Impairments 5-34
Effort Capacity and Choice: Investigating a Dynamic Model of Participation 2-35
Energy Management System for Battery Powered Mobility Devices Based on Wireless Power Transfer Concept to Promote Community Living and Participation 5-40
Evaluating the Effectiveness of CareProfiler Post-Hire System for Staff Supporting People with Disabilities and Age-Related Needs: Cluster Randomized Trial 1-31
Evaluating the Effectiveness of Online, Portal-Based Vocational Rehabilitation Services 1-35
Evaluating the Impact of Employment Services in Supportive Housing 1-33
Evaluation of "Project TEAM (Teens making Environmental and Activity Modifications)" : Effectiveness, Social Validity, and Feasibility 2-29
Examining Determinants of Community Participation Among Persons with Psychiatric Disabilities 2-36
Examining Determinants of Negative Attribution Bias in People with Traumatic Brain Injury 3-76
Getting and Keeping People with Disabilities in the Workforce: Negotiating Work, Life, and Disability 1-34
Identifying Enabling Environments Affecting Adults with Psychiatric Disabilities 2-44
Image Categorization Expert System to Facilitate Creation of Accessible Education Materials 5-41
Improving Outcomes Using Aided Augmentative and Alternative Communication for Children who are Deaf or Hard of Hearing ........................................... 2-38
Improving Quality of Personal Care Assistance Services for People with SCI Through Online Education ................. 3-82
In the Classroom:
Supporting Students with TBI ........................................ 2-39
Increasing Community Participation Among Adults with Psychiatric Disabilities Through Intentional Peer Support ........................................... 2-32
Increasing Community Participation in Adults with Schizophrenia .......................................................... 2-43
Integrated Program to Improve Competitive Employment in Dually Diagnosed Clients .................................................. 1-27
Internet Safer and Stronger Program for Men with Disabilities (Men's SSP) ....................................................... 2-41
Interpreting COPD Dyspnea Change: Sensitivity, Responsive, and Predictive Validity of the DMQ-CAT ........................................... 3-73
Intervention to Promote Goal-Directed Behavior in Infants with Down Syndrome ........................................... 3-70
Investigating Performance Indicators in Accessible and Inclusive Public Transportation ........................................... 5-32
Mobile Accommodation Tool: Development, Implementation, and Evaluation ...................................................... 1-36
Motivational Interviewing and Physical Activity Change in Parkinson's Disease ....................................................... 3-74
MyLife: Development of a Cloud-Based Transition ePortfolio for Individuals with Cognitive Disabilities ........................................... 5-39
National Core Indicators:
Advance Exploration of Factors Affecting Quality of Life Outcomes of Adults with Intellectual Disabilities .......................................................... 2-33
Number, Primary, and Secondary Diagnoses, and Costs of Inpatient Hospitalizations in a Population-Based Cohort of People with Spinal Cord Injury ...................................................... 3-89
Optimal Augmentative and Alternative Communication Technology for Individuals with Severe Communication Disabilities: Development of a Comprehensive Assessment Protocol ........................................... 5-43
Our Lives: Safe and Strong Program Toolkit .......................................................... 2-42
Parents Taking Action:
A Parent Training Intervention for Latino Immigrant Families ....................................................... 2-26
Partnering with People with Intellectual Disabilities to Address Violence ...................................................... 2-34
Patient-Specific In-Shoe Orthoses for Knee OA Prescribed Using Weight Bearing MRI ....................................................... 5-37
Personalized Medicine for Pressure Ulcer Prevention: Clinical Measures of Buttocks Deformation ........................................... 3-72
Prevalence of Chronic Disease After Spinal Cord Injury: A Longitudinal Study ...................................................... 3-86
Prevention of Long-Term Consequences of Mild Traumatic Brain Injury ....................................................... 3-80
PRIDE (Partners of Refugees in Illinois Disability Employment) ...................................................... 1-29
Prognostic Indicators for Reading in Pediatric Vision Impairment ........................................... 3-67
Project EF: Executive Function in Infants and Toddlers Born Low Birth Weight and Preterm ...................................................... 3-84
Project WOWii: Developing and Testing a Web-Based Intervention to Promote Exercise Among Those with Spinal Cord Injury ........................................... 3-90
Prosody and Voice Characteristics of Children with Cochlear Implants ...................................................... 5-29
Readmission and Disability Outcomes Related to Post Acute Care ...................................................... 3-91
Recovery 4 US - Development of a Photovoice-Based Social Media Program to Enhance the Community Participation and Recovery of Individuals with Psychiatric Disabilities ........................................... 2-31
Risk of Early Mortality After Spinal Cord Injury .......................................................... 3-87
Safe@Home: A Self-Management Program for Individuals with Traumatic Brain Injury and Their Families ........................................... 2-25
SPAN - A Tool for Social Participation and Navigation .................................................. 2-37
Take Charge of Burn Pain: A Randomized Controlled Trial of a Web-Based Self-Management Intervention to Improve Burn Pain Outcomes .................................................. 3-77
Targeting Sedentary Behavior Reduction in Adults with Cerebral Palsy Using a Real-Time Behavioral Intervention .......................................................... 3-79
TBITutor: An Intelligent Tutoring System to Improve Educational Outcomes in Youth with TBI .......................................................... 3-83
The Development of a Virtual Reality Program to Improve Executive Functioning in Individuals with TBI .......................................................... 5-36
The Disability, Rehabilitation, Engineering Access for Minorities (DREAM) project .......................................................... 3-68
The Menopause Transition in Women with Traumatic Brain Injury .......................................................... 3-78
The Relations Among Pain, Depression, and Resilience and their Prediction of Life Satisfaction in Men and Women with Spinal Cord Injury .......................................................... 3-92
Traumatic Brain Injury (TBI) Trainer Skill Builder .......................................................... 2-40
Treating Cognitive Deficits in Traumatic Spinal Cord Injury (SCI): A Randomized Clinical Trial .......................................................... 3-81
Treating Hidden Barriers to Employment: Integrated Treatment for PTSD in Supported Employment .......................................................... 1-32
Virtual Home Modifications Education Assistant (VHMEA) for Educators, Students, and Consumers .......................................................... 5-30
Visual Gaze and Validity of Cognitive Evaluations .......................................................... 5-33
Walking and its Effect on Health and Function in Individuals with Cerebral Palsy as they Transition to Adulthood: A Health Outcomes Study .......................................................... 3-69
Weight Management and Wellness for People with Psychiatric Disabilities .......................................................... 3-75
WorkingWell: Developing a Mobile Employment Support Tool for Individuals with Psychiatric Disabilities .......................................................... 5-35

**NIDILRR Contracts**

AbleData .......................................................... 6-23
National Rehabilitation Information Center (NARIC) .......................................................... 6-22

**Rehabilitation Engineering Research Centers (RERCs)**

Interactive Exercise Technologies and Exercise Physiology for People with Disabilities .......................................................... 5-3
LiveWell - The Information and Communication Technology Rehabilitation Engineering Research Center for Community Living, Health, and Function .......................................................... 5-19
Machines Assisting Recovery from Stroke and Spinal Cord Injury for Reintegration into Society (MARS3) .......................................................... 5-10
Rehabilitation Engineering Research Center (RERC):
From Cloud to Smartphone – Accessible and Empowering ICT .......................................................... 5-22
Rehabilitation Engineering Research Center for Advancing Cognitive Technologies (RERC-ACT) .......................................................... 5-5
Rehabilitation Engineering Research Center for Wireless Inclusive Technologies .......................................................... 5-9
Rehabilitation Engineering Research Center on Augmentative and Alternative Communication (The RERC on AAC) .......................................................... 5-23
Rehabilitation Engineering Research Center on Physical Access and Transportation .......................................................... 5-21
Rehabilitation Engineering Research Center on Technologies for Children with Orthopedic Disabilities .......................................................... 5-26
Rehabilitation Engineering Research Center on Technologies to Support Successful Aging with Disability (RERC TechSAge) .......................................................... 5-7
Rehabilitation Engineering Research Center on Timing Investigation Dosage Implementation (TIDI) .......................................................... 5-11
Rehabilitation Engineering Research Center on Universal Interface and Information Technology Access .......................................................... 5-24

Projects by Program Type

D-8
Rehabilitation Engineering Research Center on Wearable Robots for Independent Living ..............................................................5-14
Rehabilitation Engineering Research Center: Develop and Evaluate Rehabilitation Technology and Methods for Individuals with Low Vision, Blindness, and Multiple Disabilities ..............................................................5-4
RERC on Improving the Accessibility, Usability, and Performance of Technology for Individuals who are Deaf or Hard of Hearing (DHH-RERC) ..............................................................5-6
RERC on Universal Design and the Built Environment ..............................................................5-17
RERC on Universal Design in the Built Environment ..............................................................5-15
Technologies to Evaluate and Advance Mobility and Manipulation (TEAMM) Rehabilitation Engineering Research Center ..............................................................5-12
Technology Increasing Knowledge: Technology Optimizing Choice (TIKTOC) Rehabilitation Engineering Research Center (RERC) ..............................................................5-13

Rehabilitation Research and Training Centers (RRTCs)

Employment for Individuals with Blindness or Other Visual Impairments ..............................................................1-8
ENhancing ACTivity and Participation for Persons with Arthritis (ENACT) ..............................................................2-7
Langston University Rehabilitation Research and Training Center on Research and Capacity Building for Minority Entities ..............8-3
Rehabilitation Research and Training Center (RRTC) on Family Support ..............................................................2-4
Rehabilitation Research and Training Center on Advancing Employment for Individuals with Intellectual and Developmental Disabilities ..............................................................1-5
Rehabilitation Research and Training Center on Community Living ..............................................................2-5
Rehabilitation Research and Training Center on Community Living Policy ..............................................................2-3
Rehabilitation Research and Training Center on Developmental Disabilities and Health ..............................................................3-4
Rehabilitation Research and Training Center on Disability in Rural Communities ..............................................................2-11
Rehabilitation Research and Training Center on Disability Statistics and Demographics (StatsRRTC) ..............................................................4-3
Rehabilitation Research and Training Center on Employment of Individuals with Physical Disabilities ..............................................................1-12
Rehabilitation Research and Training Center on Employment Policy and Measurement ..............................................................1-10
Rehabilitation Research and Training Center on Home and Community Based Services Outcomes Measurement ..............................................................2-10
Rehabilitation Research and Training Center on Improving Employment Outcomes for Individuals with Psychiatric Disabilities ..............................................................1-6
Rehabilitation Research and Training Center on Interventions for Children and Youth with TBI ..............................................................3-8
Rehabilitation Research and Training Center on Promoting Interventions for Community Living (RRTC/PICL) ..............................................................2-6
Rehabilitation Research and Training Center on Secondary Conditions in Individuals with SCI ..............................................................3-9
Rehabilitation Research and Training Center on Self-Directed Recovery and Integrated Health Care ..............................................................3-6
Rehabilitation Research and Training Center: Individual-Level Characteristics Related to Employment Among Individuals with Disabilities ..............................................................1-11
Research and Training Center (VCU-RRTC) on Employer Practices Leading to Successful Employment Outcomes for Individuals with Disabilities ..............................................................1-13
Research and Training Center for Pathways to Positive Futures: Building Self-Determination and Community Living and Participation ..............................................................2-13
Research and Training Center on Community Living for People with Intellectual Disabilities ..............................................................2-9

Projects by Program Type

D-9
RRTC on Developing Optimal Strategies in Exercise and Survival Skills to Increase Health and Function............................3-5
RRTC on Psychiatric Disability and Co-Occurring Medical Conditions................3-3
RRTC on VR Practices for Youth and Young Adults....................................................1-3
Temple University Rehabilitation Research and Training Center on Community Living and Participation of Individuals with Psychiatric Disabilities.................................2-15
The Learning and Working During the Transition to Adulthood Rehabilitation Research and Training Center....................1-7
University of Washington Rehabilitation Research and Training Center on Promoting Healthy Aging for Individuals with Long-Term Physical Disabilities........................3-11
Vocational Rehabilitation and Developing Strategies to Meet Employer Needs in Changing Economic Environments.............1-4

Small Business Innovation Research (SBIR), Phase I

A Socket-Suspension Monitoring System for Lower Limb Amputees with Roll-on Liners ..........................................................5-51
Anxiety Coach for Children: A Tool to Increase Community and Educational Participation.........................................................2-46
Crowdsourced English to ASL Translation Environment.................................5-47
Digital Aided Descriptions (DAD): Encouraging Learning Among Children with Visual Disabilities Through Creativity and Dialogue..........................................................5-48
Enhancing Quality of Life for Disabled Patients via High Humidified Flow Portable Oxygen System..............................................5-46
Improving Rehabilitation and Reducing Re-Occurrence of Diabetic Foot Ulcers by Shifting Plantar Pressure with Exo-Tendon and Exo-Skeletal Footwear Systems........5-45
Indoor Navigation Aid for Individuals with Visual Impairments in Unfamiliar Spaces .....5-52

memBRAIN: A Non-Invasive Safety Net that Safeguards Young Adults with Autism Transitioning to Independent Living........2-45
SoundFit Ultrasonic Performance Diagnostic for Lower-Body Prostheses ....5-50
WhenWear Advisor: A Cloud-Based Tool to Help Supervisors Increase Employment Options for Workers with Intellectual Disabilities..........................5-49

Small Business Innovation Research (SBIR), Phase II

Accessible Environmental Information Application for Individuals with Visual Impairments .........................5-53
Development and Evaluation of the Online and Applied System for Intervention Skills.................................................2-47
Development of a Wearable Robot for Motor Rehabilitation in Acute Stroke..............................3-93
Embedded Access to Signing of Science Terms and Definitions........................................5-54
HomePortal – A Universal Home Environment for Individuals who are Blind or Have Visual Impairments................5-55
Interactive E-Learning to Promote Successful Postsecondary Employment Outcomes for Students with Intellectual Disabilities ........................................5-60
Physiologically Compatible Hemodialysis Through Advanced Dialysate Regeneration ....................5-61
Semantics-Aware Web Screen-Reading Assistant................................................................5-59
The Intelligent Brace: A Compliance Monitoring System for Scoliosis ............................5-56
Therapeutic Intermittent Compression Socket........................................................................5-57
Wheelchair Optimal Route Planning for Public Urban and Indoor Spaces..................5-58
Spinal Cord Injury Model Systems

Central Ohio Regional SCI Model Systems (CORSCIS) .....................................................3-45
Midwest Regional Spinal Cord Injury Care System (MRSCIS) ..................................................3-34
Midwest Regional Spinal Cord Injury Model System (MRSCIS) ..................................................3-35
Mount Sinai Spinal Cord Injury Model Systems .................................................................3-43
National Spinal Cord Injury Statistical Center .................................................................6-14
National Spinal Cord Injury Statistical Center .................................................................6-15
NERSCIC: Improving the Lives of People with SCI Across the Lifespan Through Innovative Science and Technology ..........................................................3-36
Northeast Ohio Regional Spinal Cord Injury Model System ..............................................3-44
Northern New Jersey Spinal Cord Injury System .................................................................3-41
Northern New Jersey Spinal Cord Injury System .................................................................3-42
Northwest Regional Spinal Cord Injury System .................................................................3-50
Regional Spinal Cord Injury Center of the Delaware Valley .............................................3-46
South Florida Spinal Cord Injury Model System .................................................................3-31
Southeastern Regional Spinal Cord Injury Model System (SR-SCIMS) ..................................3-33
Southeastern Regional Spinal Cord Injury Model System at Shepherd Center ....................3-32
Southern California Spinal Cord Injury Model System at Rancho Los Amigos .................3-28
Southern California Spinal Cord Injury Model System at Rancho Los Amigos National Rehabilitation Center .................................................................3-29
Spaulding Hospital-New England Regional Spinal Cord Injury Center .............................3-39
Spaulding-Harvard Spinal Cord Injury Model System .........................................................3-38
Texas Model Spinal Cord Injury System ..........................................................................3-49
The Rocky Mountain Regional Spinal Injury System (RMRSIS) ........................................3-30

The University of Alabama at Birmingham Spinal Cord Injury Model System of Care ........3-27
UAB Spinal Cord Injury Model System .............................................................................3-26
University of Michigan Spinal Cord Injury Model System .................................................3-40
University of Pittsburgh Model Center on Spinal Cord Injury ...........................................3-47
University of Pittsburgh Model Center on Spinal Cord Injury ...........................................3-48

Traumatic Brain Injury Model Systems

Brain Research in Aggression and Irritability Network (BRAIN):
Building Evidence-Based Approaches to Managing Traumatic Brain Injury .........................3-54
Mayo Clinic Traumatic Brain Injury Model System .................................................................3-56
New York Traumatic Brain Injury Model System (NY-TBI-MS) ............................................3-58
North Texas Traumatic Brain Injury Model System .................................................................3-63
Northern New Jersey Traumatic Brain Injury System (NNJTBIS) ........................................3-57
Ohio Regional Traumatic Brain Injury Model System ............................................................3-60
Rehabilomics: Revolutionizing 21st Century TBI Care and Research ..................................3-62
Rusk Rehabilitation Traumatic Brain Injury Model System of Care at NYU .........................3-59
South Florida Traumatic Brain Injury Model System (SF-TBIMS) .........................................3-53
Spaulding-Harvard Traumatic Brain Injury Model System ....................................................3-55
Texas TBI Model System of TIRR .......................................................................................3-64
The Moss Traumatic Brain Injury Model System .................................................................3-61
The Rocky Mountain Regional Brain Injury Model System (RMRBIMS) .........................3-52
Traumatic Brain Injury Model Systems National Data and Statistical Center .......................6-16
UAB Traumatic Brain Injury Model System ........................................................................3-51
University of Washington Traumatic Brain Injury Model System (UWTBIMS) .................3-66
Virginia Commonwealth Traumatic Brain Injury Model System ........................................3-65

Projects by Program Type

D-11
Model System and Collaborative Projects
Burn Injury Model Systems
Boston-Harvard Burn Injury Model System ........................................ 3-22
North Texas Burn Rehabilitation Model System (NTBRMS) .................. 3-23
Northwest Regional Burn Model System ............................................. 3-25

Spinal Cord Injury Model Systems
Central Ohio Regional SCI Model Systems (CORSCIS) .......................... 3-45
Midwest Regional Spinal Cord Injury Care System (MRSCIS) .................. 3-34
